

Jhansi K

Email: jhansi8855@gmail.com

Ph: +1 8603318189

PROFESSIONAL SUMMARY:

- Around 9 years of experience as a **Business, Data analyst** working in the healthcare industry's IT sector with business intelligence.
- Used **EDI** transactions such as **EDI 270** eligibility inquiry, medical claim submission **EDI 837**, and **EDI 835-medical claims** payment.
- Used **HEDIS** for measuring the impact of healthcare conditions and used **LOINC** for observations and documentation.
- Utilized billing systems like **Medicare** and **Medicaid** claims processing, as well as handling revenue cycles.
- Worked to facilitate **interoperability** and improve healthcare operations using standards like **HL-7** and **FHIR**
- Experience in **SDLC** experience, including requirements gathering, analysis, design, programming, testing, deployment, and maintenance. Proficient in **ICD-9** and **ICD -10** coding.
- Worked in gathering both **functional** and nonfunctional user needs for the **business requirement document (BRD)** due to my work on **JAD sessions** for improvements.
- Demonstrated the ability to incorporate business **objectives** and **user** stories into BRDs and FRDs. Involved in **business planning and strategy development**, as well as data collecting, analysis, and **reporting on business processes**.
- Developed bespoke data **slicing** procedures for specific analysis utilizing technologies such as **SQL**.
- Designed best industry practices for data **visualization**, making dashboards simple to use, intuitive, and effectively communicate actionable insights.
- Developed Data **mapping** procedures were applied to standardize healthcare data, assuring consistency and accuracy in reporting and analysis.
- Proficient in automating data **validation**, cleansing, and enrichment procedures utilizing data **quality** solutions such as Informatica **Data Quality** or similar platforms.
- Created **SQL-based** test cases and executed to assess software applications and assure data **accuracy**.
- Developed extensive documentation for Viewpoint projects, including functional specs, **user guides** and process **maps**.
- Worked with **SQL** databases and developed to improve data retrieval **efficiency** and system performance.
- Worked with industry trends and developing technology in **data analysis** and oracle **SQL**.
- Experienced in **ETL** tools for migrating data from **cloud databases** like **Azure** to traditional databases.
- Worked knowledge of **JSON** and **XML** data interchange formats is required for healthcare data exchange and interoperability.
- Used **Project** management approaches such as **Agile** and **Waterfall** for adjusting project plans to unique projects.
- Involved in scheduling data refresh in **Power BI** Service to ensure that **reports** and **dashboards** are up to date with the most recent data.
- Worked with **JIRA** and **UAT** for testing and confirming solutions before the implementation.
- Created extensive reports and interactive dashboards using tools like **Tableau**, **Power BI**, and **Excel**.
- created use case diagrams, flowcharts, and process maps, to visually represent complex business processes.
- Worked on data **transformation, migration**, and analysis using **Azure Data Bricks**.
- Expertise in data **visualization, data quality, extraction, mapping**, and **governance**.
- Experienced in data manipulation **SAS formatting**, procedures, and **predictive designing**.
- Worked on **NOSQL** for usage in hospital healthcare management.
- Worked as a business and data analyst with exceptional abilities in **Power Bi, Tableau, SAS, and GCP**.
- Used working knowledge of the latest versions of **Microsoft Word, Excel, Visio, Project**, and power point.
- Proficient in **python, spark** is for data analysis and machine learning jobs.
- Used **Python** and **R** to analyze large healthcare datasets, extracting meaningful insights to aid decision-making processes.
- Worked with **google cloud environments** and **AWS** for date-driven Clinical decisions based on data and initiating, managing and using cloud-based applications for usage of services.

TECHNICAL EXPERIENCE:

- **Tools:** Informatica, JIRA, Git, snowflakes, MS Azure, sap project, python, ETL, power bi, tableau, SNOWFLAKE, Talend, google cloud, MS Office, Data Bricks, HTML.
- **Databases:** SQL, MS Access, my SQL, and Oracle
- **Expertise:** EDI, Medicare, Medicaid, HITECH, FHIR, HL-7, HIPPA, EMR, EHR.
- **Methodology:** WATERFALL and AGILE.
- **Health care knowledge:** Clinical decision support system, electronic health records, CDA, Medicare, Medicaid, SNOMED CT, HL-7 interoperability standards.
- **Coding:** RXNorm, cpt, ICD-10-PMS, ICD-10-CM, LOINC AND SNOMED CT.

