+1(201 708-8568

Accomplished Senior Business Systems Analyst with 8 years of progressive experience in the healthcare and life science industries. Proficient within different SDLCs, including Waterfall, Scrum, Scaled Agile Framework (SAFe), and Waterfall-Scrum Hybrid. Skilled in analyzing healthcare workflows, implementing solutions for improved patient care, and integrating innovative technologies. A strategic thinker with a proven track record in merging healthcare knowledge with technological advancements. Ready to drive transformative changes, enhance patient outcomes, and contribute to the evolution of healthcare practices.

- Proficient in healthcare concepts and processes, demonstrating a comprehensive understanding of regulatory frameworks including HIPAA, GXP, COPPA, ACA, MHRA, GDPR, and FDA. Well-versed in the entire claims lifecycle, from initial entry to resolution, encompassing claim review, identification of issues, and adeptly crafting solutions to address claims processing.
- Demonstrates an extensive understanding of diverse systems utilized in healthcare, encompassing EHR, CTMS, EDC, POS, LIMS, PHI, and PII. Proficient in adhering to industry standards, including HL7 International Standards for secure healthcare data exchange and ICD-9, ICD-10, and ICD-11 (records and codes specific symptoms, diagnoses, & procedures in volumes 1, 2, 3).
- Thoroughly versed in FDA Regulations, including 21 CFR Part 11, 21 CFR Part 820, 21 CFR Part 211, and NX1, demonstrating a comprehensive grasp of the regulatory landscape governing healthcare, and life sciences industries(Pharmaceutical).
- Proficient in serving as a valuable bridge between Business and Technical Stakeholders, adept at eliciting both Functional and Non-functional requirements using elicitation techniques, including Interviews, Brainstorming, JAD sessions, Requirements Workshops, Survey/Questionnaires, Document Analysis, Reverse Engineering, Interface Analysis, and Focus Groups.
- Conducted a range of analytical studies, including Risk Analysis, Cost-Benefit Analysis, SWOT Analysis, and Impact Analysis, to comprehensively assess project requirements within the healthcare domain. Utilized GAP Analysis to evaluate the AS-IS and TO-BE business processes, enabling data-driven insights and the identification of opportunities for process enhancement.
- Created key artifacts such as Project Plan, Project Charter Business Requirements Document (BRD), System Requirements Specification (SRS), Functional Specification Document (FSD), Requirements Traceability Matrix (RTM), and RACI matrix.
- Contributed to the team's skill development by collaborating with the Project Manager in the creation of Work Breakdown Structures (WBS), Critical Path Analysis (CPA), Project Planning Charters, and Gantt charts within the specific context.
- Adept at following a rigorous Enterprise Change Management Plan. Experienced in dealing with conflicting requirements.
- Exemplary in the creation of Use Case Documents and Unified Modelling Language (UML) diagrams, including Use Case diagrams, Activity diagrams, and Sequence Diagrams, using specialized tools such as MS Visio and Lucid Chart.

