

Owais

Sr. Business Systems Analyst

Cell: +1 872-299-0413 ▪ E-mail: owais.95a@gmail.com

SUMMARY

- Having 10 years of good experience in Business Analyst, Manual/Automation Testing, Process Improvement, Requirement gathering and elicitation. As a Business Systems Analyst, worked closely with business users, developers, and subject matter experts through all phases of the SDLC.
- Worked in the industry using SDLC methodologies like Waterfall, Agile-Scrum, Kanban, and Waterfall-Scrum Hybrid
- Experienced in using techniques for requirement elicitation such as Brainstorming, JAD sessions, Observations, Job shadowing, one on one interviews, prototyping, and requirements/document analysis
- As an Internal Auditor advising departments like HR/Training, IT, Support, Admin, and Operations & Delivery on Process Improvement, and continuous improvement methods based on ISO 9001, 27001 and CMMI 3.0 standards.
- Extensive experience in working with cross functional teams to understand the growth of team in the organization.
- Facilitated various Scrum ceremonies- Sprint Planning, Sprint Review, Sprint Retrospective, Daily Scrum, and Backlog Grooming to improve the team's performance while focusing towards a Sprint Goal
- Excellent Business writing skills in BRD, FRD/FSD, Technical Specifications document, SRS and process flows using UML diagrams such as use cases, activity, sequence, and data flow diagrams in Business Process Modeling.
- Conducted detailed discussions with Clients on Phones/WebEx to gather the requirements and get approvals
- Documented and Conveyed the Business Rules, Alert/Error messages, potential exceptions, Cross – site scripting injection attack (XSS) prevention methods and best practices
- Good knowledge and experience on Distribution Management Systems (DMS), Warehouse Management Systems (WMS), Order Management Systems (OMS) for Omni-Channel Retailers.
- In depth knowledge and hands on experience on Supply chain optimization
- Encouraged the development team to follow best practices -Naming Conventions, version control, better exceptions handling, unit testing, error/exception logging and comment writing in web configuration and in the Functions/Methods
- Designed Mockup's/Wireframe for the requirements to get a visual understanding of the application under development, provided Functional/Technical Consulting for the application with a holistic view
- Knowledge and experience in performing GAP Analysis, Cost-Benefit Analysis, Feasibility Study, Root Cause Analysis, SWOT Analysis and Impact Analysis for planning and execution of business decisions
- Skilled in conducting Internal Audits for projects to streamline the Organizational Policies, Procedures, and Processes
- Designed both static and dynamic Unified Modelling diagrams (UML) such as Use Case Diagram, Activity Diagram, Sequence Diagram using MS Visio and Lucid Charts.
- Designed Low Fidelity and High-Fidelity Mock-ups and wireframes using Balsamiq to assist UI/UX team.

- Conducted detailed project analyses of Business Processes by GAP analysis (AS-IS & TO-BE), Risk analysis, SWOT Analysis, Impact assessment, Cause and effect analysis (Root cause analysis), Effort estimation, Cost-Benefit analysis, & Feasibility Analysis.
- Strong functional knowledge of various AWS modules for cloud computing including AWS Lambda, AWS EC2, AWS S3, Amazon API Gateway, Amazon Kinesis Firehose and Amazon Dynamo DB.
- Experience in Micro services and Service Oriented Architecture (SOA) with experience working with web services
- Proficient in various structured data types used by RESTful web services for API calls like JSON, XML, HTML, CSS.
- Experience in creating conceptual and logical data models, documenting migration plans, Data Mapping specification document and Data profiling to clean and convert source data to target format.
- Excellent insights of data warehousing, data profiling, data migration, ETL and data visualization processes with hands on experience in Informatica PowerCenter.
- Prepared data visualization reports using Tableau through connecting csv, excel and database files showcasing the business insights and progress reports using Histograms, Heat Maps, Symbol Maps, Pie Charts etc.
- Created and maintained test plans, test cases, test scenarios, test scripts and maintained test data using HP ALM QC as well as Microsoft Excel to ensure complete test coverage.

