

Mir Luqman Talpur

Minneapolis, MN 55401

mirtalpur72jo_jvp@indeedemail.com

+12017088584

Senior Business System Analyst with around 9 years of experience functioning in Retail, E-Commerce, and Supply Chain domains with a focus on merchandising, assortment strategy, inventory management, digital payments, omnichannel strategy, customer segmentation, customer relationship management, business process improvement and enhancement. Self-organized and problem solver, accustomed to working in fast-paced environments and collaborating with cross-functional teams. Committed to data-driven solutions for efficiency, growth, and customer relationships.

PROFESSIONAL SUMMARY

- Wide range of expertise in working with B2B, B2C, O2O E-commerce, Supply Chain, and Retail platforms.
- Enabled transformative changes and generated valuable solutions using various business improvement and enhancement ideas, and using the principles of Design Thinking, Empiricism, Lean Thinking and Cross-functionality.
- Extensive experience on all phases of the System Development Life Cycle (SDLC) starting from the inception phase till the deployment phase of the project and hands-on experience working with both traditional and agile methodologies like Waterfall, Scrum, Waterfall-Scrum hybrid, Large-Scale Scrum (LESS) and the Scaled-Agile Framework (SAFe).
- Gained expertise in Project Management, Release Management, Requirement and Change Management, Risk Management, Plan Management, and Defect Management using JIRA, MS Project, and other industry-leading tools.
- Experience in effectively collecting and analyzing requirements specifically for Order Management System (OMS)
- Skilled in performing Stakeholder Analysis, Market Analysis, GAP Analysis, Cost Benefit Analysis, Feasibility study, Competitor Analysis, Impact analysis, Risk Analysis, As-Is and To-Be Analysis depending on the needs of the project.
- Experienced in effectively gathering requirements from end-clients and stakeholders by utilizing a wide range of elicitation techniques such as Joint Application Development (JAD), Brainstorming sessions, Interviews, Questionnaires, Surveys, Prototyping, Document Analysis, Focus Groups, Reversed Engineering, Observation, and Interface Analysis.
- Assisted in collaboratively drafting artifacts like Project Vision and Scope, Project Management Plan, Project Charter, Business Requirement Document (BRD), Functional Specification Document (FSD), and System Requirement Specification (SRS) by actively engaging with business owners, subject matter experts (SMEs), and key stakeholders.
- Assisted in determining and creating various project artifacts, including the Project Charter, Risk Document, Earned Value Management (EVM) analysis, Work Breakdown Structure (WBS), Critical Path Analysis, Business Requirement Document (BRD), Functional Specification Document (FSD), and System Requirement Specification (SRS). This involved active communication and collaboration with business owners, subject matter experts (SMEs).
- Assisted Product Owner in defining minimum viable product (MVP) features of the application under development.
- Experienced in crafting user stories and establishing clear acceptance criteria. Actively participated in key Scrum Ceremonies, including Backlog Grooming, Sprint Planning, Daily Stand-Up, Sprint Review,

and Retrospective. Proficient in employing prioritization techniques like Moscow, KANO, 100 Point method and Business Value Based.

