

Mukhtar A.

Houston, TX 77001

mukhtara7or84_o5j@indeedemail.com

+12018779383

- 10 years of experience as Business Analyst with proven ability to work with self-organizing, cross-functional teams in financial institutions, Insurance, and investment banking domains and SDLC Software Development Life Cycle methodologies such as Waterfall, Agile (Scrum, Scrumban, Kanban) including analysis, design, and development and testing of software.
- Skilled with elicitation procedures like Brainstorming, Group Discussions, Interviewing, and Questionnaires.
- Experienced in As-Is, To-Be Process Flows, SWOT analysis, Root Cause analysis, Risk analysis, Feasibility analysis, Document analysis, Cost-Benefit analysis, and SOPs by identifying existing technologies and documenting the enhancements.
- Preparing and reviewing various artifacts like BRD (Business Requirement Document), FRD (Functional Requirement Document), Functional Specification Document, Risk Register, RACI Matrix, use case specifications and work breakdown structure.
- High experience in tracing requirements throughout the development process and verifying to Requirement Traceability Matrix.
- Well acquainted with workflows and Unified Modeling Language (UML) diagrams including Use Cases, Activity Charts, Class Diagram, Business Process Flow Diagram, Sequence Diagrams, Data Flow Diagrams, and ER Diagrams using MS Visio
- Proficiently helped development teams to break down large user stories for execution. Instigated in various Walk-through sessions with developers and provided presentations to help them understand the end user needs and subsequently create Tasks.
- Adept in Application Program Interface (API) documentation & testing using tools like Postman.
- Adept in risk management activities including risk identification, risk assessment, risk analysis and control and monitoring.
- Experience supervising Functionality Testing, System Testing, User Acceptance Testing (UAT), and Performance Testing.
- Work experience includes effective implementation of Requirement Management, Change Control Management, Defect Prevention Management, Release management and Project Management tasks throughout the project life cycle (PLC).
- Experience in creating User Manual and conducting User Training Workshops to provide training to the end users.
- Worked on BI/reporting tools like Tableau and Power BI to create dashboards.
- Excellent Analytical, Problem solving, Communication and Documentation skills, Dedicated & Self-motivated, highly motivated and organized leader with proven leadership capabilities, Time management skills and excellent client relationship.
- Worked under tight deadlines and multi-tasking to meet business goals. Experience in scheduling meetings, negotiating and co-ordination with Developers, Testers, UI/UX developers, Support Team, Application Architects, and Subject Matter Experts.
- Understanding of compliances like Know Your Customer (KYC), Mobile Banking Policy, Change Management Policy, Confidentiality Agreement, Potentially Fraudulent Activity Letter.

- Solid knowledge on Scrum concepts like Scrum Team, Product Backlog, Release Planning, Sprint Planning, User Stories, Daily Standup Meeting, Sprint execution, Sprint Review, Sprint Retrospective, Team Velocity, Burn-Up/Down Charts etc.
- Worked with the Product Owner to define the Product Roadmap along with the Minimum Viable Product, MMF, MRF and reviewed the PSPI during the review meeting deciding which features satisfy the acceptance criteria to be defined as Done.
- Proficient in breaking down Epics and Features into User Stories by vertical slicing that correspond with the INVEST criteria while also providing a comprehensive Acceptance Criteria for the stories based on the business requirements.
- Assisted PO in prioritizing using Prioritization techniques such as MoSCoW, Kano, 100-point methods, and assisted the team in estimating stories using Estimation techniques like Planning Poker, T-shirt Sizing & Relative Mass Evaluation.

Work Experience

Business Analyst

United Airlines - Houston, TX
March 2021 to Present

Project Description: The project involved moving customer data and financial data to the cloud. I wanted to leverage the benefits of cloud computing and enhance operational efficiency, scalability, and cost-effectiveness while maintaining the highest level of data security and regulatory compliance.

