

KAY AHMODU

Enterprise and Program Architect

kareemahmodu8@gmail.com | (251) 277-6326 | 957 Broadway, Bayonne, New Jersey 07002

PROFESSIONAL SUMMARY

Enterprise and Program Architect with over fifteen years of experience owning target-state architecture, principles, guardrails, and decision governance across application, data, integration, security, cloud, and DevOps domains. Experienced reviewing and approving High-Level Designs and Low-Level Designs for major workflows and epics, driving Non-Functional Requirements for performance, resiliency, security, scalability, and maintainability while keeping patterns consistent across delivery pods. Skilled translating Business Requirements Documents into architecture-relevant requirements and sequencing, supporting Lean Launchpad and Minimum Viable Product shaping with product owners and functional leadership. Proficient setting Application Programming Interface and integration patterns, versioning, contracts, system boundaries, and data ownership with data model evolution, migrations, governance, audit, retention, and privacy. Experienced defining security architecture guardrails, threat modeling approaches, and compliance considerations while maintaining architecture risk registers with mitigation plans. Strong background in Continuous Integration and Continuous Deployment, environment strategy, release and rollback patterns, observability standards including logs, metrics, and traces, Service Level Objective thinking, and incident readiness. Experienced defining artificial intelligence-assisted delivery within the Software Development Life Cycle ensuring quality, security, and traceability with standardized guardrails and measurement. Skilled chairing architecture working groups, mentoring solution architects and senior engineers, and communicating decisions, rationale, risks, and impacts with crisp stakeholder management.

CORE COMPETENCIES

- Target-State Architecture, Principles, Guardrails, and ADR Decision Governance
- Application, Data, Integration, Security, Cloud, and DevOps Domain Alignment
- HLD/LLD Review and Approval, Pattern Consistency Across Delivery PODs
- NFRs: Performance, Resiliency, Security, Scalability, and Maintainability
- API/Integration Patterns: Versioning, Contracts, Boundaries, and Data Ownership
- Data Model Evolution, Migrations, Governance, Audit, Retention, and Privacy
- Security Architecture: Threat Modeling, Compliance, and Risk Register Management
- CI/CD, Environment Strategy, Release/Rollback, and Observability Standards
- SLO Thinking, Logs/Metrics/Traces, and Incident Readiness
- AI-First Enablement: SDLC Integration, Guardrails, and Quality Measurement
- BRD Translation, LLF/MVP Shaping, and Stakeholder Tradeoff Decisions
- Architecture Working Group Chair, Mentorship, and Maturity Elevation

PROFESSIONAL EXPERIENCE

Enterprise and Program Architect – Governance, Integration, and AI Enablement

June 2017 – Present

Rehoboth Limited Liability Company, Bayonne, New Jersey

- Owned target-state architecture, principles, guardrails, and decision governance including Architecture Decision Records and decision logs ensuring alignment across application, data, integration, security, cloud, and DevOps for 15 enterprise programs
- Reviewed and approved High-Level Designs and Low-Level Designs for major workflows and epics, keeping patterns consistent across delivery pods while driving Non-Functional Requirements for performance, resiliency, security, scalability, and maintainability
- Established baseline templates for logging, tracing, and error handling alongside reference implementations that reduced rework by 40 percent and standardized delivery quality across all engineering teams
- Translated Business Requirements Documents into architecture-relevant requirements and sequencing, supporting Lean Launchpad and Minimum Viable Product shaping with product owners and functional leadership, presenting tradeoffs and driving decisions with stakeholders
- Set Application Programming Interface and integration patterns including versioning, contracts, system boundaries, and data ownership while defining data model evolution, migrations, versioning, and governance with audit, retention, and privacy controls
- Defined security architecture guardrails, threat modeling approach, and compliance considerations, maintaining architecture risk register with mitigation plans and owners across 25 concurrent delivery initiatives
- Defined artificial intelligence-assisted delivery integration within the Software Development Life Cycle without breaking quality, security, or traceability, standardizing artificial intelligence guardrails, templates, and measurement including cycle time, rework, and defect leakage metrics

Solution Architect – Delivery Oversight, NFRs, and Operational Excellence

May 2012 – May 2017

Trok Technology Limited Liability Company, New York, New York

- Provided solution architecture oversight across delivery pods for enterprise programs supporting 50,000 active users, reviewing High-Level Designs and Low-Level Designs and maintaining pattern consistency across 12 concurrent program workstreams
- Drove Non-Functional Requirements for performance, resiliency, security, scalability, and maintainability, establishing baseline templates for logging, tracing, and error handling with reference implementations adopted across all delivery teams
- Set Continuous Integration and Continuous Deployment pipeline standards, environment strategy, and release and rollback patterns while defining observability standards for logs, metrics, and traces with Service Level Objective thinking and incident readiness
- Defined Application Programming Interface and integration patterns with versioning, contracts, and system boundary documentation, governing data model evolution, migrations, and governance including audit and retention policies
- Translated business requirements into architecture-relevant specifications and sequencing, supporting product owners in Minimum Viable Product shaping and presenting tradeoff analysis to client stakeholders for clear decision-making
- Maintained security architecture guardrails with threat modeling and compliance considerations, managing architecture risk registers with mitigation plans that improved risk posture by 45 percent
- Chaired architecture working groups aligning architects, technical leads, product owners, quality assurance, and DevOps while mentoring solution architects and senior engineers to raise architecture maturity across the organization

Solutions Architect – Integration, Data Strategy, and Security Patterns

October 2010 – April 2012

Envicel Limited, Lagos, Nigeria

- Designed solution architectures for four enterprise client programs, establishing Application Programming Interface integration patterns, data model designs, and security architecture guardrails aligned with enterprise standards
- Reviewed High-Level Designs ensuring pattern consistency, driving Non-Functional Requirements for performance, security, and scalability across delivery workstreams
- Configured Continuous Integration and Continuous Deployment pipelines with environment strategy and observability standards for logs, metrics, and monitoring across development and production environments

- Produced Architecture Decision Records, tradeoff analysis, and risk documentation communicating architectural decisions and rationale to engineering teams and business stakeholders

Software Architect and Technical Lead – Enterprise Applications and DevOps

March 2008 – September 2010

ArchOps Engineering Limited, Lagos, Nigeria

- Led architecture and delivery for three enterprise application programs, defining application architecture patterns, integration designs, and baseline templates for logging, tracing, and error handling across engineering teams
- Translated business requirements into technical specifications and sequencing, collaborating with product owners to shape Minimum Viable Product scope and present tradeoff options to business stakeholders
- Established Continuous Integration pipelines, release management processes, and environment promotion strategies that improved deployment consistency and release quality by 40 percent
- Defined security controls and compliance considerations for enterprise application architectures, maintaining risk documentation and mitigation plans for all governed delivery initiatives
- Mentored senior engineers on architecture patterns, Non-Functional Requirements, and operational excellence standards while communicating decisions, rationale, and impacts to cross-functional teams

EDUCATION

Bachelors

CERTIFICATIONS

- ☐ The Open Group Architecture Framework Certified Enterprise Architect
- ☐ Microsoft Azure Solutions Architect Expert
- ☐ Amazon Web Services Certified Solutions Architect – Associate
- ☐ Google Professional Cloud Architect
- ☐ International CyberSecurity Institute Certified Network Security Specialist
