

Joe Ackerman
Jonasackerman22@gmail.com

OBJECTIVE:

I have been in Information Technology for over 25 years and have managed/worked with small, medium and large groups. I have good communications skills, very organized, self-motivated and can multitask very well.

EDUCATION & CERTIFICATIONS

- Bachelors of Information Technology in Networking, estimated completion date in 2026
- Coursera Classes: Build Intelligent Agents Using DeepSeek & N8N completed in 2025
- Associates of Applied Technology Degree in Cisco Networking (CISCO) at Clark Community College, completed in 2010
- Associates of Applied Science Degree in Data Networking & Telecommunication (DNET) at Clark Community College, completed in 2010
- Associates of Applied Science Degree in Microcomputer Support Specialist (MCSS) at Clark Community College, completed in 2009
- Associates of Arts Degree (AA) at Clark Community College, completed in 2006
- Certificate for Coaching and Teambuilding Skills Conference for Manager and Supervisors in 2004
- AWS – Certified Cloud Practitioner
- Cisco - CCNP Security Certified
- Cisco - CCNP Route and Switch Certified
- Cisco - CCNA Voice Certified
- Cisco - CCNA Design Certified
- CompTIA - A+ Certified
- CompTIA – Network+ Certified
- CompTIA – Security+ Certified
- CISSP – Certified
- Extreme – EDS Campus Fabric Certified
- Extreme – EDS Management Certified
- ITIL – Certified
- Meraki – CMNA Certified
- Palo Alto – PCCSA Certified
- Sophos – Architect Certified
- Sophos – Engineer Certified

SKILLS:

- Cloud – AWS Security Hub, Prisma Cloud, MFA, SSO, PAM
- Endpoint Security – EDR/EPP, MDM
- Firewall - Palo Alto, Prisma Access, Sophos, Cisco, CheckPoint, Juniper, Sonicwall, Fortinet, UNIFI
- Filtering - Route-Maps, Class-Maps, Policy-Maps, Policing and Shaping
- Load Balancers - CSS, CSM, ACE, F5, NetScaler, RiverBed, Kemp,
- Management - Coordinating resources, setting up time lines for projects, writing out scopes of work, communication to members of projects.
- Network Redundancy Protocols - HSRP, VRRP, GLBP, PaGP and LACP
- Networking Utilities – Aruba Central, Cisco Prime, Cisco LMS, Cisco Works, CAN, WUG, CA, NetQoS, Air Magnet, Solar Winds, Wire Shark,
- Network Security - TACACS, ISE, IPS/IDS, NAC, Source Fire, Cisco Security Manager, SMA, WSA, ASDM, ClearPass, SIEM, SOAR, DLP, Zero Trust.
- Other Things – VMWare, Linux, Windows Server, DHCP, DNS, Domains, Sites and Services
- Programming Languages – HTML, XHTML, Visual Logic, Java, Cobol, Python
- Proxy – Bluecoat, McAfee, Symantec
- Router – Cisco, Nexus, ASR; Aruba, HP, Juniper
- Routing Protocols - Static Routes, RIP, EIGRP, OSPF, ISIS and BGP
- Security Standards – HIDS/HIPS, SOX, ISO 27001, PCI, IoT, HIPPA, FIPS, ICS, HITRUST, SOC2, CIS, NIST 800-53, IoT, OT Security
- Switch – Cisco, Nexus, Aruba, HP, Juniper
- Support - Route, Switch, VoIP, Wireless, Security, WAN / LAN Engineering and Operations
- Voice/VoIP - Cisco Call Manager, Cisco Unity Server, Cisco Emergency Responder, Cisco Unified Mobility, Cisco VG224, Avaya, SIP
- VPN – Palo Alto, Sophos, SonicWall, Cisco ASA L2L, Cisco AnyConnect, Cisco IPsec, Cisco Router GRE, Cisco 3030 Concentrator,
- WAF – Akamai, F5, Palo Alto, Sophos, Cisco
- WAN Technologies - T1, MOE, DS3, OC, MAN, ATM, MPLS, Frame Relay, PPP, IPv4, IPv6, NAT, PAT, Ethernet,
- Wireless – Cisco Autonomous and Light Weight APs, Aruba, Meraki, UNIFI, Cisco, WCS, NCS, Prime, Aruba/Central, HP)
- Personal Information - I can speak German, I like to golf, hike, fly fish, sail, and ride motorcycles, President of my HOA

March 3, 2026

EXPERIENCE:

Confidential: Lead Cyber/Network Security Engineer in Portland, OR

April 2022 – Present

Full Time. My current focus is hardening and securing the network security environment for on-prem/cloud.