- Worked with Product Owner to review PSPI (Potentially Shippable Product Increment) during review meetings and supported in the decision-making process regarding which features are considered "done" and satisfies acceptance criteria.
- Experienced in analyzing workflow processes and proficient in developing, reviewing, and refining business solution models using Use Case Diagrams, Sequence Diagrams, and Activity Diagrams with Lucid Charts and MS Visio.
- Assisted in creating low-fidelity and high-fidelity mockups and wireframes with UI designers using Balsamiq.
- Creating Entity-Relationship (E-R) diagrams using conceptual data model and logical data model with Lucid Charts.
- Assisted in the development of data marts (DM), data mapping, data migration, data integration and data warehouse (DW) implementing Extract, Transformation and Load (ETL) processes using Informatica PowerCenter.
- Extensive knowledge of Databases, Schemas, and online processing systems, including OLTP (Online Transaction Processing) and OLAP (Online Analytical Processing) operations such as Roll-up, Drill-down, slicing, dicing, and pivot.
- Demonstrating a comprehensive understanding of the Microservices Architecture (MSA) and JSON, XML, HTML format for communicating between the front end and back-end server for designing REST, and SOAP APIs.
- Possessing knowledge of the HTTP request for web services, including specifying REST API CRUD operations having HTTP verbs- GET, POST, DELETE and PUT at the application layer that utilized POSTMAN as a powerful HTTP client to test web services and ensuring their functionality. Also documented using Swagger hub, and Swagger UI tool.
- Skilled in implementing SQL QUERIES and proficient in using Joins, Unions, Select commands and Aggregate functions in extracting data from different data sources and programmed SQL Queries, Functions, business logic.
- Reviewed the test plan, test cases, test scenarios and maintained the test data with Confluence and HP ALM QC.
- Experienced in Black Box, Manual, System, Performance, Regression, Automated, Functional, Non-Functional, UAT, Smoke and Sanity Testing of applications with knowledge on Software Testing Lifecycle by creating Test plan, Test Scripts, Test cases, Test Scenarios, Test reports and Requirements Traceability Matrices (RTM).
- Worked extensively with common reporting tools such as Tableau and Power BI to design and generate a wide range of reports, including Standard Static Reports, Ad-hoc Reports, Dashboards, and Interactive MOLAP reports.

Work Experience

Senior Business Systems Analyst

Target - Minneapolis, MN
August 2022 to Present

Description:

The scope of the project was to maximize customer retention, enhance engagement, and drive sales growth. This was accomplished through the implementation of a robust loyalty program and

the development of an efficient, user-friendly interface. The Target Circle loyalty program played a crucial role in providing a seamless user experience and strengthening customer relationships. The project successfully improved customer satisfaction, fostered loyalty, and contributed to overall business performance.

Responsibilities:

- Worked as a Sr. Business System Analyst in the Retail domain, played crucial role in aligning technology solutions with business objectives to maximize customer retention, enhance engagement, and drive sales by creating customer loyalty program.
- Conducted a comprehensive AS-IS and TO-BE analysis to identify the existing gaps between the Store Management System and its layout and devised effective strategies for seamlessly integrating constant updates into the application.
- Identified key stakeholders and gathered functional and non-functional requirements associated with Store Management, Marketing, Inventory Management, Potential Stores, etc. through interviews, document analysis, and JAD sessions.
- Documented the User Stories and Acceptance Criteria for the PSPI (Potentially Shippable Product Increment)
- Worked closely with the Design/UI team in converting the functional requirements into technical specifications. This involved creating Prototypes, Graphical User Interface (GUI) and User Interface (UI) mock-ups using the Balsamiq tool.
- Worked collaboratively with the Mobile application team to meticulously design and develop a Wireframe and Mockup of the website. This collaborative effort aimed to ensure a consistent and seamless appearance across the Mobile platform.
- Involved in scrum ceremonies like Backlog grooming, Sprint Planning, Daily Scrum, Sprint Review, Sprint Retrospective.
- Analyzed business needs for Master Data Management (MDM). This involved closely examining the organization's data requirements, understanding data dependencies, and identifying key data entities that required governance and management.
- Successfully designed and developed an online loyalty program utilizing a cloud-based architecture with Amazon EC2 for scalable compute capacity and Amazon RDS for efficient data storage and management. Implemented automated notifications using AWS Lambda and Amazon SNS to deliver personalized offers and updates to customers in real-time, resulting in significantly improved customer retention, enhanced engagement, and substantial sales growth.
- Worked in a data governance project, contributing to the successful implementation of Collibra tool for internal stakeholders.
- Successfully identified and documented various types of APIs, including REST, SOAP, Bulk, and Analytical APIs, encompassing CRUD (Create, Read, Update, Delete) operations.
- Performed retrieval queries in SQL and utilized stored procedures using SELECT & JOIN operations for drilldowns to pull data while being actively involved in reading data from varied file types, created standard and ad-hoc reports using SQL, generating delimited files and SQL script to load data into SQL tables. Mainly focused on retrieving data to understand the data.
- Actively took part in developing the test plan, test conditions, and test cases using essential tools like Jira, MS Excel, and MS Word, to be used in testing based on business requirements, technical specifications, and/or product knowledge.
- Leveraged Amazon Quick Sight to extract insights from data, design interactive visualizations, and deliver impactful reports to stakeholders, driving informed decision-making and enhancing business performance.

