+1(201)708-8584

Seasoned Business System Analyst with 8 years of proven expertise in delivering data-driven insights and optimizing processes for diverse stakeholders in the banking domain. Proficiency in requirements analysis, cross-functional collaboration, and translating intricate business needs into innovative, impactful solutions, including risk assessment, fraud detection, and compliance. A dedicated professional committed to driving growth and enhancing organizational performance through strategic analysis and problem-solving focusing on banking and financial services, encompassing credit underwriting, loan origination, and customer relationship management.

- Comprehensive knowledge of various regulatory acts, including Financial Intelligence Centre (FIC) Act, Bank Secrecy Act (BSA), Sarbanes Oxley Act, General Data Protection Act (GDPR), Basel I, II, III, FinCEN, Risk Base Pricing Notices (RBPN) Act, and a range of compliances such as Anti Money Laundering (AML), Know your Customer (KYC), Customer Due Diligence (CDD), Financial Action Task Force (FATF) Act, Foreign Account Tax Compliance (FATCA) Act.
- Contributed to all phases of the Software Development Life Cycle (SDLC) in multiple projects by working collaboratively with the Business Users, Key Business Stakeholders, Subject Matter Experts (SMEs), Project Managers (PMs), Scrum Master, Architects, Testers, Developers, analysts, and successfully delivered end-to-end business solutions by facilitating important meetings and worked in traditional Waterfall and Agile Methodologies such as Agile-Scrum, Scrumban, Kanban, and SAFe.
- Extensive experience in requirement gathering including Brainstorming, JAD Sessions, Document Analysis, Interviews, Focus Groups, Workplace Observation, Interface analysis, Requirements Workshops, and comprehensive marketing Analysis.
- Aided project managers in conducting comprehensive Cost-Benefit Analyses, Feasibility Studies, Impact analyses, root cause analyses, SWOT analyses, risk analyses, and ROI Analyses to thoroughly evaluate and authenticate the needs of the project.
- Diligently performed thorough in-depth GAP analysis and Business Process Mapping, comprehensively understanding the AS-IS and TO-BE business processes, and expertly identifying source-to-target mapping (STM) and transformation logic.
- Created several artifacts, including Statement of Work (SOW), BRD (Business Requirements Document), FRD (Functional Requirements Document), SRS (Software Requirements Specification), and RTM (Requirements Traceability Matrix).
- Comprehensive knowledge in Change Management, Risk Identification, Risk Assessment, Risk Mitigation, Quantitative Risk Analysis, and Qualitative Risk Analysis, adeptly and collaboratively assisted PM in developing Project charter and Project Plan.
- Highly adept and experienced in creating and interpreting Unified Modeling Language (UML) diagrams, including Use Case Diagrams, Activity Diagrams, Data Flow Diagrams, Sequence Diagrams, Wireframes, and Mockups using MS Visio.
- Engaged with the Product Owner to prioritize user stories using techniques such as the MoSCoW method and the Kano Method, estimated user stories using methods like Story Points method, Walking Skeleton method, and T-Shirt Sizing method.