- Extensive expertise in the Agile (Scrum) framework, including a deep understanding of Scrum Ceremonies such as Backlog Grooming, Sprint Planning, Daily Scrum, Sprint Review, and Sprint Retrospective. Proficiently managed and documented Scrum Artifacts, including Product Backlogs, Sprint Backlogs, and Information Radiators like Burn-up and Burn-down charts.
- Enabled efficient cooperation and alignment of business objectives by facilitating SAFe ceremonies, such as ART (Agile release train) activities including PI Planning, Daily standups, Iteration Planning, System Demos, and Iteration Review Sessions.
- Thoroughly assessed the Triple Constraints within projects - Scope, Time, and Resources to proactively prevent scope creep.
- Assisted the PO in requirements elaboration and prioritization and acted as a Proxy Product Owner when required.
- Proficient in decomposing Epics into User Stories aligned with the INVEST criteria. Skilled in employing Horizontal and Vertical Slicing Techniques to refine user stories, utilizing Prioritization methods such as MoSCoW and Kano to ensure effective task sequencing, and employing Estimation techniques including Planning Poker, T-shirt sizing, and Relative Mass Valuation.
- Played a pivotal role in collaborating with the Product Owner to delineate the Minimum Viable Product (MVP) and definition of Done (DoD), and streamline the refinement of Acceptance Criteria, thereby contributing significantly to project success.
- Adept at creating visual prototypes, including mock-ups and wireframes, using tools such as MS Visio and Balsamiq, to effectively communicate requirements to Business and technical stakeholders, thereby enhancing clarity and comprehension.
- Skillfully managed and resolved diverse conflicts that emerged throughout the healthcare development process by engaging in constructive negotiations with developers, testers, architects, SMEs, business users, and enterprise-level management.
- Developed Entity-Relationship Diagrams (ER) following a meticulous analysis of healthcare entities and their interrelationships, crafting both Conceptual and Logical Data Models and eliminating redundancy within the database. Identifying and resolving anomalies in the database design, highlighting the application of normalization techniques for effective anomaly mitigation.
- Explicit insight and knowledge of Data Warehouse Implementation, ETL/ELT process, Data Profiling, Data Integration, Data Mapping, Data Migration, and Data Modelling concepts with experience implementing Databases, ODS, Data Marts, Data Analysis, Data Integration, Schemas - Star/Snowflake, OLTP and OLAP operations like Drill Down, Roll Up, Slicing and Dicing.
- Demonstrated extensive hands-on expertise and a profound understanding of SQL queries encompassing operations like Joins, Selects, Views, Order by, Group by, Relations, Triggers, and Aggregate functions. Utilized these SQL capabilities for critical functions, including data validation, and verification, as well as for training and testing processes and ensured data integrity.
- Proficient in conducting comprehensive Application Program Interface (API) testing, employing industry-standard tools such as Postman, SoapUI, JMeter, Katalon Studio, and Swagger to assess API functionality and ensure accurate API documentation.
- Well-versed knowledge of System architecture concepts like 3-tier architecture and Service Oriented Architecture (SOA).

- Working knowledge of MySQL database, AWS Redshift Datawarehouse, AWS Health imaging, AWS S3, and AWS Sagemaker.
- Implemented various engineering practices, including Test-driven development (TDD), Acceptance Test Driven Development (ATDD), and Pair Programming (PP), to check the performance, efficiency, and overall quality of software solutions.
- Played an integral role in the development and documentation of essential Test Artifacts, encompassing Test Plans, Test Data, and Test Scripts. Proficient in Black Box testing methodologies and instrumental in the execution of critical testing phases, including Smoke Tests, Sanity Tests, and Regression Tests, ensuring the reliability and quality of healthcare software systems.
- Monitor and participate in both Feature Integration Testing (FIT) and System Integration Testing (SIT) executions, offering clear insights into business scenarios and anticipated system behavior. Document any deviations encountered between expected and observed outcomes, promptly escalating identified bugs and defects to the development team for resolution.
- Utilized Tableau and Power BI to craft visually engaging and informative reports, dashboards, and interactive data visualizations. Implemented data visualization best practices to eloquently convey discovered insights, trends, and patterns found within data.
- Proficient in validating code and documenting in Python, Java, YAML, and XML formats, with a deep understanding of tools such as JIRA, HP ALM, Confluence, MS Excel, Informatica PowerCenter, MuleSoft, Prezi, MS project, Spreadsheet, Tableau.

Work Experience

Product Owner/ Business System Analyst

Client: Pfizer - Tampa, FL

December 2021 to Present

This project aims to elevate sales and gather patient data amidst the challenge of limited patient accessibility. Engaging sales reps, GSK establishes connections with healthcare professionals (HCPs) via email, phone, and precision information zoning. The data was funneled into Veeva Compass from various sources like IQVIA with complexities. To address this, a system was developed to strong bonds with HCPs, tailored medication recommendations, and track HCPs' interests with email interactions.

