Summary

Eight years experience in iOS native development, including aspects of networking, databases, RESTful web services, multithreading, geolocation, external device interaction, and UI design and development. Built apps and supporting libraries related to guided cooking, personal safety, driving behavior, automobile infotainment, and over-the-air updates of embedded systems.

Tools & Skills

- Objective-C and Swift using Xcode.
- Workflow tools: Sourcetree GIT client, GitHub, Jira, App Store Connect, TestFlight, profiling with Instruments
- Databases: Core Data, Realm, SQL Server
- Frameworks: Bluetooth, AFNetworking, Core Location, Apache Thrift, UIKit, XCTest, others
- Other languages/technologies: Java, C#/ASP.Net, Smalltalk, C/C++, XML, JSON.
- Full software development life cycle experience. SCRUM / Agile process, unit testing, continuous integration. Focused on reducing technical debt through refactoring.
- Experience with all levels within a development organization, working with end users, developers, and project management.
- Excellent communication skills, including presentation, technical writing and editing.

Experience

iOS Software Engineer, October 2021 – September 2022, Hestan Smart Cooking, Seattle, WA

- Maintained and improved the Hestan Cue smart cooking app, which connects to proprietary and GE induction cooktops via Bluetooth.
- Implemented several iterations of new UI workflows using the existing Bluetooth framework and hardware state machine.
- Worked closely with backend and Android developers to ensuring platform parity.

Mobile Software Engineer, 2019 – 2021, Xevo, Inc., Bellevue, WA

- Contributed to in-house Xevo Marketplace framework to facilitate purchases from various vendors using the automotive headunit. General refactoring of network stack and UI, migration of auto layout to use SnapKit.
- Team member on new and legacy iOS projects for General Motors. Worked on teams of typically 8-10 developers and testers, ensuring parity between iOS and Android implementations. New feature contributor to OnStar Guardian app, which is available in App Store. Maintenance contributor to myChevrolet (part of the suite of GM branded apps), also in App Store.

Mobile Software Engineer, 2013 – 2018, Airbiquity, Inc., Seattle, WA

- Built an app which collects and analyzes Core Location data to measure and analyze driving behavior. App uses Core Data for persistence, communicates with backend via RESTful web services. Realized significant performance improvements by profiling with Instruments.
- Team member on several releases of infotainment apps used to drive automotive console displays using Apple's MFi protocol. Refactored networking framework with a test-first approach using XCTest. Worked closely with backend developers to optimize RESTful web service calls to improve performance.
- Developed a proof-of-concept "bridge" app to allow a Raspberry Pi to consume backend services and upload files using Background Networking, including the associated customer-facing UI using an MVVM approach. Local database was initially implemented using Realm as proof-of-concept, then refactored using CoreData.

Education and Professional Certifications

Pennsylvania State University, B.S. in Molecular and Cell Biology, with Distinction.

University of Washington Extension, Coursework leading towards the Certificate in C++ Programming.