PROFESSIONAL EXPERIENCE

CLIENT: united health group, Hartford

September 2021-present

Sr. Business /data analyst

Project: claims data governance

Responsibilities

- Utilized **HIPAA** for keeping claims data safe against illegal access and breaches. This includes putting in place adequate security measures, data encryption, access limits, and adhering to relevant privacy rules.
- Used complicated healthcare data, such as **claims** data and electronic health records, to extract useful insights and patterns. Used **ICD-9**, **ICD-10** codes for accessing various patient data.
- Led the requirements gathering process to comprehend **HEDIS** quality measurement specifications and ensure alignment. Analyzed **FHIR** resources and profiles thoroughly.
- Ensured seamless electronic data interchange by leading the business analysis and implementation of **EDI 837** transactions for healthcare claims processing.
- Developed and implemented strong **ETL** processes to ensure the seamless integration of disparate healthcare data sources into a centralized data warehouse.
- Developed Knowledge of **Medicare** and **Medicaid** policies and procedures was maintained.
- Developed **HL-7** interface specifications for data sharing between **EHR/EMR** systems and external healthcare systems were maintained to ensure compliance with industry standards.
- Managed the entire **SDLC** for claims data governance, from conception to completion.
- Skilled in leading **JAD** sessions to collect and prioritize business requirements while ensuring alignment with organizational goals and objectives.
- Developed and implemented a strong **data governance** framework for claims data that ensures data **quality, integrity, and security**.
- Collaborated with **cross-functional** teams to define and implement initiatives to improve data quality.
- Used **SAS** to evaluate huge healthcare datasets such as patient records, claims data, and clinical trial outcomes.
- Experienced in **SQL** queries to retrieve reliable data for insurance companies to analyze and target **data mapping**.
- Used **Oracle SQL Developer**, designed and built logical and physical data models to ensure accurate representation of healthcare data structures and **linkages**.
- Used **JIRA** filters, reports, dashboards, workflows, fields, and administration.
- Using Tableau, created interactive and insightful dashboards to present complex healthcare data in a visually appealing and easily understandable format.
- Lead the successful implementation of **Azure DevOps** for improved project management, version control.
- Expertise in extracting and manipulating healthcare data on Oracle databases using SQL queries to gain insights into patient demographics.
- Designed and optimized complex SQL queries in Snowflake for extracting, transforming, and loading (ETL) data for analytical purposes.
- Identified and addressed potential risks in **Agile** projects ahead of time, collaborating with the healthcare team to implement mitigation strategies and ensure project success.
- Managed test data production and data repositories for **UAT**, providing realistic data availability.
- Used **Power BI** to do in-depth data analysis to find **trends**, patterns, and actionable insights.
- Created customized **Python** and **R**-based dashboards to monitor and report on key performance indicators (**KPIs**), assisting in decision-making and process improvement.
- Designed and **implemented customized reports and dashboards** to provide healthcare professionals with real-time data and key performance indicators, improving decision-making and patient care.

- Used working knowledge of the latest versions of share point, **Microsoft Word, Excel, Visio, Project.**
- Analyzed large sets of patient data by using data warehouses like **AWS, GCP, and AZURE.**

Environment: Cerner applications, tableau, power bi, SNOMED, EDI, MS Access, SQL, FHIR, MS Excel, ICD-9, HIPAA, HITECH, Medicare, Medicaid, SAS, FHIR, XML, CITRIX, AWS, GCP, AZURE, JSON, Meta data, my SQL, API, PHI, EDI, HEDIS.

CLIENT: State of texas

August 2020-July 2021

Health care Business/Data analyst

Project: Healthcare data migration analytics.