- AI process improvement and integration using n8n.
- Helped build cyber security team from scratch.
- Lead cybersecurity consultant and SME for \$1Billion+ IT/OT projects, overseeing threat modelling, penetration testing, control evaluation, and risk assessments across cloud, SCADA/ICS, and corporate environments, ensuring alignment with standards and compliance requirements.
- Engage with project teams to bridge business needs and existing processes with cybersecurity best practices matching our current policies and standards.
- Drove CEC to improve on standards/policies documents
 - Example would be the encryption standard that hadn't been updated prior to 2017.
- Mentored several team members, providing training on OT security, On-Prem, Cloud, etc...
- Produce empirical data which supports recommendations to the business through RFP support, technical risk assessments, threat modeling, control evaluation, and security/penetration testing in environments that span OT, IT, Cloud, Mobile, etc.
- Focused more on the network security side for policy and controls as that's my specialty.
- Responsible for conducting Semptra Managed Cloud Solutions engagements for AWS, Azure and GCP.
- Review IAM rules for AWS.
- Conduct security cloud security engagements using security hub, Checkmarx, IAM Access Analyzer, and IAM roles.
- Reviewed both IT/OT equipment before allowing into the environment:
 - Reviewed routers, switches, APs, PLTE, Radio, Satellite. From vendors like Cisco, Aruba, Juniper, Motorola, Starlink, etc...
- Major involvement in firewall migration path for enterprise including IT/OT from existing vendor to more of a vendor agnostic.
- Lead SharePoint review and security criteria for securing third party vendor SharePoint.
- Worked with joint state agency for security between large projects and information accessibility.
- Reviewed and approved multiple remote site security mechanisms including NVR, cameras, switches, gates and key access.
- Responsible for core voice upgrade review of the environment including both on prem as cloud for new system.
- Dealt with third party collection information regarding customer data and information gathering for polls.
- Reviewed and approved HR application into the environment to make sure they followed our security standards.
- Reviewed enterprise storage for the enterprise IT infrastructure.
- Lead SAP cyber security review.
- AI tools automation integration.
- Evaluated over a dozens of cloud engagements that dealt with company cloud (AWS, Azure, GCP) , vendor managed cloud, and how they would connect securely.
- ISE/ACS (TACACS)/ClearPass
 - Aruba 802.1x ClearPass training
 - ACMA Training
 - Proposed the AD integration into ACS, worked with remote engineer to facilitate the proposed configuration.
 - FTP configurations backup.
 - Device additions.
 - Troubleshoot AnyConnect issues.
 - Deployed both Sophos SSL VPN and Sophos Connect Client
- API
 - Aruba Central API integration used for rolling out configurations to multiple pieces of equipment.
 - Palo Alto scripting via API
- Cloud Security (AWS / Azure / GCP)
 - Applied cloud security best practices including IAM policies, network security rules, and encryption at rest and in transit.
 - Secured cloud workloads using least-privilege access and environment separation.
 - Assisted with cloud security reviews and remediation of misconfigurations.
 - AWS/Azure
 - CI/CD Pipeline
- Cyber Security
 - SAST, DAST & Penetration Testing Tools
 - Used SAST and DAST tools to identify vulnerabilities early in the SDLC.
 - Reviewed security scan results and worked with development teams to remediate findings.
 - Supported penetration testing efforts and tracked remediation activities.
 - Tools
 - Archer
 - Forescout

