

Jilkumar Patel

Boston, MA 02108

jilkumarpatelvdp7d_c5y@indeedemail.com

+1201 708 8568

Sr. Business Analyst with 8 years of experience in the finance and investment banking sector. Proven, track record in collaborating with cross-functional teams to drive business growth through strategic decision support. Skilled in data analysis, financial modeling, and technology integration, with a commitment to delivering actionable recommendations and ensuring operational efficiency, my skills encompass strategic cross-selling, portfolio optimization, and fraud detection, ensuring data-driven decisions for organizations.

- Knowledge on various Compliance and regulations such as Anti-Money Laundering (AML), 401(k), 403(b), IRA, Wash Sale Act, BASEL I, II, III, Comprehensive Capital Analysis and Review (CCAR), Bank Secrecy Act (BSA), Suspicious Activity Report (SAR).
- Fair knowledge of Capital Markets, Wealth Management, Asset Management, Mortgage, Portfolio Management, and Financial Services with a good understanding of financial instruments like Equities, Derivatives (Futures, Forwards, Options and Swap), Bonds, Mutual Funds, Exchange Traded Funds (ETFs), FOREX currencies, Commodities, Trade Life Cycle, Option Greeks.
- Proficient in Financial Modeling, conducting Financial Analysis with advanced analytics, Trend analysis, Forecasting, Budgeting, and Financial Planning. Skilled in strategic cross-selling, algorithmic trading, Portfolio Optimization, and Fraud Detection.
- Led projects utilizing a spectrum of SDLC Methodologies, including Waterfall, Scrum, and Scaled Agile Framework, ensuring the consistent delivery of high-quality software solutions while adeptly adapting to the evolving dynamics of each project.
- Well versed with Elicitation Techniques, including Workshops, Brainstorming, Interviews, Document Analysis, and Prototyping, collaborating effectively with Stakeholders to ensure thorough requirement gathering and insightful analysis.
- Proficient in documenting the elicited requirements in Business Requirement Document (BRD), Functional Specification Document (FSD), Requirement Traceability Matrix (RTM) and System Requirement Specifications (SRS).
- Expertise with Use Case Design, analysis and scenarios, Business Process Modelling Notation (BPMN), Workflow Diagrams, Unified Modelling Language (UML) with expertise in creating Use Case Diagram, Activity Diagrams and Sequence Diagrams.
- Vigorously used various modelling tools like Power BI, MS Visio, Balsamiq, Lucid Chart. Hands on experience with interactive and collaboration tools like Confluence, Tableau and SharePoint to improvise team communication and teamwork.
- Emphasized MVP in backlog grooming for efficient product delivery. Collaborated with stakeholders, integrating iterative feedback to prioritize features aligned with market demands, optimizing value delivery and stakeholder satisfaction.
- Expertise in writing User Stories and their Acceptance Criteria and assisted Product Owner in defining Definition of Ready (DOR) and Definition of Done (DOD), INVEST (Independent, Negotiable, Valuable, Estimable, Small, Testable) criteria for user stories.
- Prioritized user stories by employing methodologies like MoSCoW, KANO, 100 points, and walking skeleton. Collaborated closely with product owners to align features with business objectives, ensuring optimal value delivery and customer satisfaction.

