

KRISHNA REDDY

Richmond, TX 77407

krishnareddy5b43c_mah@indeedemail.com

+1(309) 2208039

- Over 9+ years of IT experience worked in all phases of Software Development Life Cycle (SDLC) from requirements gathering to the production and successfully implemented several projects with responsibilities and Developed User Interface (UI) applications and professional web based technologies using HTML, XHTML, CSS, JavaScript, Ajax, Angular as developer at different locations.
- Developed User Interface (UI) applications and professional web applications using HTML, XHTML, CSS2/CSS3, JavaScript, Ajax, Angular, Node JS, Express JS, Bootstrap, JSP, Mongo DB, DynamoDB, NPM, GIT, MVC, JSON, XML, and Jira.
- Experienced in Configuring and deploying instances on AWS, Data centers, also familiar with EC2, Cloud watch, Cloud Formation, Lambda, Glue ETL jobs and managing security groups on AWS.
- Wrote Python/PySpark scripts to manage AWS resources from API calls using BOTO3 SDK and also worked with AWS CLI.
- Worked with Ansible playbooks to launch AWS instances and used Ansible to manage web applications, configuration files, used mount points and packages.
- Extensive experience in developing and maintaining build, deployment scripts for test, Staging and Production environments using ANT, Maven, Shell and Perl Scripts.
- Extensively worked on CI/CD pipeline for code deployment by engaging different tools (Git, Jenkins, Code Pipeline) in the process right from developer code check-in to Production deployment
- Experience in different Software development methodologies like Agile-Scrum and experience working with Agile, Waterfall methodologies and the application development.
- Designed Use Case Diagrams, Class Diagrams and Sequence Diagrams and Object Diagrams to model the detail design of the application using UML and good knowledge on Object Oriented Analysis and Object-Oriented Design, Modeling Applications with Use case, Class Diagrams & Sequence Diagrams.
- Knowledge on NoSQL databases like MongoDB and its advantages over relational DB's(RDBMS) like NoSQL databases, Dynamo DB
- Worked with tools like JUnit and Mockito for developing test cases and testing phases including Integration Testing, Unit Testing.
- Experience in Core Java concepts like OOPS, Exception Handling, Collections. Worked on Karma for testing reports. Created and executed both load and functional tests for web services.
- Proficient in handling web and application servers in creating Domain, configuring connection pool, JMS, deploying applications on Web Logic, WebSphere, Apache Tomcat.
- Worked on various IDEs like STS, Eclipse, Postman, Atom and Microsoft Visual Studio Code, PyCharm.
- Used Continuous delivery / Continuous Integration (CD/CI) tools Docker, Jenkins to deploy this application to AWS along with Bitbucket for Version Control of code for incremental development.
- Worked with entire system life cycle (SDLC) including Analysis, Design,

Programming, Building, Testing, Debugging, Maintenance and Enhancements of multi-tier, database driven J2EE application.

- Deep understanding of Amazon Web Services (AWS) environment and good knowledge of AWS services like Elastic Compute Cloud (EC2), Elastic Container Service (Docker Containers), S3, Athena, Data Sync, Kinesis and Cloud Formation.
- Worked on a ETL tools like AWS ETL Glue Job for data analytics and data analysis.
- Expert Communication, Interpersonal, and Organizational skills and quick learner with sound technical, analytical skills and excellent written and verbal communication skills.