Jonas Ackerman

- Burp Suite
 - Pen testing
 - External pen testing
 - Product pen testing (using Burp Suite)
 - Engagement type:
 - Cloud
 - Vendor Managed Cloud (VMCS)
 - On-Prem
 - OT
 - NIST & CIS Controls
 - Implemented security controls aligned with NIST and CIS frameworks to strengthen application and infrastructure security.
 - Assisted in risk assessments and compliance alignment based on NIST/CIS best practices.
 - Ensured baseline security configurations and continuous control monitoring.
 - Control review:
 - NIST 800-53 Rev5 (Cloud – AWS; Azure; and GCP, VMCS, On-Prem, etc...)
 - FIPS 140-2 and 140-3
 - FedRAMP
 - SOC 2 Type 2
 - ISO 27001
 - FISMA
- Communication
 - Coordinated directly with my network/security engineers and the business need.
- Documentation
 - IRIS
 - Build/Update Visio's diagrams.
 - Service provider information.
 - Circuit information.
- Firewall
 - Palo Alto AIOps integration
 - Palo Alto Threat Profile configuration migration
 - Deployed Palo Alto Firewalls both stand alone and through Panorama
 - Deployed a VPN solution (Global Protect) via Panorama with 1x 3260 and 2x 5250's.
 - Palo Alto – Mentored/Trained employees on using PA's.
 - Palo Alto – Wildfire optimization
 - Deployed SonicWall firewalls
 - Deployed Sophos firewalls
 - SD-WAN configured for firewalls
 - Coordinated all password changes for all security devices in the environment.
 - Proposed firewall changes to harden the environment.
 - Configured new firewall rules, modified, monitored.
 - Added devices into ACS
 - Added devices into ClearPass
 - Configured new FortiGates through FortiManager
 - Migration off of Sonicwall to Sophos XG 450
 - Enable of Sophos endpoint protection
 - GitHub for script revision
- Identity & Access Management (SSO, MFA, RBAC)
 - Implemented SSO and MFA to strengthen user authentication and access security.
 - Designed role-based access controls (RBAC) following least-privilege principles.
 - Managed user access reviews and identity lifecycle processes.
 - ISE/ACS (TACACS)/ClearPass
 - Added devices to exception list.
 - Validated/Tested device issues within our network using ISE for 802.1x issues.
- ITIL
 - Leveraged ITIL to implement request/incident handling into SNOW.
 - Modified new process for improvements.
- Load Balancer
 - F5 iRules
 - F5 Big IP for external NAT
 - VIPs, pool, members, health monitors.
 - F5 LBM
 - F5 GTM

Jonas Ackerman

- F5 ASM
- Monitoring
 - Splunk Training – What is Splunk, Intro to Splunk, Splunk 4 Rookies
 - Aruba Central
 - Integrate all the network/security into Orion for monitoring and reporting.
 - Modified monitoring to specify a certain group being created for unmanaged devices.
 - Designed hierarchal structure to provide logic to structure.
 - Requested the inclusion of netflow information.
 - Firemon for device monitoring and threat reporting.
 - Pushed global configuration changes.
 - Splunk Dashboards
- NMS
 - Aruba Central, site management for all their switches, routers, and Aps.
 - Planning the migration from version 2.2 to 3.x.
 - AP Migration off of remote WLC to centralized WLC in data center
 - Prime integration into FTP for backups.
 - Installed WLC into Prime for central management.
- OWASP Top 10 & ASVS
 - Identified and remediated common web application vulnerabilities such as SQL Injection, XSS, CSRF, and authentication flaws using OWASP Top 10.
 - Applied OWASP ASVS guidelines to validate secure design, development, and testing practices.
 - Supported secure coding standards and security reviews during application development.
- SaaS
 - AWS; Setup network in AWS and built the VPN connection between our business to AWS.
 - Azure; Setup network in Azure and built the VPN connection between our business to Azure.
- Secure APIs & Microservices Architecture
 - Secured REST APIs and microservices using authentication, authorization, encryption, and API gateways.
 - Implemented rate limiting, input validation, and secure communication between services.
 - Supported secure service-to-service communication in microservices environments.
- Security Logging, Monitoring & Incident Response
 - Enabled centralized security logging and monitoring using SIEM tools.
 - Assisted in security incident detection, investigation, and response activities.
 - Created alerts and dashboards to track security events and suspicious behavior.
 - Fortinet firewall policy configuration, L2L configuration, new firewall builds out.
 - Palo Alto firewall policy configuration, L2L configuration, new firewall builds out.
 - Found vulnerabilities, made purposed recommendations to resolve, implemented.
 - Kept up to date with software vulnerabilities.
 - Used RedSeal for performing network modeling and risk assessment.
 - Cleaned up legacy firewall rules.
 - Built new rules in organized order.
 - Updated software to FortiManager, FortiAnalyzer, and FortiGate firewalls.
- SIEM
 - Splunk
- SSL VPN/IPSec Client
 - Currently were pushing software via SCCM to the end clients, was purposing Head End design configuration.
- Switch
 - Replaced 4x 3650CX remote switches; configured for QoS, added to MPLS
 - Modified a single L2 environment to using L3 SVIs running on top
 - Installed, configured, migrated 2x Aruba 3810, 2x 2930M, 2x 2930F
 - Configured multicast for VoIP.
- WAF, Bot Protection & Traffic Security
 - Configured Web Application Firewalls (WAF) to protect applications from common attacks.
 - Implemented bot protection and traffic filtering to prevent abuse and DDoS threats.
 - Monitored traffic patterns and tuned security rules for performance and protection.
 - Akamai Training – Akamai Web Application & API Protection - AMER
 - F5 ASM Training – Configuring Big-IP Advanced WAF v16.1
 - F5 Training – Administering BIG-IP v16
 - Setup configured/managed Palo Alto Threat Prevention/WAF
 - Setup configured/managed F5 ASM/WAF
 - Setup configured for Sophos
 - Cortex XDR Threat Detections
- WAN (Service Provider)
 - Ordered new circuits.