Responsibilities:

- Evaluate and ensure that the project's systems, processes, and data handling mechanisms align with regulatory standards such as HIPAA, GDPR, GxP, HL7, FDA regulations, and other relevant compliance requirements and document them in BRD.
- carried out analytical studies, including impact, SWOT, cost-benefit, and risk analyses, thoroughly evaluate the project needs. Assessed the AS-IS and TO-BE business processes using GAP Analysis to find areas where the processes might be improved.
- Maintaining, uploading, and tracking all requirements, Approvals, and pending task in Jira, internal trackers and on SharePoint.
- Facilitated Scrum Ceremonies such as Backlog Grooming/Refinement, Sprint

Planning, Daily Standup, Sprint review meeting, and Sprint Retrospective. Defined a clear Definition of Ready (DOR) and definition of Done (DOD).

- Created scrum artifacts, like Product Backlog, Sprint Backlog, & Product Increment to drive transparency and prioritize work.

- Recognize and address potential data management risks, such as breaches or privacy concerns, by devising mitigation strategies. Implement change management strategies to ensure seamless transitions in addressing these pivotal risks.

- Tailor the Veeva Compass to meet specific business needs by setting up custom fields, objects, and workflows, and adjusting the user interface. Conduct training sessions to ensure users can make the most of Veeva compass features. Facilitate integration of data sources into Veeva Compass, ensure data accuracy, data consistency, and alignment for specific purposes

- Efficiently Supervise the merging of diverse data sources, including patient, sales, and marketing sources, into the centralized data warehouse. Guarantee smooth integration to develop complete and detailed profiles of healthcare professionals (HCPs) and segregate them according to HCP's interests. Collaborate extensively with Tech teams to deploy essential technologies like Salesforce CRM and marketing automation platforms, enabling efficient data management within the Centralized warehouse.

- Played a vital role in crafting integration strategies with development team using MuleSoft, considering system architecture, data flow, and business processes to establish smooth connections between systems. Outline data mapping and Extract-Transform-Load (ETL) rules to maintain data consistency and data compatibility among systems integrated through MuleSoft.

- Craft and refine SQL queries to efficiently retrieve, update, and manage database information, addressing performance issues to enhance system responsiveness. Develop SQL scripts to extract and transform data from sources into analysis formats.

- Collaborate with database administrators and development teams to design SQL databases that support the project's data storage needs. Ensure proper indexing, schema design, and normalization for efficient data retrieval and manipulation.

- Work closely with development teams to identify, devise, and deploy APIs enabling communication among various project systems (like Salesforce CRM and marketing automation platforms). Generate API documentation covering usage guidelines, endpoints, authentication methods, and data formats, alignment with established API design and development standards.

- Implement security measures such as authentication protocols, encryption, and access controls to protect APIs and the data they handle. Ensured compliance with data integrity, data consistency, data Accuracy as well as industry security standards.

- Participated in a variety of testing (e.g., unit, regression, alpha & beta testing, smoke testing, integration testing, black box testing) and recorded defects in JIRA for easy access by stakeholders to review. Worked with the quality assurance team to develop a thorough test plan, test scenarios, and test cases incorporating system-specific scenarios and edge cases.

- Conducted the User Acceptance Testing (UAT) to verify user interaction and check platform satisfies business requirements and validates its functioning; moreover, extensive test plans, test cases, and test scenarios covering situations were produced.

- Design and create interactive and visually appealing reports such as informative reports, analytical reports, and dashboards in Power BI that provide insights into HCP engagement, email journey performance, and product/service awareness.

- Leverage IQVIA's reporting capabilities to create more granular reports in Power BI. These reports can provide detailed analytics on prescription trends, geographical variations, and healthcare professional preferences, aiding to decision-making.

Environment: Agile-Scrum environment, Kanban, JIRA, python, IQVIA, FDA, GXP, Mulesoft, Veeva compass, salesforce CRM, designer, Power BI, Informatica, MS PowerPoint, MS Excel, MS Access, Oracle, MS SharePoint, MS SSIS, SmartCom,

Product Owner/ Sr. Business System Analyst

Montgomery - Montgomery, AL

September 2019 to August 2021

The project involves moving services from the outdated Amysis (legacy system) platform to the more advanced HRP system. This encompasses not only the transfer of data but also ensuring that the new system operates smoothly by validating processes and documenting procedures for its ongoing use and potential enhancements. Moreover, the implementation of SmartCom servers to enhance reporting capabilities and streamline communication channels with a variety of service providers.

