Gilmer, TX

Summary

Dynamic and results-oriented Lead Enterprise Architect with 11 years of experience in architecture leadership, solution oversight, and integration strategy. Proven track record in driving operational excellence and aligning business needs with technology solutions. Adept in stakeholder management, security governance, and fostering innovation through AI-first approaches. Committed to delivering high-quality, scalable architectures while mentoring teams towards architectural maturity.

Skills

Architecture Leadership: enterprise architecture, program architecture, decision governance

Solution Architecture: high-level design (HLD), low-level design (LLD), non-functional requirements (NFRs)

Integration Strategy: API patterns, data governance, system boundaries

Security Management: threat modeling, compliance, risk management

Operational Excellence: CI/CD, observability standards, incident readiness

Stakeholder Management: communication, mentoring, tradeoff analysis

AI Enablement: AI delivery in SDLC, guardrails, performance measurement

Professional Experience

Lead Enterprise Architect at General Digital Corporation (2019-04 - Present)

- Spearheaded architecture leadership initiatives, defining target-state architecture and ensuring adherence to architectural principles.
- Reviewed and approved high-level and low-level designs for major workflows, maintaining consistency across various teams.
- Collaborated with product owners and functional leadership to translate business requirements into architecture-relevant specifications.
- Established and enforced API and integration patterns, ensuring clear versioning and data ownership across systems.
- Developed security architecture guardrails and implemented a threat modeling approach to mitigate risks effectively.
- Set operational standards for CI/CD processes, enhancing release patterns and rollback strategies.
- Defined observability standards for logs, metrics, and traces, promoting incident readiness across teams.
- Chaired architecture working groups to align architects, tech leads, and stakeholders on critical architectural decisions.
- Mentored solution architects and senior engineers, fostering a culture of continuous improvement in architecture maturity.
- Communicated architectural decisions, rationales, and risk management strategies effectively to stakeholders.

Senior Solution Architect at Data Systems (2016-01 - 2019-01)

- Led the design and implementation of scalable architectures, ensuring robust performance and resiliency across applications.
- Reviewed key HLD and LLD documentation, providing guidance on maintaining architectural integrity and consistency.
- Drove the establishment of baseline templates for logging, tracing, and error handling in all major projects.
- Supported the shaping of Minimum Viable Products (MVP) in collaboration with product owners and functional teams.
- Facilitated clear decision-making processes by presenting tradeoffs and options to stakeholders during project planning.
- Defined data model evolution strategies and managed versioning and governance for critical data assets.
- Maintained a comprehensive architecture risk register, developing mitigation plans for identified risks.
- Implemented best practices for operational excellence through CI/CD strategies, ensuring high-quality deliverables.
- Promoted AI-first approaches in solution design, integrating AI technologies without compromising quality or security.
- Fostered effective communication among cross-functional teams, aligning efforts to meet business objectives.

Enterprise Architect at Covansys (2014-07 - 2015-07)

- Developed and executed enterprise architecture strategies, aligning IT and business goals to enhance operational efficiency.
- Conducted architectural reviews to ensure compliance with established guidelines and principles.
- Collaborated with various teams to define and document integration patterns, enhancing system interoperability.
- Assisted in the creation of non-functional requirements, ensuring they align with business objectives for performance and security.
- Engaged with stakeholders to assess requirements and define project scopes that align with architecture visions.
- Established a framework for data governance, ensuring data quality and compliance with regulatory standards.
- Implemented incident management protocols to improve response times and operational resilience.
- Provided mentorship to junior architects, enhancing team capabilities and knowledge sharing.
- Utilized cloud solutions and DevOps practices to streamline development and deployment processes.
- Presented architectural decisions and updates to executive stakeholders, ensuring transparency and alignment.

Education

Bachelor of Science in Computer Science - University of Texas at Austin (Aug 2014)

Relevant Coursework: Software Engineering • Database Management Systems • Network Security

Certifications

- Certified Enterprise Architect
- AWS Certified Solutions Architect