- Modified/configured router/firewall to support new WAN circuits.
 - Troubleshooted circuits/lines.
 - AWS
 - Azure
- Wireless
 - Added maps into Prime.
 - Added APs into both WLC and Prime.
 - Built pre-AP deployment template for future installation.
 - Migrated off of WLC to Aruba Central
 - Tested and deployed UNIFI access points.
 - Deployed Aruba APs
- vmWare
 - ESXi installation, configuration and upgrade
 - UCS installation, configuration and upgrade

Business IT Source (BITS): Network Security Architect in Beaverton, OR

September 2013 – April 2022

Full Time. My responsibilities are focused on network security for the North/South America. Which has over 30 firewalls and 8 data center firewalls.

- AnyConnect
 - Migrated from 3.x to 4.x
 - Built new AnyConnect VPN profiles
 - Add, removed, and modified profiles
 - Documented
- Firewall
 - VPN firewall migration from legacy 8.2 to 9.6 code
 - NAT modifications to better conform to the existing list
 - Added netflow information into the firewalls
 - New firewall installations
 - Configured multi vsys
 - Old firewall migrations (including single-context to multi-context)
 - Setup failover firewalls (active/active)
 - Setup SSH, removed telnet
 - Standardized service-policy
 - Standardized SNMP-server information
 - Standardized management access
 - Standardized aaa-server
 - Standardized ICMP
 - Standardized banner messages
 - Standardized username & passwords
 - Standardized security levels
 - Standardized access-lists
 - Documented
- IPsec VPN
 - Built new IPsec VPN profiles
 - Add, removed, and modified profiles
 - Documented
- Legacy IPS
 - Configured and deployed (managed by IME)
 - Modified rules
 - Updated virus definitions
 - Documented
- LMS
 - Added firewalls in for configuration backup (including multi-context)
 - Used for global configuration deployments
 - Documented
- Load Balancers
 - F5
 - Configuration of VIPs, pool, members, health monitors.
 - Added devices into ACS
 - LTM implementation

Jonas Ackerman

- Orion
 - Added security devices in for status monitoring
 - Added security devices in for netflow monitoring
- Power
 - Specified power equipment for L6-30 twist locks for larger powered equipment
 - Made some CAT6 patch cords in a pinch.
 - Ordered grounding for racks.
- Prime
 - Upgraded prime from 3.0 to 3.1
 - Added device pack 1 for ASA support
 - Added all the firewalls into Prime for configuration back up
 - Used for global configuration deployments
 - Documented
- Sourcefire
 - Designed the rollout
 - Configured the SFR, added them to the SMC
 - Documented
- Switches
 - Configured new switches
 - Configured Internet switches
- Training
 - CCNP Security Suite refresh
 - WSA training with Cisco
 - SFR training with Cisco
- WAN (Service Provider)
 - Migrated WAN circuits/lines
 - Troubleshooted circuits/lines
 - Ordered new circuits/lines
 - Documented
- WSA/SMA
 - New installation, both appliances and VMs
 - Configured Radius authentication
 - Sync'd with SMA
 - Added URLs to white list
 - Documented
- Kept up on all bug and vulnerability alerts

Nike: Lead Network/Security Engineer Beaverton, OR

February 2013 – September 2013

Contract ended, ran out of money 30+ laid off. My responsibilities were focusing on bridging the gap between the business needs and IT. I worked on the enterprise environment, where I led/coordinate work that needed to be done with 70+ other engineers across the world including our operational support group. I also helped in assigning direction and goals of where we are, where were going, and what our current priorities are. Like I said before I wear many hats such as: project manager, architect, and engineering. Then I break out roles of responsibilities using project scopes, deployment objectives to implement new technology, managing vendors, researching new technologies, and vet engineering implementation.