TECHNICAL SKILLS

Technical Skills	Versions / Tools / Software
Requirements, Project Management.	Atlassian-JIRA, HP-ALM, VSTS, MS Project, MS SharePoint Server
Testing, Modelling and Web services	Visio, Draw.io, Google Drawings, SOAP, REST, AJAX, XML, JSON, WSDL, WADL, XSD, DOM, Salesforce CRM
Development IDE, Reporting Tools	Macro Editor, Eclipse, PowerShell, SSAS, Tableau, IBM Cognon's, MS office suite.
Version/Revision Management Tools:	CVS, GIT, SVN
Statistical Tools:	SAS, Minitab, Excel
ETL Tools:	Informatica PowerCenter, IBM Infosphere DataStage, SSIS
Database Management Tools:	Microsoft SQL Server, AWS S3
Process Automation Tools	UiPath v8, Automation Anywhere v7
Modeling Tools	MS Visio (v.14, 15, 16), Lucid Chart, Balsamiq,
API Tools	Swagger, Postman
ETL Tools	Informatica Power Center

Data Warehousing	OLAP, Multidimensional Analysis, Data Mining, Slicing/Dicing, Drill Down/Roll Up.
------------------	---

EMPLOYMENT EXPERIENCE

Common Spirit Dignity Health

Remote

(Jul'2021 - Present)

Sr. Business System Analyst

- Studied the HPA and HOEPA guidelines along with the development team to enable the feature of in-site app tour to clarify to the users of the rules and regulations to continue to pay or skip the PMI depending on the remaining mortgage payments/amount.
- Worked with stakeholders and Business Owners to understand and develop user stories for CMS (Content Management System) and DAM (Adobe AEM) implementation.
- Worked in SAFe (Scaled Agile Framework) with Scrum framework at the team level utilizing Kanban Visualization & Board.
- Used JIRA for the project planning, scheduling & status reporting, while maintaining the Kanban board to visualize the workflow.
- Performed GAP analysis reviewing foibles in the existing As-Is legacy application and recommended possible areas of improvements in future To-Be system. Facilitated JAD sessions, interviews with SMEs & PO with Prezi Business Presentation to better understand requirements of mortgage application from Loan Origination and Processing to Closing and Risk Analysis.
- Held Knowledge Transfer Sessions while also assuming the role of Proxy Product Owner in certain instances & sprints. Made use of JIRA to draft epics, stories, tasks and Sprint Burndown Charts. Also validated tasks with SMART criteria of each one.
- Worked to gather requirements for migrating of Content from portal to Adobe AEM and functionalities including Multi-site management and multi-channel management and Digital Asset Management (DAM).
- Worked on workflows, scalability and capacity panning requirements for Adobe AEM authors and publishers.
- Worked on requirement for AEM integration with Adobe Test and Target. Defined and worked on their settings.
- Helped develop MVP with features enough for initial review after product grooming, developing User Stories with the help of Atlassian JIRA, prioritizing using MoSCoW model, proposing Acceptance Criteria and collaborating with the Product Owner.
- Verified validated & prioritized the User Stories before organizing them into Product Backlog based on Done and Ready criteria.
- Prepared Wireframes, Mockup Screens and drafted the UML diagrams as Use Case, Activity and Sequence diagrams for proper visualization to design the system requirements. Created workflow, use case, object, business and functional requirement models.
- Understood and analyzed current order management process to be able to predict the impact of decisions or actions on the system and enterprise.
- Performed GAP Analysis by understanding the AS-IS business process and TO-BE business process and created business process model and notation (BPMN).
- Identified and analyzed needs for various functionalities by using various techniques such as JAD, Document Analysis, SWOT Analysis, Requirements Workshops, and Interviews with Subject Matter Experts (SMEs) and project stakeholders.

- Analyzed Business Requirements and segregated them into high- and low-level Use Cases, Activity Diagrams according to UML methodology thus defining the Data Process Models
- Helped in translating requirements in the form of user stories and also wrote acceptance criteria
- Interacted with premium distributors and dealers to understand the pros and cons of the product and its distribution system, and its impact on the overall supply chain.
- Developed Business Requirement Documents, functional requirements specifications, use cases, storyboards and GUI mockups.
- Worked on front-end and back-end Application Programming Interface (API) to define the functionalities of user interface (UI).
- Obtained various Element and their description pertaining to JSON under API documentation.
- Worked on e-Business and e-Marketing data collection, design, implementation, and reporting.
- Studied the impact of Change Requests in business requirements and updated them in requirements documents.

