SUMMARY:-

- **Total 8+ years of industry experience as a Business Analyst** in the mortgage with excellent understanding of Business Requirement gathering, Business Analysis, Business Process Modeling.
- Worked closely with **project stakeholders, SMEs**, staff to understand the requirements and specifications for new applications along with re-engineering existing applications.
- Full understanding of Microsoft Visio, Rational Rose Modeler, Rational Requisite Pro, **Unified Modeling Language (UML)** in the context of **Waterfall methodology and Agile Methodology SCRUM**.
- Effective in Facilitating **Joint Application Development (JAD)** sessions to gather, synthesize and prioritize requirements using interviews, document analysis, requirements workshop, site visits, and surveys.
- Experience in conducting **GAP analysis, Risk analysis and Cost/Benefit analysis**.
- Extensive experience in the development, implementation and integration strategies within a **team-oriented** environment, utilizing quantitative and qualitative analytical skills.
- Excellent Business writing skills in writing project documentation such as: **Business Requirements Document (BRD)**, Functional Requirement Document (FRD), User Stories and Use Case Specifications.
- Working expertise in Workflows and UML diagrams such **Use case** diagrams, Activity diagrams, **Sequence diagrams** and Class diagrams.
- Worked on **Electronic Data Interchange (EDI)** transaction sets 834 (Members Enrollment) and 837 (Claims Adjudication Process).
- Strong proficiency in the entire **Software Development Life Cycle (SDLC)** with outstanding capabilities in analysis, problem definition and requirements gathering.
- Proficient in reporting tools like **Business Objects and Crystal Reports**.
- Flexible and **versatile** to adapt to any new environment with a strong desire to keep pace with latest technologies.
- Excellent problem solving, communication, **analytical**, interpersonal skills and ability to perform **independently** or as part of a team.
- Familiar in designing and developing test plans and **test scripts**.
- Ability to work both independently and in **cross-functional** team environments while managing and prioritizing **multiple** projects.

Professional Experience:

Client: eBay

Feb 2021-Present

Role: Business Analyst Integrations

Responsibilities:

- Collaborated with client business leaders and end users to understand their business objectives and processes.
- Include any relevant certifications in program management or related fields, such as Project Management Professional (PMP) or Agile Certified Practitioner (ACP). Also, mention your educational background, highlighting degrees or courses relevant to program management.
- Primary point of contact for all stakeholders including business users, internal technical teams

- Provide day-to-day management on multiple projects and support to related IT issues.
- Responsible for the coordination of change requests and ensured all the project changes were executed correctly and UAT plans.
- Work Breakdown Structure (WBS) Elements: In SAP PS, project managers create a hierarchical Work Breakdown Structure (WBS) representing the project's tasks and sub-tasks. Each WBS element is assigned a point value based on its size, complexity, and estimated effort.
- Project manager is responsible for creating a comprehensive project plan that includes defining the scope, goals, deliverables, timelines, and budget for the Q like project. They need to ensure that the project plan aligns with the organization's overall business objectives.
- Led the implementation of a new innovative chatbot for candidate experience which involved conversational AI. Scaled up from one market to several markets within a year and a half, enabling an average of 5,000 candidates' engagement with the chatbot each week in over 10 languages.
- Using Microsoft Word and Excel to create detailed project plans, develop project documentation, and maintain project schedules, ensuring that project objectives, milestones, and tasks are clearly defined and communicated.
- Preparation of proposals for additional contract bids, RFP and statement of work (SOW) preparation, functionality, and price estimation, including onshore and offshore teams, 24 hour support, Disaster Recovery, infrastructure, architecture design, etc.
- Develop detailed project plans that align with Lean Six Sigma methodologies.
- Project managers with vendor experience are skilled in the process of vendor selection. They can identify potential vendors, evaluate their capabilities, and make informed decisions about which vendors to engage based on factors such as expertise, track record, cost, and alignment with project goals.
- Project manager is responsible for ensuring that the Qlik solution meets the quality standards set by the organization.
- Integration with Azure Cloud and chatbot.
- Effective vendor experience involves negotiating contracts that clearly outline deliverables, timelines, costs, and other terms. Experienced project managers can negotiate favorable terms while ensuring both parties understand and agree to their respective responsibilities.
- Designed and developed restful APIs for various micro services, enabling seamless communication and integration between different components of the application.
- Implemented service discovery and load balancing mechanisms using tools like Consul and Nginx to ensure efficient routing and distribution of incoming requests among micro services.
- Ensure that the project adheres to relevant quality system regulations and standards.
- Following Agile (Scrum/Kanban) software development methodology for project implementation and execution.
- Oversee the creation, review, and maintenance of project documentation to ensure compliance with quality system regulations
- Develop a comprehensive project plan that defines the scope, objectives ,deliverables, timelines, and budget for the SAP HANA project.
- Provide project support to project team - Business Analyst, Developers, QA on assigned project/work in a timely manner.
- Provide leadership and direction to the project team.
- Ensure that the project complies with relevant regulatory requirements, including QSR or ISO 13485.
- Leading the planning and execution of HPC projects from start to finish, ensuring that all technical and business requirements are met within the allocated budget and timeline.

- Collaborating with cross-functional teams to define project scope, milestones, and deliverables, and ensuring that all team members understand their roles and responsibilities.
- Ensure that change control processes are in place, documented, and aligned with regulatory requirements.
- Manage and optimize the utilization of personnel, equipment, and materials.
- Using Microsoft PowerPoint to develop visually engaging presentations for project status updates, stakeholder meetings, and executive briefings, effectively communicating project goals, achievements, and key deliverables to various audiences.
- Work closely with the development team to build a solution that meets the requirements.
- Worked with project manager to document and manage change request and worked with SMEs to define multifamily mortgage business rules.
- Participate in creating training programs for new systems.
- Provide or arrange for Lean Six Sigma training as necessary.
- The project manager should identify potential risks and challenges that could affect the successful implementation of the Qlik solution.

Client: Mercedes-BenzUSA

Aug 2017-Jan 2021

Role: Sr. Business Analyst
