Ph: +1 (860)-331-8666

PROFESSIONAL SUMMARY: -

- Around 8 years of experience as a Business /Data Analyst with strong skills in analyzing healthcare data using **SQL Server, Power BI, Python, Tableau, SAS, and Microsoft Excel**.
- Worked on healthcare concepts like **HIPAA, HITECH, and EHR/EMR** systems and led initiatives to ensure data security and privacy compliance.
- Used **Billing systems** to manage **Medicare and Medicaid claims processing**, payment reconciliation, and revenue cycle management.
- Demonstrated expertise in **CCDA and FHIR** standards, using them to facilitate smooth health data interchange.
- Assisted in the establishment and documentation of **claim processing standards** and standard operating procedures (**SOPs**).
- Conducted in-depth **claim data analysis** to reveal trends and patterns to aid in **fraud detection** and prevention activities.
- Conducted staff training and education on **HIPAA compliance**, ensuring that all team members received information and aligned with data security safeguards.
- Tracked modifications in **HIPAA regulations** and other related healthcare laws to keep the organization aware and prepared for any compliance adjustments.
- Coordinated **User acceptance testing** operations, collaborating closely with end-users to evaluate and verify that the healthcare claims systems fulfilled business and regulatory requirements.
- Worked on **EDI transactions** like **EDI 835, 837, 277, and 277CA** to ensure accurate and timely data exchange.
- Utilized **HL7 and FHIR** messaging standards for data exchange and interoperability.
- Skilled in performing **benefit plan audits** to guarantee regulatory compliance and corporate policy.
- Experienced in **transforming, mapping, cleaning, and preparing** data to meet program requirements while maintaining data correctness and integrity.
- Worked on **SNOMED CT, LOINC, and ICD-10** systems to standardize clinical data for healthcare analysis, and reporting.
- Documented **reporting requirements, data mapping, and business procedures** to ensure knowledge sharing and consistency across the organization.
- Experienced at developing and managing **Azure DevOps boards, backlogs, and sprints**, allowing for **successful Agile project management and planning**.
- Tested and approved **business associate agreements (BAAs)** with external businesses handling **HIPAA data** to create data security obligations.
- Skilled in using **Pivot tables** to create dynamic charts and graphs to help in data-driven decision-making.
- Experienced in interpreting and **implementing HIPAA regulations**, protecting sensitive health information, and maintaining patient confidentiality.
- Expertise to undertake **HIPAA risk assessments, gap analyses**, and remedial efforts to achieve and maintain compliance with data protection regulations.
- Implemented **Azure DevOps integration** with other software development lifecycle tools and services, boosting continuous integration and delivery (CI/CD) capabilities.
- Experienced in **qualitative and quantitative data collection** and analysis techniques, allowing for complete research and data interpretation.
- Participated actively in **Azure DevOps community forums** and online resources, maintaining current on the latest features and best practices for optimizing platform utilization.
- Experienced with **OPTUM claims editing method** and worked on **claims denials on COSMOS screens**.
- Created Excel-based dashboards to present **key performance indicators (KPIs)** and trends to stakeholders.
- Experienced at transforming **XML** documents into multiple formats, such as **HTML, PDF, or other XML** structures, utilizing **XSLT (Extensible Stylesheet Language Transformations)**.
- Worked on **SDLC (Software Development Life Cycle)** models like **Agile methodologies** and **Waterfall Methodologies**.
- Managed **Agile projects successfully using the Scrum methodology**, including sprint planning, backlog grooming, daily stand-ups, sprint reviews, and retrospectives.