Responsibilities:

- Performed and examined job responsibilities in alignment with HealthEdge's guidelines and protocols that regulate PHI, and PII.
- Collecting trigger conditions essential for configuration within HRP and communicating these specifics to the HRP development team (TPA). These details included requirements about template usage and scheduling for outgoing communications.
- Involved in complete SDLC life cycle of big data project that includes requirement analysis, design, coding, testing, production.
- Facilitated meetings among HRP, Claims, Finance, Web services, Correspondence, and development teams to gather requirements and address incomplete tasks, fostering a smoother transition. The focus was on optimizing outcomes, improving functionalities and transition, and organizing documentation, including minutes of meetings, and end-to-end requirements.
- Maintaining, uploading, and tracking all requirements, Approvals and pending task in Jira, internal trackers and on SharePoint.
- Actively engaged in Scrum Meetings/ Ceremonies such as Backlog Grooming/Refinement, Sprint Planning, Daily Scrum, Sprint Review, and Sprint Retrospective sessions. Artifacts, including Product Backlogs, Sprint Backlogs, and Information Radiators.
- Evaluate SmartCom servers' needs and facilitate seamless integration into new HRP system by working with technical teams.
- Design end-to-end business processes in the HRP system leveraging automation and optimized workflows. Document new processes and create training materials for users. Develop maintenance protocol and gather feedback from end users.
- HRP consists of a mechanism that initiates the transmission of letters to Smartcom. These letters are directed either to be printed as flat files or sent electronically as attachments to HRP for internal purposes and the Web Services/portal for external access.
- Mapped out system requirements, interfaces, and data flows between Amysis, HRP, and SmartCom. Created system design documents detailing the integration points and functionalities required for a successful migration and implementation.
- Developing and aiding in the creation of Smartcom templates that incorporate XML files containing data from HRP.
- Utilize SQL queries in Microsoft Access to validate data, understand and report according to the business needs, and develop solutions, closely monitoring and bridging the gap caused by backend process disparities between the legacy and new systems.

- Execute SQL queries to extract, transform, and load (ETL) data from the Amysis legacy system into the HRP system. This involves ensuring Source system exploration, data accuracy, integrity, and completeness throughout the migration process.
 - Performed bug tracking and preventing defects by employing the defect management life cycle within JIRA. This approach aimed to enhance the resolution of issues/bugs, update issue logs and continuously improve the system's performance.
 - Ensuring accurate data integration into templates and generating necessary reports and letters as per specifications across Dev, SIT, and UAT environments.
- This involved manual testing and effective communication and observation with the QA team.
- Engaged in UAT cycle by contributing to test scripts, evaluating the User Acceptance Test Plan (UATP), and walkthrough sessions.
 - Create compelling and insightful reports, dashboards, and visual representations using Power BI by integrating data from various sources, including the HRP system, to deliver comprehensive insights.
- Environment: Agile-Scrum environment, Kanban, JIRA, python, designer, Power BI, Informatica, MS PowerPoint, MS Excel, MS Access, Oracle, MS SharePoint, MS SSIS,

Sr. Business System Analyst

Health Edge Payer (HRP) Client: Canon Medical Systems USA, Inc. - Tustin, CA
July 2018 to September 2019

The challenges in medical imaging within healthcare, focus on the need for improved management, storage, and analysis of medical images. The shortage of radiologists compounds the problem, leading to delays and increased demand for specialized imaging services. The project proposes using AWS HealthImaging (AWS

AHI), Amazon SageMaker, and various AWS services to enhance medical imaging workflows. AI plays a crucial role in reducing radiologist workload and improving diagnostics.