- Cisco VoIP implementation.
- Migrated off of the old PIX firewalls that supported the Avaya infrastructure with reduced outage time
- Avaya upgrades to WHQ campus.
- F5 GTM installation.
- Upgrades to WHQ campus backbone from 1Gb to 10Gb to support VoIP
- Upgraded, new security standards to firewalls and VPNs
- Data center design and upgrade for digital.
- The Integration of MPLS into our networking infrastructure.
- Local live event for CEO at headquarters.
- Global live event from headquarters.
- Mini switch testing and installation to help prevent future loop issues in the network.
- Security network optimization for Nikes WHQ networks.
- Coordinated efforts between Network Engineers and business customer to resolve a slowness issue effecting a site.
- Life cycled legacy gear to new supported equipment globally.
- Migration off of telnet to SSH for all network devices globally.
- Lab build out for testing customer applications and new networking equipment before it goes into production.

Jonas Ackerman

Full Time, left for the chance to work at Nike. My responsibilities were to coordinate large Enterprise environment changes for Providence Health Services. That includes: working with onsite directors, managing local resources, leading projects, evaluating technical options, project designing and deployment of new technology, designing and implementing of life cycle replacements, VoIP designs and deployments, designing new sites and deploying them, managing vendors, designing and upgrading of the network infrastructure.

- Optimizing of the ASA firewalls
- Remote site cleanup and standardization
- Migration of equipment from Telnet to SSH for all of Oregon
- Hardened the security on network devices
- Core Upgrade Project for Oregon
 - Installation, configuration, upgraded; All the Network Analysis Modules (NAM) for Oregon
 - Upgrading power to offer backup as well as redundancy for more critical systems
 - Installation, configuration and upgrading of WLC from WiSM1 to WiSM2 and 4404 to 5508
 - Designing map layouts and configuring of new APs to WLC using heat maps
 - Upgraded the 6500 to E series chassis
 - Upgraded fiber and copper layouts
 - Updated documentation for sites using Visio and excel
 - Pruning trunk links, adding redundant links and incorporating ether channel
 - Standardized and upgraded CF to support new IOS image and package files
 - Researched other technologies to assist in the migration off legacy technology
- Lead, designed, researched and tested; New hardware to be used in our environment as standard equipment
- Lead, designed, implemented; Upgrade of the wireless infrastructure from autonomous to light weight APs
- Lead, designed, implemented; Life cycle hardware replacements for campus and remotes sites
- Lead, designed, implemented; Multiple remotes sites build outs
- Lead, designed, implemented; Multiple VoIP deployments in both remote sites and core locations
- Integrated MPLS into our networking infrastructure to support PCI
- Lead, designed, and implemented the move of Providence Enterprise/Oregon Data Center from Oregon to Washington
 - Migrated over 150 L2L VPN connections off of the Cisco 3030 to the Cisco ASA in Washington
 - Validated current firewall rules before migrating to Washington
 - Migrated SSL VPN connections off of the Juniper in Oregon to Washington
 - Migrated the load balancers off of the Cisco CSS/CSM/ACE to ACE in Washington
 - Configured the ports for the new servers/chassis
- Lead, researched and designed VSS for a large infrastructure.
- Lead, coordinated and implemented a fix with our carriers to improve multiple site connectivity
- Completed training for Palo Alto training
- Promoted after one year of service
- Finished my CCNP Route & Switch certification
- Provided training to my fellow Engineers

Contract, left for full time position at Providence. My responsibilities included both supporting the campus and the data center for the Western hub of the United States. Provide training to my fellow colleagues and other IT members in different groups. Designed and planned upgrades of new network and telecom hardware. Planned out capacity for future hardware use. Monitor and maintained networking components using monitoring tools. Managed other vendor in projects related to Wilsonville. Investigate future technologies that might better suit are networking infrastructure. Manage the design and data cable infrastructure. Provide operation support. Make sure devices are secure. Troubleshooting skills. Familiar with both ITL and SOX.