Environment: Scrum, Lucid Charts, MySQL, POSTMAN, Jira, SharePoint, Confluence, AWS Lambda, Amazon SNS, Amazon RDS, Amazon Quick sight

Senior Business Systems Analyst

Thermo Fisher Scientific - Waltham, MA

January 2021 to August 2022

Description:

The project aimed to improve returns processing and warranty dispositioning program, by implementing formalized and automated systems. The objective was to maximize warranty credit and compliance at branch and technician level. To achieve this, the project involved the implementation of new operational processes and the utilization of number of custom, web-based tools. The project focused on creating an efficient and robust User Interface, along with a backend system that facilitated a smooth, error free workflow.

Responsibilities:

- As a Sr. Business System Analyst in the Supply Chain domain, I played a pivotal role in developing an end-to-end solution for streamlining the returns processing and warranty dispositioning system, by developing and implementing a web-based application. Helped ideate and build the application using JavaScript, on the Angular framework with HTML and CSS.
- Conducted comprehensive Gap Analysis by examining current business processes, systems, and requirements, and identifying areas for improvement and optimization to drive operational efficiency and maximize business outcomes.
- Gathered requirements from the clients using requirement elicitation sessions like Requirement Workshop, Focus Group, Interviews, Surveys, Document Analysis, Interface Analysis with inventory manager, S.M.E.s' and other stakeholders.
- Developed ER diagrams and Walking Skelton using Figma to design conceptual models and Minimum Viable Product.
- Created various estimable user stories in Jira and helped in creating precise acceptance criteria per projects requirements.
- Proxied as a Product Owner during the Overall Product Backlog Refinement and Multi-Team PBR to help various teams decide the Product backlog items (PBI's) and increased business alignment co-ordination between them.
- Assisted Product Owner in vertical slicing of the user stories and prioritizing the Product backlog items (PBI's) using Moscow Technique. Assisted the Scrum Team in estimating Product backlog items (PBI's) by using T-Shirt Sizing.
- Utilized AWS services including Lambda, S3, API Gateway, DynamoDB, IAM, Elastic Beanstalk, and CloudWatch to successfully improve returns processing and warranty dispositioning program, implementing automated systems, maximizing warranty credit, ensuring compliance, and creating efficient User Interface and backend workflow.
- Facilitated code review sessions with Developers to understand the written code and various Machine Learning Algorithms. These sessions focused on ensuring that the dev teams adhere to project requirements and followed industry best practices.
- Utilized Postman to test and document the CRUD operations (GET, PUT, POST, DELETE) of REST APIs. Verified the response time, error codes, and ensured adherence to API specifications and performance benchmarks.
- Performed SQL transformation, aggregate functions, various operations like SELECT, WHERE and JOIN to manipulate, and analyze data. Also used stored procedures and views to efficiently retrieve data from diverse data sources.
- Facilitated several test cases for User Acceptance Testing (UAT) and documented the corresponding Test plan, Test scenarios, Test scripts, Test reports and Requirements Traceability Matrix (RTM) using the Cucumber tool.