- Experienced at writing concise and actionable **User stories** that capture end-user requirements and express their needs in a Scrum Agile setting.
- Conducted **User acceptance testing (UAT)** sessions, working closely with end users to execute test cases and identify inconsistencies.
- Designed **snowflake schema, and star schema** for **Data Integration** from a cloud database to a traditional database using the **JIRA** tool.
- Demonstrated the ability to document business objectives, **User Stories** in **BRDs** and **FRDs**.
- Conducted **Scrum Meetings and JAD Sessions** with EPIC representatives, and Project Managers to break down **Functional and Non-functional requirements**.
- Conducted **Impact analysis and Gap analysis** to analyze the potential implications of **Data transformation and Data migration** projects.
- Implemented **Root Cause analysis** to drive quality improvement and ensure regulatory compliance.
- Utilized **CA Rally** to help with **Agile project** management and to improve communication and transparency among Agile teams.
- Expertise in utilizing **Informatica** to **extract, transform, and load (ETL)** data from multiple sources into target systems while ensuring data quality and integrity.
- Utilized **NoSQL databases** like **MongoDB** and **Cassandra** to manage non-tabular and unstructured data.
- Used **Databricks** and **MS Azure**, **UI/UX designers, tech leads, solution architects, database administrators, developers, and QA testers**, to promote flexible and efficient data analysis.
- Utilized **Python** and **Oracle** to develop **Data Visualization** dashboards using **QlikView**, allowing stakeholders to gather data and improve decision-making processes.

TECHNICAL SKILLS:

Healthcare Knowledge	HL7 Interoperability standards, FHIR, HIPAA, CDA, LIMS, Medicare, Medicaid, SNOMED CT, Healthcare Operations, Clinical Decision Support System, EHR.
Clinical Coding	ICD-10-CM, ICD-10-PCS, CPT, SNOMED CT, LOINC
EHR Systems	EPIC, Cerner Citrix
Tools	ETL tools, Tableau, Power BI, SAS, My SQL, Snowflake, MS Azure, Microsoft Office, JIRA, AWS Cloud, Google Cloud, Databricks, Informatica.
Databases	SQL, MY SQL, MS Access, MS Visio, ORACLE
Methodology	Agile and Waterfall Methodology
Epic Modules	EpicCare, Order Entry, Provider Documentation, Order transmittal, Smart Forms.

PROFESSIONAL EXPERIENCE

Client Name: United Health Care, Hartford, CT

Senior Business / Data Analyst

Project: Epic Systems Implementation

Jan 2022 - Present

Project Description:

Worked on Epic Systems Implementation to introduce and integrate the Epic electronic health record (EHR) system into the current infrastructure of a healthcare organization. The Epic EHR system was implemented using designing, configuring, testing, training, and eventually deploying it to improve patient care, streamline workflows, and improve overall operational efficiency. Coordinated with the stakeholders where I analyzed and gathered the business requirements and led the success of the project.

Responsibilities:

- Implemented **Epic Systems electronic health record (EHR) software** to allow seamless data transfer between the **Epic EHR** system and other systems like laboratory, radiology, and pharmacy systems.
- Ensured compliance with privacy standards such as **HIPAA, HITECH, and GDPR** throughout the data integration process.
- Conducted regular **backlog reviews** and collaborated closely with development teams to guarantee the correct and timely delivery of **user stories in Azure DevOps**.
- Designed and implemented integration interfaces and connectors using industry-standard protocols and integration tools like **HL7, C-CDA, and FHIR**.

- Tested **HL7 interfaces** extensively to ensure data accuracy and system interoperability, using tools such as **HL7 Inspector and the NIST Immunization Test Suite**.
- Worked with **Qualified Health Information Networks (QHIN), Relay, and Health Quest** to safely transfer patient data and help with care coordination activities.
- Utilized coding systems such as **ICD-10, CPT codes, and LOINC** to categorize and analyze clinical data.
- Utilized **Laboratory Information Management Systems (LIMS)** to combine and analyze laboratory data, improving operational efficiency and data quality.
- Developed a **CDSS** that uses clinical standards and patient-specific characteristics to support personalized treatment decisions.
- Implemented **Agile, continuous methodologies** to coordinate with key project workers to acquire **functional and non-functional requirements** during **JAD sessions**.
- Conducted **Root Cause analysis** and **Gap Analysis** to identify root causes and gaps in care coordination.
- Provided **User training** and support to improve understanding and utilization of integrated systems.
- Loaded data into the target system and performed **Extract, Transform, and Load** functions using **Snowflake**.
- Created interactive dashboards and reports for stakeholders using **Data Visualization** tools such as **Tableau, Power BI, and QlikView**.
- Developed **Data mapping** strategies and **Data transformation** procedures to enable proper data exchange.
- Used **SQL, Python, and R** to query and modify data, perform statistical analysis, and develop prediction models.
- Conducted **Ad-hoc analysis** and **Data Mining** to improve strategic decision-making and generate operational efficiencies.