Responsibilities:

- Work closely with healthcare professionals, including radiologists and clinicians, to understand their workflow requirements and refine the technical solutions accordingly as well as legal and compliance teams to ensure that implemented solution adheres to data privacy and security regulations, including HIPAA. Provide support in utilizing Different AWS components.
- Ensure project compliance with enterprise standards, legal, and audit requirements. Conduct comprehensive analyses, including requirement feasibility analysis, gap analysis, risk analysis, impact analysis, SWOT, and cost-benefit analysis.
- Collaborate with healthcare stakeholders, radiologists, and Tech teams to gather and analyze requirements for the implementation of AWS HealthImaging (AWS AHI) and Amazon SageMaker in the medical imaging workflows.
- Understand complex Healthcare Business models and help document the process flow diagrams, identify bottlenecks in Business Processes, offer solutions to mitigate downstream issues, and save revenue losses and enhance profit market area to clients.
- Enabled efficient cooperation and alignment of business objectives by facilitating SAFe ceremonies, such as ART (Agile release train) activities including PI Planning, Daily standups, Iteration Planning, System Demos, and Iteration Review Sessions.
- Responsible for Business Requirements gathering using Jira and Jira Align tool by authoring user stories, epics, understanding system gaps, facilitating discussion discussions with Business Stakeholders, and helping build system requirements documents.
- Equip the team with the skills to incorporate agile methodologies such as Test

Automation, CICD, TDD, pair programming, and Retrospectives, to achieve Definition of Ready and Definition of Done, while minimizing Technical Debts. Engage proactively in planning sessions to establish iterative plans, ensuring the collaborative efforts of the team consistently deliver value.

- Develop and Maintain Technical Product Roadmap and Backlog to capture the Business Themes, epics, and stories Collaborating with stakeholders to prioritize the highest impact work to be delivered first and update product backlog to enhance performance.

- Work closely with data scientists to create advanced deep learning models through Amazon SageMaker, focusing on annotated medical images. Apply machine learning solutions aimed at the detection and interpretation of medical images within AI-assisted workflows. Collaborated with the team in the development of Web

Applications and User Interfaces.

- Collaborate with testing teams to define test cases and validate the implemented solution meets the specified requirements.

- Configure and Set up AWS AHI services to handle DICOM image ingestion, storage, and metadata administration within Amazon S3 and the AWS AHI data store.

Additionally, deploy and arrange essential infrastructure elements like AWS IoT Greengrass, Amazon SQS message queues, AWS lambda, AWS S3, AWS Step Functions, and Amazon SageMaker endpoints.

- Worked on cloud computing with Amazon web services like AWS S3, AWS Lambda, AWS step function, & AWS IoT Greengrass.

- Detailed Create, Read, Update, and Delete (CRUD) documentation for the Medical Imaging API, including error handling, request/response formats, and endpoints.

Using tools such as Postman, also did rigorous API testing (test cases, test plans).

- carried out User Acceptance Testing (UAT) to confirm the operation of the imaging and reporting ran a sanity test with Selenium to verify that the system functions as intended. helped create a thorough test plan, test cases, and test scenarios. Maintained an RTM (Requirement Traceability Matrix) to ensure requirements were tested and traced back to business rules.

Environment: Agile-Scrum, SAFe CICD, TDD, JIRA, JIRA ALIGN, ServiceNow, Designer, Python, MS PowerPoint, MS Excel, MS Access, Oracle, MS SharePoint, MS SSIS, Postman, Robo-3T, Confluence, SQL, MS Outlook, WebEx, Skype, AWS, OpenShift.

Sr. Business Analyst/Product Owner

Roche Diagnostics - Indianapolis, IN

January 2017 to June 2018

Project-1

Implementation of Splitting Application on PEGA for identifying personally identifiable information (PII) and protected health information (PHI) within unstructured data, removing the PII and PHI from the unstructured data and replacing the removed information with case-type tags that allow the user to understand what information was removed and to tune the level of information removal in future data sets as well as split the inbound file into appropriate outbound files based on business logic.