- Proficient in using Gainsight to improve customer engagement and retention by tracking the key metrics and workflows.
 - Designed compelling and interactive dashboards using Tableau to present insights and Key Performance Indicators (KPI's) for key metric reports like Velocity Reports, Burnup Chart, Lead time reports, cycle time reports, WIP reports, Cumulative Flow Diagram, Control Charts, Burndown Chart, control chart and Impediments list.
 - Actively associated with maintaining agile board using JIRA and documenting various issues using Confluence.
- Environment: SCRUM, AWS Services - AWS DynamoDB, Amazon Personalize, Amazon Pinpoint, Amazon Lex, AWS S3, CloudFront, J D Edward, Figma, Salesforce, Postman, Cucumber, Jira, Confluence, Tableau

Business Systems Analyst

The Hershey Company - Hershey, PA
October 2019 to December 2020

Description:

The project was to create and maintain a centralized inventory control system for convenience stores that provided up-to-the-minute information regarding inventory in all stores within the region. This project involved the creation of a central data warehouse to collect operational data from client's three separate warehouse management systems (WMS) and their sales and operations (S&OP) data to better align the operations as per market needs. After implementation, the forecasting accuracy increased from 24% to 76%.

Responsibilities:

- Worked as a Business System Analyst in the Supply Chain domain to create and maintain a centralized inventory control system for convenience store that provided up-to-the-minute information regarding inventory in all stores within the region.
- Created a central data warehouse to consolidate operational data from the client's three separate warehouse management systems (WMS) and their sales and operations (S&OP) data to better align the operations as per market needs.
- Organized meetings with marketing and sales lead to discussing program specifications, and process models.
- Conducted a comprehensive Impact Analysis to understand the AS-IS and TO-BE process by checking the feasibility and status to maintain triple constraints of Scope, Time, and Cost of the current state and in the future state of the system.
- Conducted requirement gathering sessions with client by using elicitation techniques like One-on-One Interviews, Questionnaires, Focus Groups, Workshops, Document Analysis, and Joint Application Development (JAD).
- Collaborated with SAP experts and technical teams to configure and customize SAP modules for the centralized inventory control system, ensuring alignment with business requirements and seamless integration with existing systems.
- Created high fidelity and low fidelity Mock-up Screens and Wireframes for an overview of Graphical User Interface (GUI) and prepared UML Diagrams such as Sequence, Activity, and Use Case Diagrams using Balsamiq.
- Actively involved in scrum ceremonies like Backlog Grooming meeting, Sprint Planning meeting, Daily Stand-up meeting, Sprint Review meeting, and Sprint Retrospective meeting. Also utilized the Guidelines as defined in the Scrum guide and Artifacts of the Agile-Scrum to develop a detailed implementation of the agile process development.

- Conducted SPRINT Retrospective meetings, in an environment for stakeholders to openly share their feedback and opinions. This approach encouraged active participation from all stakeholders and fostered a culture of continuous improvement.
- Collaborated with the development team to support end-to-end automated testing in the context of enterprise and team-level Scaled Agile Framework (SAFe), Agile Release Trains (ART), CI/CD Pipeline, and individual Scrum projects.
- Tracked, analyzed, and published the progress of the SAFe Agile Release Train (ART) for enterprise projects in an eCommerce platform. Monitored and reported on specific metrics periodically to ensure transparency and accountability. Facilitated the identification, resolution, and removal of impediments to streamline the development process.
- Played a key role in PI planning sessions, collaborating with cross-functional teams to define feature requirements, prioritize backlog items, and facilitate alignment of project goals and deliverables for successful program increments.
- Developed an inventory management system using AWS Lambda, DynamoDB, API Gateway, S3, CloudWatch, SNS, and CloudFormation, enabling efficient and scalable inventory control for convenience stores.
- Demonstrated expertise and proficiency in utilizing Postman to thoroughly test and comprehensively document APIs, while leveraging Swagger to design and establish standardized specifications for RESTful APIs.
- Expert in SQL query language with advanced skills in utilizing joins and unions to combine data from multiple tables and sources, enabling comprehensive analysis and reporting capabilities for complex business requirements.
- Utilized Jira to efficiently manage, track, and prioritize project tasks. Effectively collaborated with cross-functional teams, ensuring timely delivery, seamless communication, and streamlined workflows for successful project outcomes.
- Leveraged Tableau extensively to analyze complex data sets, derive meaningful insights, create visually appealing dashboards, and deliver actionable information to stakeholders, enabling informed and data-driven decision-making.