Environment: HIPAA, HITECH, HL7, FHIR, LOINC Tableau, PowerBI, MS Excel, MS Visio, MS Access, ETL, SQL, QlikView, JIRA, Databricks, Informatica, Google Cloud, AWS, NoSQL, SAS, Snowflake, UAT.

Client Name: Centene Corporation, Washington, DC

Senior Business / Data Analyst

Jan 2020 – Nov 2021

Data Integration for EHR Systems:

Project Description:

Worked on Data Integration for EHR systems to streamline and improve the exchange of data between different EHR systems utilized inside a healthcare organization or across numerous healthcare institutions. Medical history, diagnosis, treatments, prescriptions, and test results are all stored in EHR systems.

Responsibilities:

- Collected data from multiple sources, including **electronic health records (EHRs)**, laboratory systems, and medical devices.
- Experienced in creating thorough specifications using problem-solving approaches such as **Unified Modeling Language (UML) and Rational Unified Process (RUP)**.
- Collaborated with technical teams to create and maintain secure data exchange standards in compliance with **HIPAA** and **HITECH** regulations.
- Utilized healthcare standards such as **LOINC**, and **SNOMED CT** to standardize clinical data, allowing for proper analysis and reporting.
- Utilized **ICD-10, CPT, and HCPCS** to categorize clinical data for accurate analysis and interoperability.
- Worked with **HL7 and FHIR (Fast Healthcare Interoperability Resources)** standards to enable easy data sharing and interoperability between different **EHR systems**.
- Used a hybrid approach **SDLC (Software Development Life Cycle), Agile, and Waterfall approaches** to effectively plan, execute, and deliver the project.
- Created **Business Requirements Documents (BRDs)** and **Functional Requirements Documents (FRDs)** capturing business requirements and desired outcomes.
- Coordinated **JAD sessions** with stakeholders, and end-users to gather requirements, **deliverables status, shared issues, end-user concerns, budget, and company requirements**.
- Conducted **Gap analysis and Root Cause Analysis** to identify disparities among existing **EHR systems** allowing for targeted improvement initiatives.

- Conducted **User Acceptance Testing (UAT)**, to assess data integration processes and ensure system functionality.
- Utilized **Snowflake and Star schema** data models to manage the integrated data, allowing for quick data retrieval and analysis.
- Implemented **Data integration** strategies using **ETL (Extract, Transform, Load)** tools and methodologies to facilitate **data extraction** and integration from various systems.
- Implemented data integration techniques, utilizing technical expertise in **data mapping**, and **data transformation** procedures, to allow seamless exchange of healthcare data from different sources.
- Developed and maintained **data dictionaries** and **metadata** stores to document and track data mappings, transformations, and company standards.
- Designed and tested custom queries using **Microsoft T-SQL** and **Crystal Reports (CR)** that comply with the technical specifications and **NoSQL** databases to handle unstructured or semi-structured healthcare data.
- Integrated **Databricks** with cloud services, such as **Google Cloud** and **AWS**, for data storage and access.
- Created **Data visualizations** and reports using **Tableau**, **Power BI**, and **QlikView**, allowing stakeholders to gain valuable information from integrated data.
- Utilized **MS Visio** to develop process flowcharts and **MS Access** for database management and reporting.
- Conducted **Ad hoc analysis** using **SAS**, **SQL**, and **MS Excel** to retrieve information from the integrated EHR data, enabling informed decision-making and data-driven strategies.

Environment: HIPAA, HITECH, HL7, FHIR, LOINC, Tableau, MS Excel, PowerBI, MS Visio, MS Access, ETL, SQL, QlikView, JIRA, Databricks, Informatica.

Client Name: Cigna Healthcare, Bloomfield, CT

Business / Data Analyst

Aug 2017 – Dec 2019

Project: Revenue Cycle Management

Project Description:

Worked on Revenue Cycle Management (RCM) system to optimize financial procedures and increase revenue generation for healthcare business. Collaborated with cross-functional teams to improve efficiency and revenue capture by streamlining billing, coding, and payment operations.