Responsibilities:

- Reviewed and Analysed the HIPAA compliances and rules relating to Protected

Health Information (PHI) and Personal Identification Information (PII) to create and empower Device Authentication features for smooth and secure data transmission.

- Communicated the importance of ICD 10 and ICD 11 codes, baselined Apex EDI as interpreting software, and actively participated in its integration as well as

Collaborated to evaluate the Effectiveness of Health Data (HEDIS measures).

- Interviewed subject matter experts(SMEs) in the field and conducted extensive document evaluations to deeply understand the business processes, aiming to support and enhance Business Process Improvement (BPI). Additionally, collaborated with machine learning specialists to ensure and learn the best use of technology for a self-contained de-identification system.
 - Created and presented Process Workflow, Use-case diagram, and Activity Diagram (UML representations) utilizing Lucid Chart.
 - Created Source to Target Data Mapping documents for various stages of the process including the machine learning process.
 - Took an active role in Scrum meetings, Assisted the Product Owner in Backlog Grooming sessions, and prioritized the backlog items (PBI) using MOSCOW analysis. Assisted the team in estimating story points through T-shirt sizing and Planning Poker.
 - Hands-on experience in writing User Stories and Acceptance Criteria using JIRA to validate and deliver the Potentially Shippable Product Increment (PSPI), Definition of Done (DOD), and Definition of Ready (DOR) within JIRA.
 - Assisted the Scrum Master in creating Information Radiators like Burn-up – Burn-down charts to communicate with the Stakeholders and track the team's progress. Limiting the amount of Work-In-Progress, to deliver efficient and quality products.
 - Have used different Sprint Retrospective Techniques (Silent writing, Mad Sad and Glad, Happiness Histogram, Safety check) with and in the absence of scrum master to reflect the process of the teams according to the team's needs.
 - Evaluated the customized Firewall to control access for specific systems/users within EHR, while also engaging in both Test-driven development (TDD) and behavioral-driven development (BDD).
 - Applied Top-Down methodology of System Design dependent on different Functional Requirements, Non-Functional Requirements, and Data Requirements and helped the Technical team plan an In-House API framework. Assisted the Architects in making Data Flow Diagrams and imparted over all the Stakeholders.
 - Performed API testing, and validated the responses, and response time using POSTMAN. Involved in API documentation for REST services and documented JSON requests and responses.
 - Assisted in the creation of Test Cases, Test Plans, and Test Scenarios for machine learning. Effectively took an interest and encouraged Smoke Testing, Black Box, and User Acceptance Testing (UAT). Compare test results with Requirements by using the Requirements Traceability Matrix (RTM).
- Environment: Agile-Scrum environment, Azure DevOps, JIRA, PEGA, Confluence, Informatica PowerCenter Lucid Chart, Balsamiq, Nginx Server, WebLogic Server, MySQL DB, Tableau.

Project-2

Automate the LIMS system by integrating the EHR system into the LIMS system. The LIMS system 1 prints the 3D- barcode and the caregiver enters patient data manually in system 2. The system transfers data utilizing the HL7 protocol. The front desk is integrated with the LIMS system, so the customer data will be collected and entered into the front desk system manually. The LIMS system will extract the information from the front desk.

Responsibilities:

- Create, maintain, and "own" the product backlog and Managed backlog of user stories for 2 products simultaneously.
- Collaborated with teams to discover and deliver solution to the market presented by the product team lead and the business.

- Created and maintained the solution vision, roadmap, and backlog of work through the project's life cycle.
 - Collaborated with stakeholders to understand business problem statements and convert them into user stories within the team's backlog while managing, ranking, and prioritizing this backlog to reflect stakeholder's requirements.
 - Reviewed all completed IQs/OQs, checklists, and other documents for accuracy and compliance with GxP and FDA rules
 - Follow 21CFR Part 11 methodologies for validated systems in a structured SDLC environment. Trained in Good Clinical Practices GCP for work with the Clinical Trials area and GXP for work in R D areas
 - Effectively checked out the Scrum Ceremonies as, Backlog Grooming/Refinement, Sprint Planning meeting, Daily Scrum, Sprint review meeting and Sprint Retrospective.
 - Developed and executed automated test plans with the test team to reduce REST API regression testing time by 2 hours, as well as improve the accuracy of testing using assertions.
 - Solely responsible for the design of several key data tables and ETL routines, that will streamline reporting needs.
 - Created various graphs such as Heat Map, Tree Map, Scatter plots, and dashboards using Power BI and Excel.
- Environment: Agile-Scrum environment, JIRA, Azure devops, Lucid charts, Balsamiq, Google Web designer, Power BI, Informatica, MS PowerPoint, MS Excel, MS Access, Oracle, MS SharePoint, MS SSIS.