Roles and Responsibilities:

- Conducting Business process analysis, Cost analysis, Risk analysis and Vendor analysis to determine whether Amazon Web Services (AWS) can be used as a cloud computing solution, along with cloud architectures such as Infrastructure as a Service.
- An assessment of AS-IS about the current business processes and TO-BE processes was conducted in order to understand the key findings, areas of improvement, opportunities for change with short-term and long-term considerations within business.
- By using Elicitation techniques like Brainstorming, JAD Sessions, Semi-structured and Structured Interviewing, we gathered and documented requirements in Epics, User Stories, and Business Use Cases in JIRA, and resolved open items.
- Created UML Diagrams, such as Use Cases, Activities, and Sequence Diagrams, was created using Lucid charts in order to provide clear understanding of the vision document. Also, to support the flow of business processes around entities, and to help stakeholders and the project team visualize the project workflow and identify the primary actors and system interaction.
- Supported the Product Owner (PO) in breaking down EPICS into User Stories using the (INVEST) Technique, determining the Acceptance Criteria, Definition of Ready (DOR) and Definition of Done (DOD). Further assisted the Scrum Development Team in breaking down the user stories into Sprint Tasks to be completed within a sprint by using the SMART Technique.
- Collaborated with the PO to prioritize and estimate the user stories using MoSCoW and T-shirt sizing techniques.
- Conducted a Business Process Modeling analysis, identified operational Risks, assessed them, and articulated them.
- Participated in Scrum Ceremonies like Backlog refinement, User story refinement, Sprint planning, Daily standup, Sprint review, product demo and Retrospective meetings and helped the Scrum Master in facilitation of SCRUM practices by ingesting Scrum pillars, values, and principles and to resolve impediments pertaining to the requirement being unclear.

- Facilitated the Data Analyst in creating Staging area, Source, Target databases for data migration and data integration, also created Data Mapping document, Configuration document, technical document, and Data Migration Plan document.
- Identified the need for data backup by conducting Risk Analysis and created the Risk Register and Risk Analysis Report.
- Coordinated with the manager, Product Owner and worked in developing Data mapping document, Data modeling
- and Data extraction & Integration in the data warehouse by using the AWS Data Sync tool from the legacy systems.
- Used API technical documentation tool like Swagger and assisted in API testing using Postman to document all the test logs.
- Wrote several SQL queries using functions such as joins, unions, union all, outer joins, inner joins, group by, order by, and aggregate functions to extract data for timely reporting, validation, and the creation of stored procedures.
- Created comprehensive PowerPoint presentations to communicate migration strategies, progress updates, and post-migration performance results to stakeholders.
- Collaborated with the Quality Assurance team to design and develop a Test Strategy, Test Plans, Test Scenarios, and Test Cases for performing Functional Testing and Regression Testing, both manually and using automation.
- Involved in developing of User Acceptance Testing scenarios, providing support to the business users during UAT testing.
- Utilized JIRA for the maintenance and tracking of issues, bugs, user stories, workflow management, and the creation of a Requirements Traceability Matrix (RTM) to allow requirements to be traced and tested transparently.
- Issues and priorities were captured into the tracking log of JIRA.
- Used Tableau for Reporting and visualization to perform analysis on the reports, charts and dashboards that were generated.
- Provided post-migration support, addressing data-related issues, and collaborating with stakeholders to monitor and refine the performance of the migrated data.

Business Analyst

JPMC - Plano, TX

September 2018 to February 2021

Project 1 Description: Development of a custom-made web application that acts as a bridge between the bank's legacy systems and modern technologies. The custom solution facilitated data exchange, process automation, and real time insights, optimizing operational efficiency while ensuring a smooth transition to a more agile and user-friendly banking environment.

Project 2 Description: The bank identified the need to enhance its digital banking services to meet the evolving expectations of its tech-savvy customers. Recognizing the growing popularity of mobile banking and payments, the bank embarked on an ongoing project to enhance its mobile app and develop new features that would provide a seamless and secure banking experience for its customers.

Roles and Responsibilities:

- Collaborated with stakeholders to gather and document requirements for the web and mobile app, resulting in improved user experiences and increased customer satisfaction.
- Identified and analyzed needs for various functionalities by using various techniques such as Document Analysis, Brain Storming, White Boarding and Interviews with Subject Matter Experts (SMEs) and project stakeholders.