- Comprehensively wrote user stories and framed acceptance criteria, definition of ready (DOR), and definition of done (DOD) also used burn-down and burn-up charts to track and visualize the progress of work, for issue identification using Jira.
- Participated in Backlog Refinement sessions, Scrum ceremonies, such as Sprint Planning, Sprint Review, Daily Scrum, and Sprint Retrospective, to foster seamless alignment, effective communication, and dependency management within the project.
- Created and managed Scrum artifacts like Product Backlog, Sprint Backlog, and defined MVP (Minimum Viable Product).
- Proficient in Test-Driven Development (TDD), Behavior-Driven Development (BDD), and Acceptance Test-Driven Development (ATDD), leveraging these methodologies to enhance project quality and align with best practices for software development.
- Demonstrated hands-on experience in proficiently writing and executing SQL queries, including Joins, Subqueries, and Aggregate functions, supported by a good understanding of Procedures, Functions, and Triggers, and enriched by in-depth knowledge of the processes involved in effectively creating data warehouses, data marts, and data lakes for data validation and analysis.
- Created Source to Target Data Mapping documents with specifications for source tables, data types, transformations, and business rules application and possess demonstrating expertise in Data Mapping, and Migration to transform and load.
- Knowledge of the implementation of dimensional data modeling including the star and snowflake schema, dimension, and fact tables, and the various OLAP operations like slice, dice, roll-up, and drill down and OLTP for transaction management.
- Managed ETL (Extract, Transform, and Load) using Informatica, and data cleansing, transformation testing, and data profiling.
- Strong understanding on big data concepts and tools such as Hadoop consisting of two components HDFS (Hadoop Distributed File Systems), MapReduce and libraries such as Apache Hive, Impala, Flume, Sqoop for analysis and Apache Mahout for Machine Learning algorithms and knowledge of using Hue browser for interacting with Big Data tools and technologies.
- Experience in DevOps, fostering collaboration between development and operations teams, resulting in successful Continuous Integration and Continuous Deployment (CI/CD) implementation in payment-related IT projects, delivering high quality.
- Proficient in containerization and orchestration technologies, including Docker and Kubernetes, and skilled in utilizing Amazon Elastic Container Service (ECS) to efficiently deploy and manage containerized applications on AWS cloud infrastructure.
- Experience in supporting the operations team with Linux system administration, involving server management, scripting, and troubleshooting across development, and testing environments, demonstrating a valuable contribution to business analysis.
- Guided a cross-functional team in orchestrating quarterly data migration for container registry application upgrades and pioneered a robust documentation system, fostering seamless communication among team members and enhancing operational efficiency with each release, effectively demonstrating valuable leadership skills, and maintaining proactive approach to problem solving.
- Performed API endpoints, headers URL's validation using POSTMAN and created comprehensive documentation with Swagger, capturing Headers, Query Parameters, Resources, POST/PUT/GET/DELETE response body, and different error codes received.
- Experienced in Black Box, Manual, System, Performance, Load, Stress, Regression, Automated, UAT, Smoke, and Sanity Testing of applications with in-dept knowledge of STLC (Software Testing Lifecycle) by creating comprehensive Test plans, Test

Scripts, Test cases, Test Scenarios and Test Analysis reports including happy path and unhappy path scenarios.

- Created and managed critical project documents using Confluence resulting in improved collaboration for optimal results.

- Proficient in developing analytical Business Intelligence (BI) dashboards using Tableau, and Power BI, facilitating data-driven decision-making and providing valuable insights, enabling well-informed and business strategies to showcase the KPI's.

Seasoned Business System Analyst with 8 years of proven expertise in delivering

Work Experience

Sr. Business System Analyst

Stripe - New York, NY

June 2021 to Present

Project Name: Implementation of QR Code Payment System at Point-of-Sale (POS) Terminals.

The project was to establish a secure and efficient payment processing system, enabling customers to initiate payments through QR code scanning. It harnessed a variety of AWS services, with a notable emphasis on Amazon Elastic Container

Service (ECS), recognized for its capability in efficient and secure containerized application management. The project aimed to deliver a seamless and highly secure payment experience.

Roles and Responsibilities:

- Engaged in analyzing compliances with regulations, including General Data Protection (GDPR), Anti-Money Laundering (AML), Americans with Disabilities Act (ADA), and Know Your Customer (KYC), ensuring comprehensive regulatory adherence.

- Collaborated with stakeholders including POS terminal vendors, Business Owners, Cross Functional teams, and Compliance Officers to meticulously define requirements for QR code payment initiation and for implementing SWIFT codes using Interviews, JAD Sessions, and Focus Groups to ensure international payment standards and compliance requirements are met.