Responsibilities

- Utilized healthcare quality measures were monitored using **HEDIS**, as well as data tracking and reporting on performance connected to disease preventive efforts. Created **CDSS** -clinical decision support system - and maintained to improve the quality of care and safety.
- Used **HIPAA** and **HL-7** health care standards to arrange the data. Utilized **Medicare** and **Medicaid** which are employed to ensure that medical requirements are met.
- Worked with **ICD9** and **ICD10** are used to maintain data models and ensure correct and consistent clinical data representation. Utilized **EHRs** to maintain patient portals and pharmacies.
- Analyzed **FHIR** resources and profiles thoroughly to ensure compliance with industry standards and regulatory requirements.
- Maintaining **ETL** process documentation and version control to ensure reproducibility and compliance with healthcare data requirements such as **HIPAA**.
- Ensured seamless communication by successfully integrating **Epic** Systems within the healthcare organization.
- Worked with **SDLC** requirements in analyzing data and usage of **agile** for reducing the risk along with the product loss.
- Proficient in designing, developing, and maintaining **data warehouses** to efficiently store and manage healthcare data.
- Experience gathering, **assessing**, and **documenting** business needs from healthcare **stakeholders** to improve processes and systems. created and updated requirement documents, making sure they are precise, thorough, and current.
- Collaborated with **cross-functional** teams to troubleshoot and resolve issues discovered during UAT, ensuring the smooth operation of the application. Used **data visualization** best practices to effectively explain **trends**, patterns, and anomalies in **patient data**, resulting in enhanced patient care strategies.
- Developed and enforced data governance policies and standards to ensure compliance with healthcare regulations such as HIPAA.
- used **SAS** programming in healthcare data environments for data extraction, transformation, and loading (**ETL**)
- used **Agile** techniques like story mapping and release planning to create a visual representation of the project scope.
- Used data **warehouse development** to transmit data from one source to another for development in hospital care.
- Worked on Data extraction and cleansing from healthcare databases and healthcare **warehouses** using **SQL** to extract relevant information from the sources. Designed and performed **SAS** programs for data analysis.
- Used a **structured query**, data containing specified variables and observations regarding the disease were retrieved.
- Used **SQL** for **data transformation**, such as eliminating **duplicate** data and entering updated data. **SQL cleansing** of
- Used **tableau** for custom calculations, measures, and aggregations based on data and performing calculations.
- Snowflake was used as the primary data warehousing solution, efficiently managing large datasets for analytics and reporting.
- used Tableau for data modeling and analysis to identify correlations, trends, and outliers in healthcare datasets.
- Created **Power BI** reports to track patient satisfaction scores and feedback, allowing healthcare institutions to make required adjustments to improve the patient experience.
- Used working knowledge of the latest versions of share point, **Microsoft Word, Excel, Visio, Project.**

Environment: ICD-9, ICD-10, MS Excel, MS Access, Medicare, Medicaid, ICD9, ICD10, HIPAA, HL-7, HEDIS, SQL, CDSS, EHR.

CLIENT: HCA health care, Florida

September 2018-july 2020

Public health data/business analyst

Project: population health analysis

Responsibilities

- Acquired data from a variety of sources like the usage of **HL-7**, for ensuring **interoperability** and easy data sharing between various healthcare systems.
- Expertise in **Medicare** and **Medicaid** programs, including coverage guidelines, billing procedures, and reimbursement.
- For 837 transactions, designed and executed **EDI** mapping and transformation processes to ensure accurate and efficient data exchange between healthcare **providers** and **payers**.
- Used **Electronic health records (EHRs)**, public health records, health surveys, and other sources which are used to undertake population health **analysis**.
- Implemented **HL-7 interface** solutions to provide seamless data sharing between various healthcare systems.
- Designed **ETL** techniques and executed to merge electronic health records (EHR) data from numerous sources into a consolidated data warehouse.
- used the **SDLC**, changes in the project's requirements, timetable, and scope were successfully handled, reducing project.
- Looked at the underlying medical issues, **socioeconomic status**, and **demographics** of COVID-19 cases.
- Used **claims** pertinent information from a variety of sources, including local hospitals and national sources. **Demographic** data, hospitalization rates, and healthcare **variables** are included in the data.
- Used **epidemiological** models, such as agent-based and compartmental models, to simulate and forecast how viruses will spread through the population. Making sure the data is accurate, consistent, and reliable by **cleaning** and **validating**.
- Implemented security measures, data **encryption**, and **access** restrictions to ensure healthcare systems complied.
- Executed the data for locating and fixing any data mistakes, missing numbers, **discrepancies**, or **data quality** problems that might influence the study.
- Extensive **data mapping** exercises were carried out, which included analyzing healthcare data sources to identify key data elements and mapping their flow through various systems and processes.
- Multiple **JAD** sessions were facilitated and led, collaborating with cross-functional teams to gather and document detailed business requirements for critical projects.
- Managed test data production and data repositories for **UAT**, providing realistic data availability.
- Ensured that all digital payment systems and processes follow **HIPAA** regulations, protecting patient data and privacy.
- Worked with **cross-functional teams** to translate business requirements into **SQL queries** and to provide technical support for data-related projects.
- Snowflake schemas were designed and implemented to organize data for analytical purposes, ensuring data integrity and facilitating efficient data retrieval.
- Within **Agile** teams, promoted a culture of continuous improvement, supporting innovation and efficiency.
- Created tableau automated reports to streamline and improve reporting processes for healthcare stakeholders.
- Used **SAS** to perform data cleaning and preprocessing procedures to ensure data correctness and consistency.
- Utilized **SQL** queries for patient cohorts according to age, gender, conditions, and other pertinent parameters. SQL was used to extract and **manipulate** data from healthcare databases in population health studies.
- Participated in healthcare project planning sessions, daily stand-ups, **sprint** reviews, and **retrospectives** to improve team cooperation and productivity using **Agile** principles within **Azure Devops** and **TFS**.
- Created Power BI solutions for clinical data **analysis**, allowing healthcare practitioners to track patient outcomes, spot trends, and enhance treatment regimens.
- Utilized SQL and Oracle database performance tuning techniques to optimize complex queries for efficient data retrieval and analysis.
- used Python and R for data cleaning and preprocessing tasks to ensure the integrity and quality of healthcare datasets.
- Used working knowledge of the latest versions of share point, **Microsoft Word, Excel, Visio, Project**.
- Created charts, reports, and **visualizations** to effectively convey insights into population health and findings.
- Worked with **Tableau's mapping** tools to view population health data spatially, pinpoint problem areas, and examine spatial patterns. Analyzed large data sets using the **Google cloud platform** and **AWS**.