- Performed GAP Analysis to understand the Current AS-IS business process and documented it and worked on the Future TO-BE business process based on the requirements and identified gaps.
- Documented the future To-BE as a sequence diagram with swim lanes through Business Process Model and Notation (BPMN 2.0) format for user acceptance and process flow.
- Actively identified integration Opportunities while documenting the Current As-IS process and communicated the Cost Benefit Analysis reports to the stakeholders.
- Utilized a full stack approach to API development, encompassing both front-end and back-end aspects. Collaborated closely with UI/UX designers and front-end developers to ensure effective integration of APIs into user interfaces.
- Successfully delivered APIs that enhanced data exchange efficiency and improved overall system performance.
- Collaborated and helped Business Program Lead/Manager in prioritizing requirements requests on Jira based on the benefits, urgency and Capacity.
- Created Web Development and Integration Design Flow to create click level document for the Development team to avoid scope creep and to stay on track throughout the development.
- Assisted and guided the development team throughout the development to meet the stakeholder's requirements and helped resolve impediments.
- Continuously collaborated with Experience Owner/Process Owners/Stakeholders to stay updated with updates to application functionality, navigational flow and kept dev team updated related to updates through Daily Stand-up meeting on business user's specifications and updates throughout the development.
- Documented Test Scenario, Test cases and performed UAT sessions to make sure functionality met stakeholder's criteria.
- Led multiple Product Demo sessions with stakeholders for approvals.
- Assisted and guided the development team throughout the development to meet the business requirements and helped resolve impediments.

Business Analyst

Mastercard - O'Fallon, MO

June 2017 to August 2018

Project Description: The objective of this project was to develop a fraud detection system that can effectively identify and prevent fraudulent activities in financial transactions. Through research, analysis, and testing, we aimed to design a system that can analyze large volumes of data in real-time, flagging any suspicious activities for investigation. The system included rules and policies for conducting investigations and was designed to minimize losses due to fraud while maintaining customer satisfaction and trust in our financial services. The goal of the project was to improve the overall security of our financial transactions and protect our customers from potentially fraudulent activities.

Roles and Responsibilities:

- Led requirements gathering workshops, collaborating with fraud investigators, risk managers, and IT teams to define fraud detection system requirements and regulatory compliance considerations.
- Collaborated with cross-functional teams to gather and analyze business requirements, translating them into EPICS, Features, and User Stories that aligned with the project goals.
- Captured the high-level requirements in Confluence and used JIRA for allocating tasks, user story writing, backlog management, issue tracking and user story management.
- Conducted thorough process analysis, identifying gaps and inefficiencies in existing fraud detection workflows (Identified As-is and To-be process). Proposed streamlined processes, resulting in a significant reduction in false positives.

- Utilized data analysis tools, such as Tableau and Excel, to perform in-depth analysis of fraud data, identifying patterns and trends to enhance fraud detection algorithms.
- Prepared detailed presentations to explain the methodology behind fraud detection models, showcasing key metrics and model performance using PowerPoint.
- Leveraged BigQuery to store and analyze large volumes of transactional data, enabling efficient data mining and pattern recognition for fraud detection.
- Employed Cloud Dataflow to process real-time streaming data, enabling real-time fraud detection and alerts.
- Integrated Cloud Pub/Sub to facilitate communication and data exchange between various components of the fraud detection system, ensuring seamless data flow and synchronization.
- Utilized Cloud Storage to securely store and access data inputs and outputs generated during the fraud detection process, ensuring data integrity and compliance.
- Implemented machine learning models using Cloud Machine Learning Engine to detect anomalous patterns and classify potentially fraudulent transactions.
- Leveraged SQL querying and data manipulation techniques to extract and analyze data from various databases, identifying key fraud indicators and facilitating data-driven decision-making.
- Designed system specifications and collaborated with technical teams to translate business needs into scalable and maintainable fraud detection solutions.
- Prepared comprehensive documentation including functional requirements, process flows, and system design specifications, ensuring clear communication and knowledge transfer across project teams.
- Designed page Mockups using Lucid chart, designed Activity Flow Diagrams, Use Case diagrams, Sequence Diagrams.
- Coordinated testing and validation efforts, including API testing, by working closely with the quality assurance team to ensure the system met defined requirements and performance benchmarks. Utilized Postman to develop and execute API test cases and validate system integrations.
- Facilitated effective stakeholder communication, providing regular project updates, addressing concerns, and gathering feedback to ensure alignment with business objectives.

Business Analyst

Guarantee Trust Bank - Lagos

September 2012 to December 2016

Project 1 Description: The Accounts Payable (AP) department handled a significant volume of invoices, purchase orders, and payment transactions on a daily basis. The manual nature of these processes often led to delays, errors, and inefficiencies. To overcome these challenges, the bank decided to implement an AP automation software to streamline its operations.