Work Experience

Senior Full Stack Java Developer

Charles Schwab - Chicago, IL

April 2021 to Present

- Orchestrated software development using agile methodologies, particularly Scrum and Kanban, supported by tools like Atlassian for task management.
- Drove backend development using Java Spring Boot, utilizing Maven for build management and Spring Data JPA for data access.
- Developed and integrated RESTful services using Spring Boot, with Swagger for API documentation and Postman for API testing.
- Handled data storage using SQL (PostgreSQL) and NoSQL (DynamoDB), integrating JPA and Hibernate for object-relational mapping.
- Conducted automated testing with JUnit and Mockito for backend, and Protractor and Selenium for Angular-based front-end testing.
- Applied best practices in RESTful API development with OAuth2, JWT for authentication, and Spring Security for authorization.
- Developed scalable backend services with Spring Boot, utilizing a microservices architecture and RabbitMQ for message brokering.
- Utilized the design of the web application using Angular, HTML5, CSS3, TypeScript, with Sass for advanced styling and Bootstrap for responsive design.
- Ensured cross-browser compatibility and responsive design using Bootstrap and media queries.
- Developed dynamic user interfaces using Angular, creating reusable components and services to enhance code maintainability and modularity.
- Leveraged Angular Forms for client-side form validation and implemented reactive forms for real-time data binding and validation.
- Integrated Angular HttpClient to make HTTP requests and interact with backend RESTful APIs.
- Optimized performance of Angular frontend and Spring Boot backend, using JProfiler for Java profiling and New Relic for application performance monitoring.
- Integrated Angular libraries such as NgRx for state management, RxJS for reactive programming, and Angular Material for UI components.
- Employed jQuery for enhancing front-end functionalities, such as DOM manipulation, event handling, and Ajax calls, complementing the Angular-based development.
- Implemented microservices architecture with Spring Boot, Docker for containerization, and Kubernetes for orchestration.

- Managed application deployment on AWS, utilizing EC2, S3, RDS, and automated infrastructure deployment with CloudFormation and Elastic Beanstalk.
- Established CI/CD pipelines using Jenkins, integrating with GitLab for continuous integration and deployment.
- Managed source code versions and collaborative development using SVN (Apache Subversion), ensuring efficient team collaboration and code integrity throughout the project lifecycle.
- Set up AWS CloudWatch for monitoring, complemented by ELK Stack for logging and Grafana for visualization.

Full Stack Java Developer

State of NC - Raleigh, NC

March 2020 to March 2021

- Developed applications using the spring framework, leveraging features such as Spring Dependency Injection (Spring IO), Spring JDBC, Spring Security, and Spring Boot.
- Developed Java EE components using Spring Boot, Spring IOC, Spring transactions, and Spring security modules.
- Created RFP (Request for Proposal) microservice, providing RESTful API and RAML utilizing Spring Boot with Microservices.
- Created and managed microservices as part of a strategy for gradually replacing a core monolithic application while simultaneously adding business features.
- Developed RESTful web services with Spring Boot support for data transfer between internal systems and various applications.
- Performed CRUD operations in MongoDB, handling database access and data transmission based on RESTful web service.
- Used Hibernate/JPA2 in the persistence layer, writing hibernate mappings using Annotations, HQL, Criteria, and Named Queries.
- Developed unit tests using JUnit and Mockito for Microservices enhancements and developments.
- Managed internal release processes, including creating JIRA tickets for releasing tested UAT code into production environments.
- Utilized Azure App Service and Azure Kubernetes Service (AKS) for the deployment of websites and dynamic web applications.
- Managed Azure VMs, Azure SQL Database, Azure Security Center, and Azure Load Balancer within a virtual network environment.
- Developed Azure Functions to provide custom logic extensions to Azure services.
- Used Git for source version control, resolving code conflicts, and merging codebases.
- Participated in Crucible code reviews for merging code into production.

Full Stack Java Developer

Intuit - Mountain View, CA

February 2018 to February 2020

- Implemented Java EE components using Spring Boot, including Spring IOC, Spring Transactions, and Spring Security.
- Developed and tested RESTful APIs using Spring Boot, ensuring efficient data extraction and integration.
- Designed and implemented REST web services using JAX-RS and Spring REST; created client applications for RESTful web service consumption.
- Worked with Hibernate/JPA for entity mapping, including HQL, HSQL, Named Queries, Criteria, and Projections.