- Worked with development team in estimating user stories utilizing techniques such as Relative Mass Valuation, Planning Poker, and T-Shirt Sizing. Enabled efficient resource allocation and timely release of crucial functionalities for high-quality software.
- Facilitated Sprint Retrospectives to encourage a culture of continuous improvement. Utilized techniques like Start-Stop-Continue, 4Ls (Liked, Learned, Lacked, longed), Sailboat Retrospective, and Happiness Histogram to gather team insights.
- Well versed in Online Transaction Processing (OLTP) and Online Analytical Processing (OLAP) including ROLAP, MOLAP and HOLAP and experience in performing OLAP operations like Roll-up, Drill-down, Slicing, Dicing, and creating Pivot table.
- Applied data models for clear data structure definition, facilitating effective communication between business and technical teams. Guided database design, data integration, and impact analysis, ensuring data-driven decisions and governance.
- Conducted in-depth exploration of source systems, analyzing data structures, relationships, and processes.
- Proficient in data profiling and comprehensive quality assessments to ensure reliable data integrity. Collaborated effectively with technical teams to understand integration points, extraction methods, and transformation processes for effective sourcing.
- Used Informatica PowerCenter to perform ETL jobs, mapping requirements & coordination with developers to design reports.
- Proficient in Functions, Joins, Union, and Views, and adept at constructing SQL queries utilizing Clauses, Aggregate Functions, and Joins. Expertise utilized for extracting and analyzing data from databases, particularly for reporting purposes.
- Understanding of AWS tools, including API Gateway, DataSync, Kinesis, S3, Lambda, and Redshift, to architect, manage, and automate data processes, enabling secure and efficient data handling, real-time analytics, and data-driven decision-making.
- Adequate knowledge in performing CRUD operations including GET, PUT, POST, PATCH and DELETE methods, API Endpoint Validation using POSTMAN and documentation using Swagger to capture the different error codes received and parameters.
- Collaborated effectively with QA Team in formulating Test Plans, Test Cases, Test Scripts, Test Scenarios, Test Data, issuing the Test Reports, and validating requirements with the Requirements Traceability Matrix (RTM) to cross-verify the increments.
- Assisted Testers in performing UAT, Smoke and Sanity Testing, Regression Testing and creating artifacts like Test Plans, Test Scenarios, Test Cases and Defect Logs in the Software Testing Life Cycle. Well versed with TDD, ATDD, BDD.
- Proficient in Business Intelligence and reporting with experience in creating Static Reports, Ad hoc reports, Interactive Reports, Financial Reports, and Interactive Dashboards using tools like Tableau, Power BI, and Salesforce Einstein Analytics.

Work Experience

Sr. Business Systems Analyst

JPMorgan Chase - Boston, MA
May 2022 to Present

Project Description: Leading a project to enhance cross-selling and upselling strategies through advanced analytics. By integrating customer insights with economic data and employing recommendation

algorithms, we aim to forecast needs, maximize revenue, and improve KPIs: conversion rates, revenue impact, retention rates, decision turnaround time, and recommendation accuracy.

Roles and Responsibilities:

- Conducted comprehensive document analysis, leveraging advanced data extraction and analysis techniques to gain deep insights into cross-selling and upselling strategies. Identified patterns, trends, and actionable insights within business.
- Collaborating with sales, marketing, Finance and customer service stakeholders utilizing diverse elicitation techniques such as interviews, workshops, and brainstorming to capture and understand their needs, effectively guiding strategy enhancements.
- Analyzed the existing system by implementing the Gap Analysis and created the AS-IS & TO-BE documents to address the areas of improvement and enhancements to address the system capabilities and needs to reach the objectives of the project.
- Assisted the product owner in formulating a product vision, integrating thorough market analysis and competitor insights.
- Created Wireframes, Graphical user interface (GUI) Mockups and Prototypes using Lucid Charts. Created Evolutionary and Throwaway prototypes to explain the end-to-end system to the stakeholders to find if there are any changes in requirement.
- Facilitated User Story Writing sessions adhering to INVEST (Independent, Negotiable, Valuable, Estimable, Small, Testable) and SMART (Specific, Measurable, Achievable, Relevant, Time-bound) criteria, ensuring optimal story quality and effectiveness.
- Effectively led Scrum ceremonies (Sprint Planning, Daily Scrum, Sprint Review, and Sprint Retrospective), aligning with project goals. Established clear Definition of Ready (DOR) and Definition of Done (DOD) criteria, enhancing sprint efficiency and progress.
- Initiated and led time-boxed daily standups, ensuring smooth sprint progress and addressing impediments in the Scrum Master's absence. Collaborated using JIRA to generate burndown report, enabling detailed monitoring of team performance.
- Identified and sourced diverse data sets, including external APIs providing interest rate data and consumer spending statistics, as well as internal on-premises data sources such as product ownership, loan, and credit data.
- Assisted the development team by conducting rigorous API testing using Postman, ensuring the reliability and functionality of critical endpoints and documented these tests comprehensively, creating clear and detailed test cases using Swagger.
- Collaborated with ETL engineers to design, develop, and execute data ETL processes, successfully ingesting and storing this information in AWS S3. Performed data profiling and mapping documentation. Implemented a meticulous 'trickle approach' in ETL processes to maintain a consistent flow of data, enhancing data integrity and reliability throughout the transfer.
- Analyzed data from AWS S3 bucket and Redshift using SQL functions (aggregate, order by, group by, joins, Union).
- Conducted comprehensive ROLAP (Relational Online Analytical Processing) operations to extract, transform, and analyze complex datasets, enabling data-driven decision-making and strategic insights for key stakeholders.
- Collaborated with QA to design and execute test plans, including User Acceptance Tests (UATs) and data validation, ensuring the accuracy of advanced analytics integration with economic data and recommendation algorithms.
- Logged bugs and defects in code, leveraging a RACI matrix for clear roles and responsibilities. This strategic approach significantly enhanced defect resolution efficiency ultimately contributing to high-quality work.