Environment: Visual Studio, ASP.NET, C#, MVC, Razor, WCF, SQL Server, jQuery, Team Foundation Server, IIS, .Net Framework 4.0, Visual source safe, CSS, HP QC, Tableau

Barclays

Jersey City, NJ

(Apr'2020 – Jun'2021)

Business Systems Analyst

- Wrote user stories, set Acceptance Criteria, checked if they were Done & Ready and passed the criteria set by the INVEST rule.
- Responsible for integrating user stories to agency management system, crisis reporting and risk mitigating for an automatic system to overcome it quickly. Done elicitation of requirements by conducting JAD sessions, Semi-structured & Structured Interviews, Brainstorming, Observations and collaborated in creating wireframes and mockups using the modeling software like Balsamiq.
- Helped Product Owner (PO) break down Epics and Features into User Stories using Slicing techniques. Worked with Development team in proposing, negotiating Definition of Done and Acceptance criteria for Potential Shippable Product Increment (PSPI).
- Created UML diagrams Use Case, Sequence and Activity along with Business Flows, Business Process Modeling & Notation (BPMN) using MS Visio. Executed SQL queries of Data Definition Language (DDL), Data Manipulation Language (DML) & Data Query Language (DQL) to perform CRUD operations on the data from the data sources under consideration after the data profiling.
- Created & allotted bulk tasks for the developers to work on task. Conducted Sync up calls with offshore teams through the Skype.
- Took part in integrating AWS (Amazon Web Services) with application for scalable cloud computing, storage, web API services.
- Organized meets with AWS integration and bank's internal teams for several functions such as Card Transaction, Process, Trouble Tickets, Payment Requests etc. Collaborated with development team to integrate SET (Secure Electronic Transaction) (Trademarked by SET Inc.) for service message integrity, authentications of all financial data and encryption of the sensitive data.
- Created AWS EC2 instances over the cloud and maintained those instances from time to time. Facilitated easy transition of data from AWS S3 buckets to MySQL databases for granularity & easy access of data through different relational databases & platforms.

- Assisted in setting up Databases, Table Structures, Schemas, Marts & executed OLAP operations. Collaborated with Architects & Engineers in ETL processes, Source to Target Mapping, Data Governance Processes while documenting the technical metadata.
- Made sure that API related business and functional requirements are fulfilled by API Proxy, automated load and performance tests. Walked stakeholders through requirements with Development and QA Teams to develop the test plans, strategies, scenarios.
- Backed System Integration, Smoke, Regression, Black Box & User Acceptance Tests (UAT) in the manual and automation modes.
- Maintained Product Backlog Items (PBIs), defects by prioritizing & tracking using JIRA. Formulated various charts, reports, dashboards for BA using Tableau BI. Facilitated Sprint Ceremonies & Retrospectives while acting as the Proxy Scrum Master.
- Assisted in removal of impediments and monitoring defect logs, that helped in calculating the Team's Velocity for easy, accurate and efficient planning upcoming sprints without missing the deadline thus delivering the PSPI on scheduled time to the end-users.
- Maintained, backed different versions of essential documentation with Concurrent Versions System (CVS) for the future uses.

Environment: Agile Scrum, JIRA, CVS, Canva, AWS, MS Office Suite, HP ALM, Balsamiq, Tableau.

Bright speed
Charlotte, NC

(Dec'2017 – Mar'2020)

Business Systems Analyst

- Conducted GAP analysis for AS-IS and TO-BE of the process to identify and validate requirements.
- Worked with Case Management, Actimize. Trade Surveillance and ad-hoc filtering tools to assure compliance.
- Assisted in Transaction monitoring, watch list filtering, Detection engine, KYC module, AML system implementation and Risk based filtering.
- Designed UI components, screen mock-ups, process flows, business logic, configuration requirements, Requirements traceability matrix, and technical diagram
- Created the UML for structuring the whole project. Identified Use Cases and develop the Use Case diagram, Activity Diagrams and Sequence diagram.
- Assisted DAs in data modeling process with conceptual and logical E-R diagrams & designing database schema to develop an accurate DWH architecture. Helped with data normalization to eliminate redundancy & easier processing queries in OLTP ops.
- Performed Dimensional Modeling & assisted Systems Architect to create dimension & fact tables in Schema. Used IPC to perform ETL ops and manipulate data. Mapped data sources to data target destinations and performed various transformations.
- Held exhaustive discussions with the testing team to verify & validate the integration of servers and code builds before the final deployment. Offered expertise in execution of Smoke, System, Black Box, White Box, Regression and the Performance tests.
- Used web methods of GET, POST, PUT and DELETE for testing API integrations and validated the responses, response times and error codes by executing HTTP requests using SoapUI. Designed test plans, scenarios, cases for correctness & the quality.
- Supported the QA and Dev. teams in execution & preparation of test documents like Test Plans, Cases, Scenarios and tracked them to user stories with help of Requirement Traceability Matrix (RTM). Drafted various training and testing material for end-users to appropriately perform User Acceptance Testing (UAT) & helped them in actual execution of UAT and documentation.
- Presented various Key Performance Indicators (KPI) by generating reports using Prezi Business for presentation and Power BI & Tableau softwares for Analysis & Visualization. Timely tracked

evolution of software build, integration of individual components and reported to the key stakeholders and Project Manager through collaborative online tools like JIRA, Confluence.