- Comprehensively identified and evaluated various third-party payment processor options, selecting the optimal solution to streamline card schema verification protocols and facilitate secure QR code payment transactions for merchants and customers.

- Conducted GAP analysis between traditional and QR code payments, highlighting (AS-IS) inefficiencies in traditional methods and advocating the adoption of faster, secure QR code solutions (TO-BE), significantly influencing process improvements.

- Created Business Requirement Document (BRD) to outline the high-level business requirements including stakeholder identification, project scope, clear objectives, current state analysis, future state analysis and identified deliverables.

- Designed UML diagrams such as process flow diagrams, use case diagrams, and sequence diagrams using MS Visio.

- Facilitated a backlog grooming session, closely collaborated with the cross functional team to prioritize epics using the MoSCoW approach, vertically sliced epics into user stories, estimated user stories using story points method, defined acceptance criteria, definition of done, and definition of ready, also effectively utilized burn-down and burn-up charts to track progress using Jira.

- Designed diverse architectural wireframes, and mock-ups to define Minimum Viable Product (MVP) using Adobe XD.
- Prepared and maintained the Requirements Traceability Matrix (RTM) to ensure that project requirements are well defined, precise, and unambiguous and to verify that all requirements are addressed and that no critical requirements are overlooked or omitted, and participated in scrum ceremonies such as Sprint Planning, Sprint Review, Daily Scrum, and Sprint Retrospective.
- Collaboratively Contributed to the establishment of a 3-tier architecture for the system in collaboration with the Solution Architect and various project teams, including the BI team, development team, and operations team, to ensure project alignment.
- Proficiently defined and documented system requirements, collaborated with cross-functional teams to ensure the successful implementation of a streamlined payment request processing system, and utilized a CI/CD Jenkins pipeline for continuous software development, testing, and deployment to significantly enhance efficiency, reliability, and quality assurance processes.
- Worked with the DevOps team to ensure the smooth deployment of payment processing on Amazon Elastic Container Service (ECS) with AWS Fargate, with a focus on efficient payment processing, resulting in the successful and payment requests.
- Coordinated with compliance experts to configure AWS (Amazon Web Services) Config for continuous compliance monitoring, addressing the need for compliance monitoring, and successfully setting up continuous compliance checks using AWS Config.
- Engaged closely with technical teams to ensure the secure routing of payment requests to external payment processors via NAT Gateway, with a focus on ensuring secure payment processing, and facilitating routing of payment requests effectively.
- Developed advanced SQL queries using joins, unions, outer joins, group by, order by, and aggregate functions to extract data to manipulate and calculate information to fulfill data and reporting requirements with precision, efficiency, and accuracy.
- Performed API testing using POSTMAN to validate the request and response for JSON-based RESTful services using CRUD-based methods like GET/POST to capture the response error codes and data received in the body efficiently and comprehensively.
- Collaboratively supported the QA team in developing test plan, test cases and was involved in Functional and Regression Testing.
- Performed User Acceptance Testing (UAT) using the Selenium tool, actively participated in preparing the defect management documents and tracking of defects in Jira contributing to a streamlined and effective quality assurance process.
- Designed and maintained project workflows and roadmaps effectively, thereby enhancing project organization and alignment with business goals, which included creating and managing critical project documents using Confluence for optimal results.
- Created diverse dashboards and ad hoc reports using Power BI, driving business insights, and (KPIs) including adoption rate, customer satisfaction, security metrics, and transaction efficiency to support data-driven decision-making effectively.

Environment: Agile-Scrum, Amazon Aurora, Amazon S3, Amazon Elastic Container Service (ECS), Amazon OpenSearch Service, Amazon elastic Cache, Power BI, MS Visio, MS SQL server 2019, MS Project, Office 365, Jira 8.14.0, Confluence 7.14.0, Postman v8.0.0, Swagger v3.25.6.

Sr. Business System Analyst

State of Wisconsin - Madison, WI

January 2019 to December 2020

Project Name: Enterprise Data Warehouse System for Financial Services.