- Utilized Tableau and SQL for data analysis, identifying valuable patterns and enabling effective customer segmentation based on purchase history and demographics. Collaboratively optimized targeted marketing strategies with data analysts.

Environments: AWS, Glue, AWS Redshift, AWS Lambda, AWS API gateway, AWS DataSync, AWS S3, AWS QuickSight, AWS QuickSight ML, AWS Test automation, Agile DevOps, Confluence, JIRA, Postman, Swagger, SQL, MS Visio, Python.

Sr. Business Systems Analyst

E*TRADE - Jersey City, NJ

September 2020 to April 2022

Project Description: I led an innovative project centered on algorithmic trading. Leveraging machine learning and real-time data, we automated trading decisions, optimized portfolios, and managed risks effectively. Our platform provided efficient tools for users, ultimately leading to improved returns and a confident approach to navigating the intricate financial landscape.

Roles and Responsibilities:

- Implemented highly optimized quantitative stock filters, utilizing a combination of financial metrics and technical indicators, to continuously monitor a vast portfolio and successfully identify lucrative short-term trading opportunities.
- Conducted document analysis and restructuring for the Algorithmic Trading and Investment Strategies platform. Organized and curated existing documentation to facilitate efficient knowledge management and streamlined accessibility for the team.
- Cross-verified existing requirements and gathered new ones using a range of elicitation techniques, ensuring a comprehensive and accurate understanding of project needs. Employed various methods enhance the overall requirement gathering process.
- Created detailed technical and functional specifications, emphasizing integration points and system interfaces crucial for algorithmic trading strategies, aiding in effective communication between development teams and stakeholders.
- Actively collaborated with legal, compliance, and system architecture teams to ensure regulatory compliance was integrated into technical documentation, aligning with SAFe framework and enhancing customer interaction with the platform.
- Engaged with diverse stakeholders--traders, portfolio managers, and legal and compliance teams--to understand their distinct needs and preferences. Skillfully translated these insights into actionable, precise requirements for the development team.
- Utilized UML diagrams (use case, sequence) to bridge communication gaps between stakeholders and development teams, ensuring a shared and accurate understanding of the algorithmic trading and investment platform's architecture and features.
- Created wireframes and mockups using Figma to visualize user interfaces and workflows, ensuring alignment with stakeholder expectations and project requirements. Incorporated iterative feedback loops to reevaluate wireframes and mockups.
- Utilized prioritization techniques like KANO method to sequence user stories based on value, dependencies, and urgency.
- Worked closely with cross-functional team to refine features and prioritize backlogs, ensuring alignment with product vision.
- Defined precise and testable acceptance criteria for each user story, outlining expected outcomes and success measures.
- Orchestrated real-time and historical market data acquisition, preprocessing, and transformation using Azure Data Factory for ETL processes, seamlessly loading data into MongoDB. This optimized workflow greatly facilitated algorithm development.