Responsibilities: -

- Configured the **Epic EHR system** to comply with revenue cycle best practices, coding guidelines, and billing regulations.
- Ensured **HEDIS** and **QHIN** standards by implementing data validation tests, addressing data privacy and security requirements, and ensuring the integrity and completeness of migrated data.
- Implemented **HL7** and **FHIR** standards for seamless integration of healthcare data from multiple sources.
- Ensured **HIPAA** and **HITECH** compliance, resulting in a safe and privacy-aware data environment without any reported breaches.
- Developed a suitable system for **Agile** and **Waterfall SDLC** projects, managed timelines, and achieved measurable advancements in product turnover and product quality.
- Developed a **business requirement document (BRD)**, **FRD** and gathered **functional and non-functional requirements** documents for approval from stakeholders.
- Conducted **End-to-end testing** of RCM procedures and operations to ensure smooth integration and correct functioning of the **Epic EHR system**.
- Conducted **Data cleansing**, **Data transformation**, and **Data integration** to ensure data quality and consistency.
- Developed a detailed **Data Migration** plan that outlines the overall approach, activities, and deliverables.
- Utilized **ETL tools** like **Informatica** and **Databricks** to process and cleanse the data according to the defined standards.
- Worked with end users to conduct **User Acceptance Testing (UAT)** and resolve any concerns or anomalies.
- Implemented **user stories** interfaces to enable personalized data exploration.
- Created **Data Visualizations** and reports to track **key performance indicators (KPIs)**, allowing stakeholders to analyze performance and make data-driven decisions.
- Conducted **JAD sessions** and **Scrum meetings** to ensure that the reporting tools were used effectively.

- Generated **SQL queries** and data manipulation techniques to ensure **data integrity** and improve **data extraction** processes and created **sprint planning** and conducted daily **Scrums** to monitor progress with **JIRA**.
- Utilized **QlikView**, **Tableau**, and **Power BI**, and created automated reporting procedures that improved the efficiency and accuracy of quality metrics reporting.

Environment: Tableau, PowerBI, MS Excel, MS Visio, MS Access, ETL, SQL, QlikView, Python, JIRA, Snowflake, Informatica, HIPAA, HITECH, HL7, FHIR, LIMS, LOINC, ICD-10.

Client Name: CVS Health, Hartford, CT

Business / Data Analyst

Sept 2015 – July 2017

Project: Claims Process Management

Responsibilities:

- Conducted an in-depth analysis of the claims process to ensure compliance with **HIPAA and HITECH** laws for patient data protection and security.
- Implemented **CPT and ICD-10** coding systems to ensure accurate and standardized medical billing.
- Collaborated with stakeholders to integrate **LIMS** and **LOINC** for more quickly lab test result reporting and code standardization.
- Collaborated with the IT team to integrate **Cerner applications** and promote seamless data sharing using **HL7 and FHIR standards**.
- Implemented **Citrix Workspace** for remote access and secure data management, guaranteeing compliance with data security regulations.
- Ensured seamless integration of **EMR and EHR** systems using **EPIC** as the major platform.
- Developed **key performance indicators (KPIs)** and implemented tracking systems to monitor **claims processing** metrics.
- Conducted **JAD Sessions** and **Scrum Meetings** to educate claims processors and other stakeholders on the improved processes and technologies.
- Collaborated with stakeholders to create **BRDs and FRDs** to ensure project goals and user demands were met.
- Implemented the **Snowflake schema & Star Schema** for data modeling and improved data warehouse performance.
- Implemented **Data validation** and **Data Integration** quality assurance methods to ensure accurate **claims adjudication** and reduce errors.
- Conducted **User Acceptance Testing (UAT)** to test system enhancements and ensure smooth integration with **ETL tools** and processes.
- Utilized **Tableau, Power BI, and MS Excel** to do an in-depth analysis of the claims process to find delays, trends, and opportunities for improvement.

Environment: HIPAA, HITECH, HL7, FHIR, LIMS, LOINC, ICD-10, Tableau, PowerBI, MS Excel, MS Visio, MS Access, ETL, Snowflake, SQL.