The project aimed to create an Enterprise Data Warehouse system for Budget

Allocation, expenditure tracking, and enhanced financial reporting by integrating various data sources with the State Data Center, addressing the core challenge of legacy non-integrated databases to deliver improved access, analysis, transparency, and enhanced reporting capabilities.

Roles and Responsibilities:

- Gathered business requirements by participating in JAD sessions, interviewing business users and stakeholders, conducting one-to-one sessions, and consulting existing systems documents, fostering a holistic understanding of effective project delivery.
- Implemented the Waterfall methodology, overseeing the structured, sequential approach to project management and managed the completion of tasks and phases one after the other, with each phase's finalization serving as a prerequisite for the subsequent one, facilitating thorough requirement analysis, ensuring a methodical project workflow, and enhancing project's efficiency.
- Collaborate with stakeholders, created Business Requirement Documents (BRD), formulated Systems Requirement Specifications (SRS) and analyzed, adjusted, and verified these essential documents, ensuring alignment with project objectives.
- Gained a comprehensive understanding of the existing system (AS-IS), conceptualized the future state (TO-BE) system, and meticulously crafted System Process Maps, facilitating a seamless transition towards enhanced system functionality and efficiency.
- Assisted in creating work breakdown structure (WBS) and formulating critical path analysis (CPA) to optimize project planning.
- Proficiently utilized MS Visio to create various UML diagrams, including Use Case diagrams, Activity and Sequence diagrams, and Business Process Modeling Notation (BPMN) diagrams, contributing to comprehensive and visual project documentation.
- Developed comprehensive and precise Conceptual and Logical ER diagrams for the database, created a detailed Data Dictionary for the data models, ensuring a common understanding of the database schema and data attributes among project stakeholders.
- Assisted in increasing Data Integrity by performing Data Normalization and adding Data Verification and Validity to maintain the accuracy and effectiveness of data, leading to reduced redundancy, improved data consistency and enhanced data quality.
- Assisted Data Analyst in performing Data Mining to find correlations in existing data and constructed SQL queries, and the process involved extracting valuable insights from large datasets, uncovering trends, and making data-driven recommendations.
- Collaborated with Dimensional Model Architects in the development of SNOW-flake schemas, while also contributing by providing essential business rules, which led to enhanced data storage and retrieval capabilities within the data warehouse.
- Facilitated the seamless integration of multiple OLTP systems into unified OLAP environment using SSIS/SSAS as the ETL tool, to deliver robust reporting solutions, enhancing data processing and analytical capabilities across the organization.
- Created thorough API documentation using Swagger, covering authentication, usage guides, endpoints, and examples of requests and responses, conducted comprehensive tests on CRUD operations (GET, PUT, POST, DELETE), and verified response time, and error codes, and provided informative error messages for users, facilitating user-friendly interactions with the system.
- Collaborated with the QA team to strategize and construct a comprehensive Test Plan and Test Cases for conducting User Acceptance Testing (UAT), Functional Testing, and Regression Testing, contributing to the delivery of a high-quality product.
- Proactively tracked the Project and Team's Progress using ADO KPIs like Burnup

Charts, Burndown Charts to track remaining work, Cumulative Flow Charts to monitor workflow efficiency and shared the Weekly Progress Reports with the key stakeholders.

Environment: Waterfall-hybrid, MS project, MS office Tools (Word, Excel, PowerPoint, and Visio), MS Project, MS SQL server 2016, SSIS, SSRS, SSAS, Postman

Sr. Business System Analyst

Swagger 2.9.10. Discover Financial Services, - Columbus, OH

February 2018 to October 2019

Project Name: Custom Credit Scoring Model Development for Enhanced Lending Decision and Risk Prediction.