- Utilized SQL queries (Unions, Joins, Aggregate functions) to extract, transform, and load large datasets from multiple sources to perform exploratory data analysis, identify trends and patterns, and generate actionable insights to guide business strategy.
 - Collaborated with data scientists to build and validate machine learning models for algorithmic trading strategies. Performed exploratory data analysis to identify trading signals and relationships. Assisted with feature engineering, model selection, hyperparameter tuning, and performance testing leveraging Python, NumPy, and scikit-learn.
 - Collaborated with QA teams to validate that acceptance criteria were met during development and testing phases.
 - Collaborated with developers in conducting API testing using Postman to validate endpoints and data exchanges, ensuring seamless integration and robust functionality of the algorithmic trading and investment platform's API infrastructure.
 - Documented API test results, including error codes and CRUD operations, in Swagger for enhanced clarity and accessibility.
 - Assisted the QA team in creating and executing detailed test plans, defining approaches for unit, integration, and system testing. This collaboration facilitated thorough coverage and strict adherence to specifications, ensuring high-quality deliverables.
 - Designed interactive dashboards providing real-time visibility into trading strategy performance, portfolio risk metrics, and market dynamics. Enabled fund managers to visualize algorithmic trading results, identify opportunities, and adjust models.
- Environments: Azure DevOps Service, Figma, Office 365, SharePoint, Tableau, Postman, Swagger, HP ALM, Azure Data Factory, Python, SQL, MongoDB, NumPy, Scikit-learn.

Business Analyst

Florida Department of Children and Families - Tallahassee, FL
March 2018 to August 2020

Project Description: State of Florida's EBT system faced significant challenges due to outdated technology, resulting in delays and potential fraud. The primary objective was to modernize the system to improve benefit distribution, reduce fraud, and enhance the user experience, ensuring prompt benefit delivery and efficient fraud detection.

Roles and Responsibilities:

- Collaborated closely with state agencies to proactively pinpoint and address critical pain points within the current EBT system, leveraging a comprehensive analysis to meticulously delineate precise project objectives and imperative requirements.
- Conducted semi-structured interviews with State Government Official, Department of Social Services Representative, and EBT Program Administrator to extract critical insights and requirements, shaping the project's direction.
- Organized focus group sessions with EBT regulators to comprehensively delve into the intricate rules and eligibility criteria of the SNAP program, fostering a deep understanding of the program's intricacies and customer eligibility requirements.
- Analyzed the existing Electronic Benefit Transfer system in our state, identifying critical issues such as slow transaction processing, manual benefit tracking, and a lack of real-time data for fraud detection, resulting in delays and inefficiencies.
- Led an initiative to modernize the state's EBT system, resulting in a highly efficient platform with real-time transaction tracking capabilities. This enhancement substantially reduced delays, improved accuracy, and prevented fraudulent activities.

- Prioritized the key components for the MVP, focusing on real-time transaction tracking, efficient benefit distribution, and robust fraud detection module to enhance the EBT system's functionality and deliver substantial improvements.
- Crafted detailed user stories and acceptance criteria, and Definition of Done (DOD) to precisely define project requirements, ensuring a clear and actionable roadmap for development and alignment with stakeholder expectations.
- Orchestrated historical market data acquisition, preprocessing, and transformation using Salesforce Connector for ETL processes, seamlessly loading data into SalesforceDB. This optimized workflow, reduced frauds, and enhanced user experience.
- Sourced dummy data sets from data. World for Security Scanning, Risk Assessment, Vulnerability Scanning, Penetration Testing and Security Auditing, ensuring that data security was in compliance with the applicable data regulation policies.
- Managed end-to-end User Acceptance Testing (UAT) processes, from test planning and scenario creation to execution and defect management, ensuring the system's alignment with user needs and seamless resolution of any identified issues.

Environment: Lucid charts, Salesforce Database, JIRA, Confluence, Salesforce connector, Postman, Swagger, PowerBI, MS Office 365 (MS word, MS Excel), Salesforce Lightning Platform, Salesforce Einstein Analytics.

Jr. Business Systems Analyst

Charles Schwab - Fairfield, CT

December 2016 to February 2018

Project Description: The client has an established business in online investing and investment portfolio management. The project was to enhance the system by adding a new feature named Goal Tracker which allows clients to set and manage their financials goals online, it projects the hypothetical performance of client's portfolio and monitors the likelihood of achieving a goal.