Business Systems Analyst

Fortis Hospitals Enterprise LTD - Mumbai, India

October 2015 to December 2016

Fortis Hospitals is one of the fastest-growing hospital chains in the country that is engaged in providing primary as well as tertiary healthcare services. The

Project involved redefining and rebuilding a financial application to make it easier for employees to complete expense reports for reimbursements. This included gathering and documenting the user requirements, analyzing the existing system, performing a gap analysis, and coming up with the target system.

Responsibilities:

- Participated the requirements analysis, impact analysis and recorded Business Requirements Document (BRD) and Functional Specification Document (FSD)
- Performed Interviews and document analysis along with facilitating Joint Action Development (JAD) Sessions and Requirement workshops to gather the required data and furnish requirements.
- Worked with business users to create UML diagrams like Use cases, Activity and Sequence diagrams using MS Visio.
- Created the Requirement Traceability Matrix (RTM) and assisted in defining Entry and Exit Criteria.
- Assisted the implementation in GXP environment to adhere to regulatory and risk management compliance.
- Participated in Scrum Ceremonies to aid the team at addressing user input to better modify the system to suit requirements.
- Created Reports and Dashboards in Tableau to communicate with the business stakeholders the status and performance.

- Data profiling and cleansing activities to enhance the correctness of the data and eliminate redundancies and loss of data.
- Assisted in mapping and integration of data from various RDBS, Flat files to perform data integration, validation, and normalization to maintain accuracy and effectiveness of the data.
- Develop, document, and maintain functional test cases and other artifacts like the test data, data validation, harness scripts and automated scripts using HP QC and involved in Defect Life Cycle Management and assisted in creating Issue logs.
- Assisted in the User Acceptance Testing and coordinated with the UAT team to schedule and assist the business users in understanding the features and capabilities and assisted in Testing.

Environment: Waterfall-Scrum Hybrid model, MS Visio MS PowerPoint, MS Excel, MS

Access, Hp QC, Tableau, Prezi

Client: Spec India

Ahmedabad, India

Role: Business Analyst (May 2015 - Oct 2015)

The project involved the implementation of Oracle and Java systems developed onsite to record the company's number of daily testing cases and web-based interface for observing drug procurement from suppliers by assigning a machine-readable exceptional code and a one-of-a-kind record is made each time when an individual handles. This portal makes it simple for tracking the samples

Responsibilities:

- Elicited business requirements for the project using interviews, document analysis, surveys and used standard template of the organization to develop requirements. Conducted Joint Application Development (JAD) sessions with SME.
- Generated reports on GAP analysis, SWOT analysis to understand the performance flow and other hazards.
- Analysed and gathered requirements for Business Requirement Document (BRD), Functional Requirement Document (FRD)
- Actively participated in planning and designing phase. Conducted various elicitation techniques to understand and communicate the requirements efficiently
- Created a Release Planning Document consisting of a high-level overview of all the requirements to be released in the upcoming sprint and assisted in creating a pre-defined release schedule.
- Helped in creating Conceptual and Logical Data model and created a Data Mapping document.
- Assisted in integrating data from regional storage to a single data mart by conformed dimensions .
- Based on the Release Planning Document, assisted the Project Manager with the release planning and helped the testers to conduct System testing and User Acceptance Testing before creating a solution for Deployment
- Created Deployment plan by analysing the characteristics of the Production environment and saw the project to "Go-Live"

Confluence, MS