The project's goal was to create a credit scoring model for generating a custom score by the bank using a machine learning algorithm for each consumer, utilizing credit reports from three different credit bureaus, Know Your Customer (KYC) data, and unstructured data within a Hadoop distributed framework (HDFS), Apache

MapReduce and integrate with Azure HDInsight. The project aimed to make lending decisions, predict long-term customer risk, facilitate a better understanding of consumer history, and remove discrepancies in credit scores.

Roles and Responsibilities:

- Engaged in understanding regulatory acts such as Equal Credit Opportunity Act (ECOA), Fair Credit Reporting Act (FCRA), Risk Base Pricing Notices (RBPN), Fair Housing Act (FHA), Payment Card Industry Data Security Standard (PCI DSS).
- Collaborated with the customers, merchants, and Subject Matter Experts in gathering requirements in Credit score and bureau reporting along with employees to get a thorough understanding of business processes and analyzed the data structure, hierarchy and re-mapping and verified compliance documents for customer KYC and customer due diligence and baselined them effectively.
- Engaged in creating project plans, product vision, product roadmap, developing the project workflows, and creating project charter along with Project Manager in managing the schedules and tracking project timelines ensuring successful project completion.
- Transformed the credit assessment process, from an AS-IS state to a TO-BE state by designing a custom credit scoring model, incorporating machine learning, expanding data sources, and optimizing lending decisions, ensuring the precision and comprehensiveness of consumer credit histories, ultimately enhancing the reliability of the credit assessment process.
- Created Use Case diagrams, Use Case Templates, Process flow diagrams, and Data Flow diagrams using MS Visio.
- Created Wireframes and graphical user interface (GUI) Mockups using Adobe XD, assisted in developing Evolutionary and Throwaway prototypes to explain the end-to-end system using Invision Studio, enhancing design and functionality.
- Extensively used Jira for converting requirements to User stories, in writing acceptance criteria, framing Definition of Ready (DOR) and Definition of Done (DOD) for the Potentially shippable product increment (PSPI) that was presented to the users.
- Collaborated with the Data analyst in identifying relevant and reliable data sources, exclusion of fraud accounts not suitable for development, as well as in identifying compliance with data governance rules, ensuring comprehensive data quality management.
- Worked closely with Solution Architect to collaboratively define the architecture and data flow for integrating Hadoop with Azure HDInsight, including the selection of appropriate Azure services such as Azure Data Lake Storage and Hadoop components.

- Performed CRUD operations in SQL and stored procedures using select and join for drill downs to pull data while being actively involved in reading data from varied file types, created standard and ad-hoc reports using SQL, enhancing reporting capabilities.
- Used Apache Sqoop, Flume for data extraction from Oracle and NoSQL databases and Apache Mahout for analytics.
- Assisted Data engineers in Data querying from Hadoop clusters for MapReduce jobs using querying in Hive QL.
- Responsible for documenting RESTful API calls from external and internal data sources using Swagger for data ingestion into Hadoop clusters through Apache Sqoop and tested the functionality of API endpoints proficiently using POSTMAN.
- Assisted in the creation of Test Cases, Test Plans, Test Scenarios, and updated Requirements Traceability Matrix (RTM).
- Assisted testing team in UI testing and documented the defects in the ALM, conducted API testing using POSTMAN, and used ALM to Manage Defects/Bugs and Test Cases, ensuring streamlined and effective quality assurance process.
- Conducted User Acceptance Testing (UAT), participated and facilitated end-to-end testing of the system using Runtime Manager with the help of QA, ultimately delivering a high-quality product that met the expectations of stakeholders and end-users.
- Efficiently utilized Cloudera Hadoop to connect data to Tableau with the Hive server, created Ad-hoc and analytical reports minimizing the time required for data visualization and reporting dashboards and significantly reduced the time required for data visualization and the development of reporting dashboards, enhancing the overall data-driven decision-making process.