Environment: SAFe, SQL Server Database, SAP, Confluence, Balsamiq, Swagger, Postman, Jira, Tableau

Senior Business Analyst

Away Luggage - New York, NY

December 2018 to September 2019

Description:

The primary objective of the project was to develop an in-house application that would significantly enhance the company's inventory management and pricing analytics. A database for the exclusive use of inventory and pricing information was modelled, and the corresponding data was migrated from the existing database. This robust application empowered the company to gain deeper insights into their inventory and pricing data, enabling them to make informed decisions and optimize their strategies.

Responsibilities:

- Worked in a Waterfall-Hybrid environment to develop an in-house application with three-tier architecture.
- Actively assisted the Product Owner in determining and creating various Project Deliverables, including the Project Charter, Risk Document, Earned Value Management (EVM), Work Breakdown Structure (WBS).
- Assisted in creation of documents such as Software Requirement Specification (SRS), Business Requirement Document (BRD), Functional Requirement Document (FRD) along with the project management plan.

- Worked collaboratively with the Mobile application team to create high/low fidelity Wireframe, Mockup, and navigational flow diagram, process flow diagram of the website to appear the same in Mobile platform using Lucid Chart.
- Actively participated in scrum ceremonies and served as a proxy Product Owner in daily stand-ups, reviews, and retrospectives to ensure smooth progress of the project.
- Aided developers with design of migration plan and execution for smooth flow of business processes.
- Mapped Oracle database with Informatica PowerCenter to ensure a Relational Database Management System (RDBMS) was designed to operate as per the business logic while incorporating information ported from flat and CSV files.
- Performed various functions in MS Excel and collaborated through SharePoint for efficient data retrieval and collaboration.
- Utilized Power BI to analyze complex data sets, design visually appealing dashboards, and deliver actionable insights to stakeholders, enabling data-driven decision-making and facilitating business growth.

Environment: Waterfall-Hybrid, Oracle Database, Informatica, MS Visio, HP ALM, SharePoint, Power BI

Business System Analyst

Telenor Pakistan - Karachi

March 2017 to August 2018

Pakistan

Description:

The project focused on enhancing existing systems to effectively assimilate both historic and new customer data, glean insights into customer spending patterns to offer tailored promotions to boost revenue and improve market share. This was done by incorporating a centralized data warehouse system via ETL Process. The team created interactive dashboards and visualizations initially on different tools to prepare reports to serve different categories of end user and increasing the ecommerce experience.

Responsibilities:

- Responsible for creating and reviewing business requirements, functional specifications documentation.
- Conducted workflow, process diagram and gap analyses to derive requirements for existing systems enhancements.
- Responsible for identifying and documenting business rules, created comprehensive and detailed Use Cases that served as a foundation for the project's development.
- Authored and delivered BRDs, FRDs, and SRS documents, translating complex business needs into concise documentation for cross-functional teams, ensuring alignment and successful project execution.
- Played a pivotal role in designing the data warehouse by creating conceptual and logical models. This involved mapping entities using Entity Relationship (ER) diagrams and documenting keys for easy reference during the development phase.
- Documented source & target systems and profiled extracted data to comply with target system architecture.
- Involved in scrum ceremonies (Sprint Planning, Daily Scrum, Sprint Review, Sprint Retrospective.)
- Aided developers with design of migration plans and migration execution to not affect business actions and processes.
- Mapped a new system using Informatica PowerCenter to ensure data from the data warehouse was designed to smoothly operate as per the business logic while incorporating information ported from the current database.
- Documented all ETL transformations and mappings performed while establishing a data warehouse.