Environment: Agile Scrum, Tableau, Informatica PowerCenter, JIRA, Confluence, Prezi Business, Google Analytics, MS Office Suite (Word, Excel, PowerPoint).

T.D. Bank

Cherry hill, NJ

(Oct'2015 – Nov'2017)

Business Analyst

- Documented/Contributed to GAP analysis with the Project Manager in planning the system transition
- Conducted JAD sessions and interviews with SME's & stakeholders to elicit the requirements for the system
- Studied organization-project, processes, policies and procedures to get a detailed understanding of the project. Analyzed, modified and validated Business Requirements (BRD) and Systems Requirements (SRS)
- Created Use Cases and Designed UML diagrams like Use Case, Activity and Sequence using MS Visio
- Monitored, Managed and Tracked requirements using HP ALM throughout Application/Project Life-Cycle
- Collaborated with the QA team to design and develop Test Plan and Test Scenarios and Cases, involved in ETL testing process in validating the data, reviewing data dictionaries and in test data preparation
- Analyzed Market trends by performing Data Analysis on R using Python libraries and regression score models
- Involved in creating conceptual/ logical ER diagrams and design DB Schemas for in developing the DW
- Identified and Integrated various data sources like OLTP and Flat files to the OLAP using Informatica and performed Data Verification, Validity and Normalization in maintaining the accuracy and effectiveness of data
- Generated periodic reports using Tableau and Excel for the management to make effective business decisions
- Construct PL/SQL Joins, Views, procedures queries to test and fetch the data from in-house OLTP DB's
- Performed Data Mining and constructed SQL queries to find correlation and patterns in existing data, used Tableau in generating effective reporting to provide BI using various matrices critical to decision making
- Assisted the team in preparation of the training modules, provided steps/tutorials to generate reports

Environment: Waterfall, MS Office, Tableau, Informatica, R, MS Visio, MS Project, HP ALM, Wireframes, Mock-Up Screens, SQL Server, SharePoint, GAP Analysis, UML, UAT testing.

Value Labs

Hyderabad, India

(Mar'2014 – May'2015)

Quality Analyst

- Gathered and documented Use Cases, Business Rules, maintain Requirements/Test Traceability Matrices.
- Perform workflow, process diagram, and Gap Analysis to check the compatibility of the existing system infrastructure with the new business requirements and to derive requirements from the

existing system.

- Address production, UAT issues, proper action was taken accordingly based on priority and requirement.
- Developed detailed documentation, including business requirements, functional specifications, data and security requirements, testing approach, test cases and user acceptance criteria.
- Validated testing methodology and approached Quality Assurance team on a system by system basis.
- Participated in quality gate reviews providing expertise around business acumen related to functional design, technical specifications, and user experience.
- Ensured equipment's required for Testing the application were available to the QA team to perform testing.
- Played a key role in standardizing bug life cycle in Scrum process in a project by suggesting improvements and efficient usage of – Visual Studio. Ensured the DLL's that connect the equipment, work as per the requirement and documented Web API's data for Request and Response JSON/XML in excel and word
- Interacted with the customer and program team to evaluate and prioritize the stated user requirements and analyzed complex issues and provided comparative analysis of alternatives leading to a solution recommendation and action plan. Executed SQL queries and exported data to Excel for data analysis and ad-hoc reporting.
- Provided technical expertise to define defect remediation process for QA team and detailed estimates for the change control process, developed test- plans/scenarios/cases/data for use during testing.
- Assessed the: aesthetics, layout, consistency, and user effort in determining user interface designs
- As a part of the QA team performed Manual Testing and logging the bugs in VSTS, communicating with the development team members in helping them reproduce the bugs for fixing.

Environment: Visual Studio Team Services, Scrum, Agile, Manual Testing, Regression Testing, Equipment Testing.

EDUCATION AND PROFESSIONAL DEVELOPMENT

- Bachelor of Engineering, Hyderabad. **(2015)**