Environment: Agile-Scrum, MS Visio, MS SQL server, MS Project, Office 365, Azure HDInsight, Jira 7.12.0, Confluence 7.11.2, Tableau 10.5.1, Postman v5.6.1, Swagger 2.5.1, Cloudera manager, Apache Hadoop, Apache Sqoop, HP ALM, Hive QL, SQL.

Axis Bank, Mumbai, India

Business System Analyst

ACH

November 2016 to January 2018

Project Name: Same Day ACH Transaction Processing.

The scope of the project was to enhance ACH to new powerful Same Day ACH transaction processing. The proposed solution will enable the option for same-day

ACH payments, for credit entries, through new ACH Network functionality, without affecting existing ACH schedules. In lieu of NACHA's proposal, batch files would be processed on the same-day through two new clearing windows.

Roles and Responsibilities:

- Elicited requirements using JAD sessions, Survey/Questionnaire, Interview sessions, and Focus Groups and analyzed the feasibility of the requirements and formulated and conducted GAP Analysis to derive requirements for ACH processing proficiently.
- Conducted Cost-Benefit Analysis, Feasibility Analysis, and Impact Analysis, and evaluated Porter's Five Forces.
- Successfully gathered SMART (Specific, Measurable, Attainable, Realistic and Timely) requirements and transforming them into Use-Case Specifications and workflow diagrams, Business Requirements documents (BRD), Functional Requirements Document (FRD), Functional Specifications Document (FSD) and System Requirements Specifications (SRS) thoroughly and accurately.
- Assisted project manager and product owner to track and improve efficiency and

Team Velocity using Sprint Burn-Down Chart and Product Burn-Down Chart, resulted in providing real-time insights into sprint progress and areas for improvement.

- Created Mock-Up Screens and Wireframes using User Interface components for client verification using MS Visio.

- Facilitated and time-boxed the Scrum ceremonies Sprint Planning Meeting, Daily Standups, Sprint Review Meeting, Sprint Retrospective Meeting, and Grooming Sessions promoting team collaboration, goal alignment, and continuous improvement.

- Helped the Product Owner to prioritize the Product Backlog items for developing Sprint tasks by taking suggestions from the cross-functional development team, ensuring the sprint work alignment with both project objectives and team capabilities.

- Diligently and extensively used Jira for comprehensive issue tracking, user story management, and requirement traceability and analyzed the Iteration Burn

Down and Burn Up charts to review defects, monitor progress and identify essential bottlenecks.

- Generated ad hoc SQL queries using joins, database connections, and transformation rules to fetch data from SQL Server database.

- Assisted with User Acceptance Testing, developing and maintaining quality procedures, and ensuring that appropriate documentation was in place and assisted in Black box, UAT, and Regression testing using Jira for streamlined test management.

Environment: Agile-Scrum, MS Visio, MS Project, MS office, Asp.net, C# .net 4.5,

MS SQL server 2014, Visual studio 2015, Jira 6.4.11, Tableau, MS Office Suite (MS word, MS Excel, PowerPoint), IAS 2012.

Business Analyst

Niyo Solutions Inc - Bengaluru, Karnataka

March 2016 to November 2016

Project Name: Automation of New Account Opening.

The scope of the project involved automating the entire New Account Opening process to provide seamless business user experience and to improve process

Service Level Agreements (SLAs) with a new CRM System including Data Migration from the Legacy Systems. The system standardized and automated the entire process in the CRM function and helped reduce data duplication and increased the Data

Integrity.

Roles & Responsibilities:

- Understood state-of-the-art processes by interacting with stakeholders and

Document Analysis and performed GAP Analysis to identify of improvement and opportunities for and assisted the Product Owner and Project Manager in Project Planning.

- Facilitated JAD Sessions and conducted interviews with various Subject Matter Experts (SMEs) and stakeholders, serving as valuable means for gathering requirements and conducted process reviews and policy and procedure reviews to elicit requirements.