- Helped in the upgrading the data center core to Nexus
- Added 5000 series switches into top of rack solutions
- Migrated the site from autonomous APs to lightweight using WLC
- Helped with the installation of the Cisco Call Manager, Unity Server, and Emergency Responder
- Helped in the migrating the entire site to VoIP
- Migrated 6500 to 6500e chassis in the data center
- Updated the IOS images for both the campus and data center
- Updated the configurations for both the campus and the data center
- Updated all the documentation for both campus and the data center
- Used F5 load balancer for servers
- Integrated MPLS into our networking infrastructure
- Finished 40 hours of CCNP Route & Switch training

- Upgraded the entire campus access layer to use ether-channel
- Upgraded Engineering template configuration, (example to prevent against Man-in-the-Middle attacks)
- Provided training to my fellow Engineers

Eleven Wireless: Network Engineer in Portland, OR

May 2008 – August 2008

Full Time, left to work for enterprise company. My responsibilities included configuring device before physically deploying them to remote sites then working with on site personal to bring up a site. Setup DHCP and DNS. Supported large networks for hospitality services. IP subnetting. Ghosting computers. Server 2003 admin for company. Setup SSH for secure connections for remote devices,

- Setup lightweight APs and connected them back to WLC
- Designed and deployed APs based on heat maps
- Migrate off autonomous APs to lightweight for a site
- Designed, deployed and installed new sites
- Setup SNMP printer management software to maintain over 100 printers worldwide
- Diagramed and setup remote site networking infrastructure for hospitality services
- Provided training to my fellow Engineers

Clark College: Network Administrator in Vancouver, WA

July 2007 – May 2008

Full Time. My responsibilities included making sure the lab area was functioning and helping students with questions. Installing and configuring Cisco routers and switches. Helped student with CCNA questions and IP subnetting. Setup WAPs using lightweight and autonomous APs also attached them to WLC. Installing and configuring: XP, Server 2003, SUSE and UBUNTU, setup domains and workgroups, configured DNS and a records, configured DHCP for static bindings, set up FTP and TFTP servers, setup file and printer sharing, ghosted students work computers. Terminated RJ-11, RJ-45 and RG-6, and made crossover, rollover and straight-throw cables, fiber ST and SC, configured VPN through Windows XP, provided remote assistance, remote desktop, telnet and SSH support, cleaned out the routers and switches configurations.

- Finished 40 hours of CCNP Security training
- Finished 40 hours of CCNP Voice training
- Assisted other students to get their CCNA and CCNP
- Setup labs using Cisco Call Manager
- Setup labs for CCNA and CCNP students

Circuit City: Senior In-Home Technician; Portland, OR

August 2006 – January 2008

Full Time. Company went out of business. My responsibilities included: Set up wired and wireless networks for small business and homes, setting up printing wired and wireless, VLSM, file and printer sharing from server or peer PC, setup workgroups and domains for businesses and homes, configured DNS, configured DHCP, setup FTP and TFTP servers, setup static and dynamic IP address, SAN both wired and wireless, fox and hound for cable determination, troubleshooted VPN through Windows XP, terminated RJ-11, RJ-45 and RG-6, and made crossover cables, setup DSL Internet, Cable Internet, Satellite Internet and dial-up Internet. Provided help-desk with remote desktop, over the phone as well as on-site.

NetIT: Senior In-Home Technician; Vancouver, WA

November 2004 – August 2006

Full Time. My responsibilities included: Installing and configuring 98, ME, 2000, XP, Vista and MAC and Office 2000/03, set up wired and wireless networks for small business and homes, map network drives, setting up printing wired and wireless, file and printer sharing from server or peer PC, setup workgroups and domains for businesses and homes, VLSM workgroups and domains for businesses and homes, configured DNS, configured DHCP, setup FTP and TFTP servers, setup static and dynamic IP address, SAN both wired and wireless, ghosted customers computers, using both static and dynamic IP addressing, fox and hound for cable determination, terminated RJ-11, RJ-45 and RG-6, and made crossover cables, setup DSL Internet, Cable Internet, Satellite Internet and dial-up Internet. Provided help-desk support over the phone as well as on-site.

Best Buy: Senior In-Store Technician; Portland, OR

July 2001 – November 2004

Full Time. My responsibilities included: Set up wired and wireless networks for small business and homes, setting up printing wired and wireless, VLSM, file and printer sharing from server or peer PC, setup workgroups and domains for businesses and homes, configured DNS, configured DHCP, setup FTP and TFTP servers, setup static and dynamic IP address, SAN both wired and wireless, fox and hound for cable determination, troubleshooted VPN through Windows XP, terminated RJ-11, RJ-45 and RG-6, and made crossover cables, setup DSL Internet, Cable Internet, Satellite Internet and dial-up Internet. Provided help-desk with remote desktop, over the phone as well as on-site.