Project 2 Description: The bank introduced a new program in order to extend their mortgage services to customers with low income. The target was to allow customers buying a house in a low-income area, with a low credit rating to benefit from the program. I worked on the project to build an enhanced automatic mortgage approval system.

Roles and Responsibilities:

- Functioned closely with the corporate business team, Mortgage teams and IT teams to understand the end-to-end process.
- Performed GAP Analysis by understanding the AS-IS business process and TO-BE business process.
- Interacted thoroughly with a set of stakeholders and Subject Matter Experts (SME) for requirements gathering, which was documented and presented in Business Requirement Documents, Functional Requirement Documents.

- Facilitated the scrum ceremonies like Daily Stand-up Meeting, Sprint Planning, Sprint Review, Sprint Retrospective and updated the Burn-Down Chart and tracked the progress of the team on a regular basis.
- Assisted PO in creating Vision Statement and Product Roadmap Document to plan a schedule for all the deliverables.
- Created User Stories by vertically slicing the epics and assisted the development and testing teams in creating tasks.
- Created Data Mapping Specifications Document listing the source to target data maps and the transformation rules.
- Used Postman for API testing and used Swagger for API documentation, as well as tracked defects and bugs in Jira.
- Created QA test plans, cases, scenarios and involved in UAT session.
- Used SQL scripts/queries extensively for data verification of database like Oracle, IBM DB2 Server.
- Led the requirements gathering process for an AP automation solution, collaborating with finance teams, accounts payable staff, and IT personnel.
- Analyzed current AP processes, identified pain points, and proposed automation opportunities, resulting in a 30% reduction in invoice processing time.
- Evaluated multiple AP automation solutions, comparing features, functionalities, and costs, and recommended the most suitable solution.
- Created detailed documentation, including functional and technical specifications, workflow diagrams, and business requirements.
- Collaborated with solution architects and technical teams to design and implement an optimal AP automation solution, ensuring alignment with organizational goals and system integration.
- Developed and executed test plans, validating the functionality and performance of the AP automation solution and resolving issues identified during testing.
- Conducted end-user training sessions, providing ongoing support and addressing user queries to facilitate a smooth transition to the automated AP processes.
- Monitored the performance of the AP automation solution, gathered feedback from users, and implemented process improvements, resulting in enhanced efficiency and cost savings.
- Guided and coached cross-functional teams in adopting Agile methodologies, facilitating effective collaboration and delivery of AP automation projects.
- Organized and facilitated Agile ceremonies, including daily stand-ups, sprint planning, backlog refinement, and sprint reviews, ensuring adherence to Agile principles and practices.
- Collaborated with the product owner and stakeholders to prioritize and refine the product backlog, ensuring alignment with business goals and value delivery.
- Assisted the team in breaking down requirements into user stories, created user story maps, and facilitated estimation sessions to ensure sprint goals were achievable.
- Monitored and tracked team progress, providing transparency through Agile metrics and reporting, such as burndown charts and velocity, facilitating data-driven decision-making.
- Identified and addressed impediments, removing obstacles to team productivity, and fostering a supportive and empowering work environment.
- Promoted continuous improvement by facilitating retrospectives, capturing action items, and implementing process enhancements, resulting in increased team efficiency and product quality.
- Facilitated communication and collaboration between the development team and stakeholders, ensuring transparency, managing expectations, and delivering value to the organization.

Education

MS in Computer in Management and Information Systems

Southern Illinois University - Edwardsville, IL

2022

MS in Human Resources Management

Webster University

2018

Bachelors in Industrial Relation & Personnel Management in Industrial Relation & Personnel Management

University of Lagos

2012

Skills / IT Skills

- MS Office, MS Excel, Jira, SharePoint
- Modeling Tools
- MS Visio, Lucid Chart
- BI and Reporting
- Cloud Platform
- Agile-Scrum, Waterfall, Hybrid
- Requirement Management
- Gap (As-is, To-be) analysis, Change Management, Impact Analysis, Risk Analysis, Cost-Benefit Analysis, Feasibility Analysis, ROI Analysis, SWOT analysis,
- SDLC Methodologies
- Microsoft Azure, AWS Cloud
- Power BI, Tableau, MS Excel
- Defect Tracking/Testing Postman,