- Created Requirement Traceability matrix (RTM) and effectively managed migration process and overseeing developer fixes, re-tested fixes, defects/bugs tracking, issue log and tracked progress for team members of project through completion.

- Created Wireframes, Mockups, Use Case Diagrams, Sequence diagrams, Class diagrams, Activity Diagrams, and Entity Relationship Diagram (E-R) using MS Visio and developed a better understanding of Business Processes involved.

- Proficient in Jira for task management, user story creation, and sprint planning, for efficient collaboration with cross-functional teams, enhancing process, streamlining workflows, and contributing to the successful delivery of high-quality outcomes.
 - Managed project workflows and roadmaps within Confluence, resulting in improved project organization with business objectives.
 - Worked with the QA team to design and develop Test Plans and Test Cases to perform User Acceptance Testing (UAT), Load Testing, Stress Testing, System Testing, and Regression Testing ensuring rigorous and methodical testing procedures.
 - Facilitated the QA Test Process by assigning test cases to the QA Test Plan in various builds and assigned test cases to the testers.
 - Regularly submitted defect reports and conducted meetings to communicate with the development team about the defects.
- Environment: Agile-Scrum, IBM FileNet (ECM), MS Visio, HP QC, MS Project, MS Visio, MYSQL Server, SharePoint, MS Office Suite, Java/J2EE, Spring Framework, REST APIs.

IT Infrastructure and Operations Engineer

Flipkart - Bengaluru, Karnataka

June 2015 to February 2016

Project Name: IT Infrastructure and Operations Enhancement

The project aimed to improve a container registry application and its infrastructure. It involved data migration, real-time performance monitoring, and issue diagnosis using Prometheus and Grafana. The team implemented a proxy cache for faster image retrieval, transitioned to a cloud-native container registry for security, and deployed PostgreSQL for scalable client data storage. Monthly security fixes and server performance monitoring were also key aspects of the project.

Roles and Responsibilities:

- Led team for quarterly data migration of container registry application upgrades and published a detailed documentation system that allowed for seamless communication among team members, leading to increase in efficiency during each release.
- Configured Prometheus to extract store and analyze real-time performance metrics of container registry, enabling swift diagnosis of issues during outages and ultimately leading to more efficient DevOps processes and enhanced system reliability.
- Demonstrated expertise in Agile methodologies, particularly Scrum and Kanban, for managing operational tasks and projects.
- Developed Grafana monitoring dashboard to generate real-time failure notification of container registry operations that helped to provide comprehensive overview of system's performance, allowing for early detection of issues before end-user's impact.
- Strategized deployment of essential security fixes to servers on monthly basis to reduce bugs and security fixes to enhance stability and security of IT infrastructure, resulting in reduction of bug and optimizing the overall operational efficiency.
- Adept in Jira for prioritizing tasks, managing tasks, creating user stories, tracking project progress, and planning sprints, fostering effective teamwork and clear communication across departments and on-time project deliveries with high quality outcomes.
- Implemented proxy cache feature to pull target container images from internet onto intranet, reducing the pull time by 80%.
- Deployed PostgreSQL on production servers to aid in storage of relational data for each client utilizing container registry utilizing PostgreSQL's robust capabilities, allowing container registry to scale its storage capacity and help in dynamic data expansion.

- Configured node exporter on database servers to measure memory, disk, and CPU utilization accurately, enabling to monitor server activity in real-time, facilitating timely responses to issues and ensuring the smooth operation of critical systems.

- Performed regression testing after UAT changes to ensure system stability, functionality, performance, security, and scalability.

Environment: Agile-Scrum, Linux, Docker, Kubernetes, Prometheus, Grafana, PostgreSQL, MS Office, MS Visio, MySQL Workbench, HP QC..

- Comprehensive knowledge of various regulatory acts, including Financial Intelligence Centre (FIC) Act, Bank Secrecy Act (BSA)

- Created several

Statement of Work (SOW)

- BRD (Business Requirements Document), FRD (Functional Requirements Document), SRS (Software Requirements Specification), and RTM (Requirements Traceability Matrix).