- Used SQL scripts/queries extensively for data verification at the backend as per the requirements of the mapping document.
- Developed the test plan, test conditions and test cases to be used in testing based on business requirements.
- Additionally, participated in conducting User Acceptance Testing to ensure that the system met the desired requirements and delivered the expected functionality, ensuring a high-quality product.
- Used Tableau to create customized dashboards showing reports that satisfies business needs and requirements.

Environment: Waterfall- Hybrid, Informatica PowerCenter, MS Project, MS Office Suite, MS Power Point, Tableau, Oracle.

Business Analyst

Engro Group - Karachi

September 2015 to February 2017

Pakistan

Description:

The goal of the project was to properly manage order processing capacity to increase order fulfillment capabilities while maintaining cost-effectiveness. This was achieved by implementing Cloud Order Management, it was also intended to achieve an integrated approach to reverse logistics, inventory management, and omnichannel order fulfillment.

Responsibilities:

- Responsible for gathering requirements and analyzing supply chain performance in conjunction with customers system and needs to improve the supply chain process and acted for business improvement.
- To document the requirements effectively, created different artifacts such as Business Requirements Documents (BRDs), Functional Requirements Documents (FRDs), and System Requirements Specifications (SRSs).
- Created low and high-fidelity mock-ups and wireframes using Balsamiq tool.
- Performed impact analysis and GAP analysis for new functionality requirements, also assist prioritizing them.
- Managed issue logs through thorough documentation and maintained a parking lot list.
- Presented and participated actively during the Increment Demo meetings to make sure it meets DOD with the product owner also as business users to receive and sign off for the requirements and receive feedback.
- Facilitated and participated in the SCRUM ceremonies, such as Sprint Planning, daily scrum, Sprint Review, Backlog Refinement, Release Planning, Goal Setting, and Sprint Retrospective meetings and prioritized the severity of issues to resolve the bugs according to each of their time sensitivity.

Environment: Waterfall, MySQL, JIRA, SharePoint 2016, Oracle Cloud OMS, MS Project, MS Visio, Balsamiq

Quality Analyst/ Tester

Habib Bank Limited - Hyderabad, Telangana

July 2014 to June 2015

Pakistan

Description:

The project's scope was to develop and implement an online banking facility for the client's customers, enabling them to conveniently access and manage their accounts online. Also enabling various banking functionalities such as account balance inquiries, fund transfers, bill payments, and transaction history tracking.

Responsibilities:

- Reviewed System Requirement Specifications (SRS), Functional Requirement Specification (FRS) & design documents.
- Designed & documented Test Plans, Test Scenarios, Test Cases based on business requirements & design documents.
- Prepared Test Data for positive and negative test scenarios for functional testing using boundary value analysis and exhaustive testing as documented in the test plan. Logged defects in HP ALM to ensure comprehensive defect tracking and resolution.
- Validated the database using various SQL queries like Joins, group by & SQL Aggregate queries for data profiling.
- Prepared Requirements Traceability Matrix (RTM) to help the stakeholders trace the requirements.
- Played an integral role in the testing process by actively participating in all phases, including Smoke testing, Graphical User Interface (GUI), Functional testing, System testing and Regression testing and support User Acceptance Testing (UAT).
- Thoroughly documented Bug Reports and Categorized them based on severity and Priority.
- Utilized Quality Center as a centralized repository to store all test results and for defect tracking and reporting.
- Provided weekly management status reports and coordinated meetings between test team and development team to review defects and track them to closure. Additionally, created Macros which helped in enhancing the reports.

Environment: Waterfall, MYSQL Server 5.1, HP QC, MS Office (MS Excel, MS Word), Node.js.

Education

MS in Supply Chain Management

Adelphi University - Garden City, NY