- Developed complex SQL queries and stored procedures using JPA as ORM framework for MySQL database interactions.
- Managed DB2 database operations, writing SQL queries, stored procedures, and integrating queries into DAO.
- Leveraged MySQL for application data management and wrote PL/SQL procedures for various data operations.
- Implemented routing and navigation within Angular applications using Angular Router, creating dynamic and user-friendly navigation experiences with lazy loading for optimized performance.
- Optimized Angular applications for improved performance, including lazy loading modules, ahead-of-time (AOT) compilation, and minimizing bundle size.
- Ensured web application security by implementing best practices like cross-site scripting (XSS) protection and input validation.
- Configured Azure resources, including Azure Virtual Machines, Azure SQL Databases, and managed access using Azure Active Directory.
- Executed migration tests and use cases for Azure cloud deployment, optimizing for both public and private IP ranges to enhance development productivity.
- Utilized JavaScript and AJAX for querying Elasticsearch indices formatted and displayed JSON results using HTML and CSS.
- Developed test cases using JUnit Framework, incorporating Mockito, Easy Mock, Spring JUnit Runner, and JMeter.
- Managed source code using BitBucket; used Ant Scripts for EAR file generation and Jenkins for continuous integration and delivery.
- Implemented application logging with Log4j and managed software defects effectively.

Java Developer

Equifax - India

September 2014 to August 2017

- Designed, implemented, and tested Spring Domain Models using Core Java for service layers.
- Integrated Spring framework with Hibernate for efficient database operations.
- Managed application data using Oracle 10g database for storage and retrieval.
- Implemented procedures, packages, triggers, and joins in PL/SQL and SQL for database retrieval, created DDL and DML scripts for database table creation and management.
- Managed object loading and configuration using Hibernate.
- Optimized database queries and data access layer using Spring Data JPA, improving application performance.
- Developed the presentation layer using JSP, HTML, DHTML, CSS, AJAX, and JavaScript.
- Assisted in Cactus testing using JUnit and developed automation scripts for UI testing.
- Developed a web-based application following Agile methodologies with a focus on Extreme Programming practices.
- Actively participated in design specification reviews with Business Analysts.
- Involved in the design and development of web components using Spring framework, JSP, and Servlets.
- Integrated third-party APIs using REST; developed RESTful APIs with Spring Boot, enhancing functionality and user experience.
- Implemented Spring Security for API endpoint protection, enabling role-based access control and authentication.

- Worked on Single Sign-On integration for enhanced user authentication security.
- Developed technical design documents, including UML diagrams and reverse engineering code.

SQL Database Administrator

Nastech - Hyderabad, India

June 2013 to August 2014

Responsibilities:

- Maintain and administer Microsoft SQL Server databases (production, development, and QA)
- Create complex database queries, indexes, and stored procedures
- Troubleshoot and resolve DB performance issues
- Monitor SQL servers for excessive loads and contention that may impact performance
- Test and plan upgrades to the SQL server environment
- Develop, test, and administer database security procedures and recovery procedures
- Install and upgrade SQL Server database instances in all environments.
- Perform data analysis, SQL optimization, database tuning, and general database reliability analysis.
- Design, install, and configure Microsoft SQL Server database software and related products in clustered and non-clustered environments.
- Create, edit, and implement database models, e.g., OLTP, data warehouse, and

Education

Masters

Illinois State University

2017

CS bachelors

KL University

2013

Skills

- Git
- APIs
- XML
- Maven
- Agile
- Java
- Web Services
- JavaScript
- Jira
- SVN
- MySQL
- Jenkins
- REST

- SDLC
- Test Cases
- Scrum
- CSS
- Docker
- Bootstrap
- Unit Testing
- AWS
- JUnit
- Ant
- Angular
- Software Development
- JSON
- Node.js
- Scripting
- Microsoft SQL Server
- User Interface (UI)
- Web services
- Unit testing
- AJAX
- GitHub
- Test-driven development
- SOAP
- React
- Continuous integration
- MVC
- MongoDB
- Microservices
- Hibernate
- Software development
- NoSQL
- Front-end development
- UI
- Spring
- PostgreSQL
- CI/CD
- GraphQL
- DevOps
- HTML5
- Selenium

- Test automation
- Computer science
- Kafka
- S3
- Kubernetes
- DynamoDB