- Comprehensive knowledge in Change Management, Risk Identification, Risk Assessment, Risk Mitigation, Quantitative Risk Analysis, and Qualitative Risk Analysis, adeptly and collaboratively assisted PM in developing Project charter and Project

Machine Learning algorithms and knowledge of using data-driven insights and optimizing processes for diverse stakeholders in the banking domain. Proficiency in requirements analysis, cross-functional collaboration, and translating intricate business needs into innovative, impactful solutions, including risk assessment, fraud detection, and compliance. A dedicated professional committed to driving growth and enhancing organizational performance through strategic analysis and problem-solving focusing on banking and financial services, encompassing credit underwriting, loan origination, and customer relationship management.

Comprehensive knowledge of various regulatory acts, including Financial

Intelligence Centre (FIC) Act, Bank Secrecy Act

(BSA), Sarbanes Oxley Act, General Data Protection Act (GDPR), Basel I, II, III,

FinCEN, Risk Base Pricing Notices

(RBPN) Act, and a range of compliances such as Anti Money Laundering (AML), Know your Customer (KYC), Customer

Due Diligence (CDD), Financial Action Task Force (FATF) Act, Foreign Account Tax

Compliance (FATCA) Act.

Contributed to all phases of the Software Development Life Cycle (SDLC) in multiple projects by working collaboratively with the Business Users, Key Business Stakeholders, Subject Matter Experts (SMEs), Project Managers (PMs), Scrum Master,

Architects, Testers, Developers, analysts, and successfully delivered end-to-end business solutions by facilitating important meetings and worked in traditional Waterfall and Agile Methodologies such as Agile-Scrum, Scrumban, Kanban, and SAFe.

Extensive experience in requirement gathering including Brainstorming, JAD

Sessions, Document Analysis, Interviews, Focus

Groups, Workplace Observation, Interface analysis, Requirements Workshops, and comprehensive marketing Analysis.

Aided project managers in conducting comprehensive Cost-Benefit Analyses,

Feasibility Studies, Impact analyses, root cause analyses, SWOT analyses, risk analyses, and ROI Analyses to thoroughly evaluate and authenticate the needs of the project.

Diligently performed thorough in-depth GAP analysis and Business Process

Mapping, comprehensively understanding the AS-IS and TO-BE business processes, and expertly identifying source-to-target mapping

(STM) and transformation logic.

Created several artifacts, including Statement of Work (SOW), BRD (Business

Requirements Document), FRD (Functional

Requirements Document), SRS (Software Requirements Specification), and RTM (Requirements Traceability Matrix).

Comprehensive knowledge in Change Management, Risk Identification, Risk Assessment, Risk Mitigation, Quantitative Risk

Analysis, and Qualitative Risk Analysis, adeptly and collaboratively assisted PM in developing Project charter and Project Plan.

Highly adept and experienced in creating and interpreting Unified Modeling Language (UML) diagrams, including Use Case

Diagrams, Activity Diagrams, Data Flow Diagrams, Sequence Diagrams, Wireframes, and Mockups using MS Visio.

Engaged with the Product Owner to prioritize user stories using techniques such as the MoSCoW method and the Kano Method, estimated user stories using methods like Story Points method, Walking Skeleton method, and T-Shirt Sizing method.

Comprehensively wrote user stories and framed acceptance criteria, definition of ready (DOR), and definition of done (DOD) also used burn-down and burn-up charts to track and visualize the progress of work, for issue identification using Jira.

Participated in Backlog Refinement sessions, Scrum ceremonies, such as Sprint Planning, Sprint Review, Daily Scrum, and

Sprint Retrospective, to foster seamless alignment, effective communication, and dependency management within the project.

Created and managed Scrum artifacts like Product Backlog, Sprint Backlog, and defined MVP (Minimum Viable Product).