Environment: SQL, SAS, tableau, MS Excel, MS Access, EHR, HL-7, HIPAA, AWS, GCP, power bi, agile.

CLIENT: Revolent group

December 2014-August 2018

Healthcare data /business analyst

Project: health care data analytics

Responsibilities

- Worked on **CDSS** for accessing patient data, medical expertise, and **algorithms** to give physicians real-time guidance.
- Implemented **HL-7** integration solutions to improve the flow of patient information by enabling effective connection between different healthcare apps.

- Ensured that **EDI** transactions fulfilled compliance standards such as the **837/835** implementation guides and code sets, ICD-10, and CPT codes. Analyzed data that can be used to monitor and measure healthcare quality by **HEDIS**.
- Collaborated with development teams to create and implement **FHIR** APIs, allowing for efficient data exchange between healthcare systems.
- Maintain detailed documentation of **Epic** configurations, workflows, and processes, and keep best practices for system.
- Maintaining **ETL** process documentation and version control to ensure reproducibility and compliance with healthcare data requirements such as **HIPAA**.
- Used solid comprehension of the **SDLC** and **QA** methods' development life cycles.
- Used Data **Warehousing** and Data **Integration** to collect and aggregate information from many sources, including **EHRs**, **claims** data, and public health registries.
- Designed and implemented **integration** testing scenarios in **Azure** Devops, validating healthcare software component compatibility and ensuring accurate **data transmission**.
- Custom **Jira** workflows specific to team needs were designed and implemented, speeding problem tracking and resolution processes. Created Data **analysis** to assist in discovering population **health patterns**.
- Collected **data systems**, which can warn healthcare workers about possible interactions between drugs and recommend suitable treatment tactics. Used data to improve patient care, strong **data governance** processes, and data.
- Created Data transformation workflows in **Azure** Data Factory to cleanse, enrich, and prepare healthcare data for **analytics** and reporting.
- Data warehouse solutions were designed and implemented to centralize and organize healthcare data for efficient reporting and analysis.
- Developed complicated data transformations in **Snowflake** to convert raw healthcare data into actionable insights.
- Worked to identify areas for improvement, **implement**, and measure progress over time by **evaluating** this data, resulting in better **patient care** and outcomes.
- created to ensure knowledge transfer and continuity, for comprehensive documentation for Tableau workflows, data sources, and best practices.
- implemented to protect sensitive patient information, role-based access control and encryption measures in **SQL**.
- Aided in the development of business cases for healthcare IT projects, demonstrating the value of **Python** and **R** in generating insights and achieving business goals.
- Utilized Large amounts of healthcare data are stored and organized using data warehousing technologies such as **Microsoft**, **SQL Server**, **Oracle**, and **Teradata**.
- Reported the data using BI technologies such as **Tableau** and **Power BI**.
- Experience in **proc SQL** joins and operations and proficiency in integrations of various data sources like **MS access**, and **MS Office**.
- Analyzed data using **AWS**, MS office, word, MS excel and **google cloud platform**.

Environment: EHR, HEDIS, SQL, Teradata, tableau, power bi, CDSS, MS Excel, RDMS, oracle, MS office, GCP.

EDUCATION- Bachelor of Science, India 2010-2014