Roles and Responsibilities:

- Conducted document analysis, extensively reviewing existing system documentation and relevant financial industry materials. This approach aimed to gain a comprehensive understanding of the project's context and domain intricacies.
- Conducted in-depth requirement gathering sessions and stakeholder interviews to define the scope and objectives of the "Goal Tracker" feature integration. Translated these insights into detailed and structured requirement documents.
- Facilitated discussions, carefully vetted ideas, built compelling business cases, and collaborated seamlessly with the business lines of asset management, capital markets, alternative investments, and corporate trust.
- Assisted the Sr. BA in creating and organizing crucial business artifacts, establishing a centralized repository on Confluence.
- Collaboratively worked with the product owner to prioritize epics using the MoSCoW approach. Additionally, horizontally sliced epics into user stories and facilitated the scrum team in estimating story points using Planning Poker.
- Engaged in Scrum ceremonies, fostering collaboration and iteration. Facilitated seamless communication between the development team and stakeholders, ensuring project alignment, and improved product delivery to enhance client satisfaction.
- Collaborated with cross-functional teams, including developers and UI/UX designers, to facilitate seamless integration of the "Goal Tracker" feature. Maintained a strong feedback loop with stakeholders for optimal usability and client satisfaction.

- Assisted deployment team in running different builds deployed to test dev, test and prod environment using Jenkins.
 - Assisted QA to create Requirements Traceability Matrix (RTM), bridging the gap between development and testing teams across multiple sprint executions. This approach ensured a seamless linkage of defects to specific requirements, providing insights for targeted testing efforts and enabling accurate test coverage reporting, resulting in enhanced product quality and efficiency.
 - Orchestrated real-time and historical market data acquisition, preprocessing, and transformation using Aws Glue for ETL processes, seamlessly loading data into AWS Redshift. This optimized workflow greatly facilitated Goal Tracker development.
 - Assisted QA in executing UAT tests and closely collaborating with end users for software release validation. This proactive role ensured rigorous testing, strict quality standards adherence, significantly improving the overall user experience.
 - Assisted QA in API testing using Postman to validate the request and response for JSON based RESTful services using CRUD based methods like GET, POST, PUT, DELETE, PATCH to capture the response error codes and data received in the body.
 - Participated rigorously in Smoke, Sanity, Load/Stress, Regression, End-to-End, and Integration testing.
 - Proficiently executed diverse SQL queries, encompassing DDL, DML, and DQL types, to uphold data integrity and quality standards. This proactive approach significantly contributed to efficient data modification and informed decision-making.
 - Led the design and development of dynamic Tableau visualizations for dashboards and reports, incorporating actions and filters to align with end user specifications and preferences, showcasing market trends and customer engagement effectively.
- Environment: JIRA, Confluence, MS Visio, Selenium, Amazon Redshift and S3, Oracle DB, Tableau, Postman, JavaScript, REST API, HTML, CSS, Jenkins, Aws Glue.

Data Analyst

Axis Bank - Mumbai, Maharashtra

June 2015 to August 2016

Project Description: Enhanced fraud detection with advanced machine learning models, analyzing historical and real-time transaction data. The automated system ensures scalability, efficiency, and effectiveness while delivering comprehensive fraud reports and analytics, ultimately boosting customer confidence in the security and reliability of our financial services.

Roles and Responsibilities:

- Gather and integrate historical and real-time transaction data from various sources, including databases, and logs.
- Ensure data quality and accuracy, addressing any inconsistencies or missing information.
- Clean and preprocess data to remove noise, outliers, and irrelevant information. Handle missing data and perform data imputation where necessary. Standardize and transform data into a format suitable for machine learning model input.
- Conduct EDA to identify patterns, trends, and anomalies in transaction data. Visualize data to gain insights into fraud-related patterns and behaviors. Create relevant features that can enhance the machine learning models' fraud detection capabilities.
- Collaborate with data scientists to develop and fine-tune machine learning models for fraud detection.
- Assess the effectiveness of the machine learning models using metrics like precision, recall, F1-score, and ROC AUC.
- Maintain documentation for data analysis processes, model configurations, and findings for reference and knowledge sharing.

Environment: Amazon kinesis data streams, Amazon S3, Amazon DynamoDB, Amazon Glue, AWS SageMaker, Amazon API Gateway, Swagger, AWS Cognito, Amazon CloudFront, AWS Amplify, Amazon QuickSight and Amazon CloudWatch, JIRA, Google Analytics, SharePoint.
