EXPERIENCE

Lead Enterprise Architect

Digital Suits

📅 September 2023 – December 2025 📍 Remote

A leading innovator in providing enterprise architecture solutions and consultancy services for cloud-based integrations and data management systems.

- Architected enterprise target-state architecture, ensuring cross-domain alignment with stakeholders using AWS and Azure solutions to enhance data and application integration.
- Directed the creation of architecture principles and decision governance frameworks, streamlining architecture documentation across 6 projects.
- Formulated baseline templates and reference implementations for high-level architectural patterns, achieving consistent integration practices across 10 technical squads.
- Established a robust CI/CD pipeline, reducing software release cycles from 2 weeks to 1 day using Jenkins and GitLab.
- Orchestrated non-functional requirements across systems, improving application resilience and maintainability while addressing security and scalability.
- Formulated and presented architecture trade-offs to executives, facilitating informed decision-making for technology investments.
- Implemented secure API frameworks, managing data ownership and versioning, and mitigating security risks across 15 critical services.
- Constructed data model evolution plans, managing data migrations for 40 business domains using SQL Server and Oracle databases.
- Mentored a team of 8 solution architects and engineers, uplifting the team's technical expertise and architecture discipline.
- Innovated observability standards using Prometheus and Grafana, increasing system reliability and preemptive incident response readiness.
- Partnered with cross-functional teams to introduce AI-assisted delivery practices, augmenting software development life cycle without compromising quality or security.
- Spearheaded stakeholder management efforts, effectively aligning architecture goals with business needs and cultivating collaborative relationships.

SUMMARY

Seasoned Lead Enterprise Architect with 9 years of experience in designing and implementing large-scale enterprise architecture solutions. Proficient in Data Architecture Design, Solution Architecture, and IT Security Architecture. Skilled at orchestrating Continuous Integration/Continuous Deployment (CI/CD) and driving scalability across systems using cloud platforms and DevOps. Experienced in aligning business requirements with technical deliverables and implementing risk mitigation strategies. Proven track record of mentoring teams and enhancing architecture maturity while ensuring stakeholder satisfaction.

SKILLS

Architecture & Design

Architecture & Design: Data model design, Solution architecture design, IT security architecture

Integration & APIs

Integration & APIs: Implementing APIs, API/integration patterns, System boundaries

Data Management

Data Management: Data modeling, Data model evolution, Governance

Security & Risk

Security & Risk: Security architecture guardrails, Threat modeling, Risk mitigation strategy

Development & Deployment

Development & Deployment: CI/CD, Scalable systems, Release management

Senior Enterprise Architect

ATeam Soft Solutions

📅 October 2016 – August 2023 📍 Remote

A dynamic technology company providing tailored software solutions, specializing in system scalability, data architecture, and software security enhancements.

- Engineered the transition to an AI-enabled architecture, integrating machine learning models with Python and TensorFlow to predict system loads and reduce downtime.
- Assembled scalable cloud infrastructure for distributed systems, leveraging Amazon EC2 and Kubernetes for real-time data analytics and processing.
- Redesigned the security architecture to include Zero Trust model, minimizing data breach incidents across cloud environments spanning 20 business units.
- Integrated Continuous Delivery (CD) pipelines using CircleCI, accelerating deployment efficiency and reducing rollback times from 1 hour to under 10 minutes.
- Programmed cross-platform APIs, interfacing different organizational applications using GraphQL and RESTful APIs to facilitate seamless data flow.
- Consolidated legacy systems into modular microservices, enhancing system scalability and maintainability across 12 business-critical processes.
- Provisioned comprehensive risk management frameworks, leading risk identification and mitigation initiatives with quantifiable impact reductions.
- Standardized release management strategies, adopting Agile methodology resulting in predictable, auditable software deployment cycles.
- Hardened IT security postures, executing vulnerability assessments and deploying countermeasures using OWASP and Fortify tools.
- Constructed data governance frameworks, ensuring data privacy and compliance adherence for HIPAA-regulated environments.

Enterprise Architect

Jade Global

📅 February 2016 – September 2016 📍 Remote

A consultancy firm focusing on enterprise IT solutions delivering value in data integration and software deployment optimization.

- Created enterprise-wide data models for cross-departmental analytics using Snowflake and Looker, enhancing data-driven decision-making capabilities.
- Configured integration patterns and data flows for seamless interoperability across 18 different applications within the enterprise ecosystem.
- Established foundational API design and security practices, safeguarding against unauthorized access and ensuring seamless data exchanges.

EDUCATION

Master of Science in Computer Science

University of Texas at Austin

📅 June 2020 📍 Austin, TX

- Advanced Data Structures
- Distributed Systems
- Cloud Computing

Bachelor of Science in Computer Science

University of Texas at Austin

📅 January 2016 📍 Austin, TX

- Software Engineering
- Database Management Systems
- Operating Systems

- Deployed logging and monitoring solutions using ELK Stack, enabling advanced audit trails and real-time performance tracking.
