

**Pavan Darshan Doddala**  
**Lead Business Systems Analyst**  
**Phone: (201)708-8584**  
**Email: shashi@hltechus.com**

Professional with more than 8 years of experience working as a business analyst and business systems analyst on a range of projects in the healthcare, health insurance, and pharmaceutical industries. Highly accomplished, highly talented, goal-oriented, and multidimensional possess extensive experience in recording and presenting the deliverables at each project milestone a thorough understanding of business process management, business process modeling, and business process reengineering (BPR) in the medical care association, payer systems, and health insurance fields (medical care programs).

#### **PROFESSIONAL SUMMARY:**

- Extensive expertise in diverse **healthcare domain concepts**, including **HIPAA, HITECH**, and end-to-end claims processing from submission to adjudication. Adept at identifying **claims processing issues**, tracing their origin, and providing prompt resolutions. Comprehensive knowledge of **Protected Health Information (PHI)** regulations and **standards within the healthcare industry**. Proficient in various **data formats**, such as **Electronic Data Interchange (EDI)** and **HL7 Interface Implementation**.
- Strong knowledge of **Medicare, Medicaid Management Information System (MMIS)**, Managed Care Plans such as **Health Maintenance Organizations (HMO)**, **Diagnosis Coding Standards** like **ICD-9**, and **ICD-10**, **Claims Payment Processing** in accordance with **HIPAA**, **Electronic Data Interchange (EDI) 5010 X12**, **False Claim Act (FCA)**, **Affordable Care Act**, **EDI Transactions viz. 834, 835, 837**, **Patient Protection & Affordable Care Act (PPACA)**, **Trizetto FACETS Implementation**, **FACETS Data Dictionary**, **Consolidated Clinical Document Architecture (CCDA)**, functioning of **Electronic Health Record (EHR)**, **Electronic Medical Records (EMR)**, **Stark Law**, and **Laboratory Information Management System (LIMS)**.
- Familiar with the working of **Fast Healthcare Interoperability Resources (FHIR)** for facilitating interoperability between systems, **Health Insurance Marketplace / Exchange (HIM/ HIX)**, **Medicaid Information Technology Framework (MITA)**, **Health Information Trust Alliance (HITRUST)**, **Clinical Trial Management Systems (CTMS)**.
- Strong experience in various software development lifecycles methodologies such as **Conventional Waterfall**, **agile methodologies like SCRUM**, **Scaled Agile Framework (SaFe)**, **Hybrid Water-Scrum-Fall** and familiar with **Rational Unified Process (RUP)**, **Spiral**, **XP**, **Kanban**, **Hybrid Scrum**, and **Large-Scale Scrum Framework (LeSS)**.
- Expertise in eliciting requirements using multifarious techniques such as conducting **one on one Interviews**, **Document Analysis**, **Requirements Workshops**, **Observation**, **Focus Groups**, **Prototyping**, **Joint Application Development (JAD)**, **Card Sorting**, **Document Analysis**, and **questionnaires**. Performed **AS-IS**, and **TO-BE** analysis & documented it.
- Significant Experience in developing various business analysis artifacts such as **Business Requirement Documents (BRD)**, **Functional Requirement Documents (FRD)**, **System Requirement Specification (SRS)**, **System Requirement Documents (SRD)**, **Use cases**, **Hybrid artifacts**, **Risk Assessment Documents**, and **In-process review report documents**.
- Adept at conducting **Stakeholder Analysis**, **Risk Analysis**, **Feasibility Analysis**, **Cost Benefit Analysis**, **GAP Analysis**, **SWOT Analysis**, handling **Change Management** processes, and **Technical and Business Impact Analysis**.
- Experiences in developing **Wireframes**, **Mock-up Screens**, **Low-fidelity prototypes**, and **High-fidelity prototypes**. Experienced at transforming **business requirements & user expectations** into detailed specifications using **Unified Modeling Language (UML)-Sequence diagrams**, **Activity diagrams**, using **Lucid Chart**, **Rational Rose**, **Balsamiq**, and **MS Visio**.
- Demonstrated expertise in **Agile software development methodologies**, particularly **Scrum**, including a thorough understanding of **Scrum ceremonies** such as **Sprint Planning**, **Daily Stand-ups**, **Sprint Review**, and **Sprint Retrospective**. Participated in **Scrum of Scrums (SOS)** meetings to manage dependencies and **resolve issues** across multiple teams. Utilized collaborative tools such as **MS SharePoint** and **Confluence** to maintain transparency and facilitate efficient communication.
- Efficiently documented various **Scrum Artifacts** such as **Product Backlog**, **Release Backlog**, and **Sprint Backlog**.
- Refined the **Information Radiators/Big Visible Chart (BVC)** with the **Scrum Master**, including the **Sprint Burn-up chart**, **Sprint Burn-down charts**, **Release Burn-up chart**, **Release Burn-down chart**, and **Control charts**.
- Experience with creating **Data Mapping Documents**, **Data Modeling (Conceptual, Logical)**, **E-R Diagrams**, **Backup and Data Migration strategies**, and **Data Validation** using **SQL queries** on **MySQL Server**, and **Microsoft SQL Servers**.
- Experience in **Data Management**, **Data Source Exploration**, **Target data analysis**, **Data Cleansing**, **Business Intelligence**, **Data Migration**, **Metadata Management**, **Data Analysis & strong knowledge of Data Governance**.
- Actively involved in documenting, validating & testing different **Application Programming interfaces (API)** such as **SOAP API's**, **REST's API's** and **Real-time API's** using software like **Apigee**, **POSTMAN**, and **SWAGGER**. Strong experience in performing **API Documentation** using various tools like **MS Word**, **MS Excel**, **SWAGGER**, etc.
- Used **SQL joins**, **select aggregating functions** to query data, source system assessment & for performing data analysis. Knowledge of **Views**, **Joins**, **Order**, **Group by**, **Stored Procedures**, **Subqueries**, and **Case Statements** within **SQL**.
- Hands-on experience with tools like **JIRA**, **Confluence**, **Informatica**, **HP ALM**, **MS-Project**, **Rally**, and **Zephyr**.

- Experience in assisting testers with developing **Test cases, Test plans, Test Scenarios, Test analysis reports, Test Summary Reports, and Requirements Traceability Matrix (RTM)**, assisted with testing techniques like **Unit testing, Integration, System testing, Regression testing, Smoke testing, Sanity, Black Box, White Box, Grey Box testing**. Assisted the **User Acceptance Testing (UAT)** team in performing **UAT Test** and gathered the clients' feedback during that phase. Possess extensive experience in **Bug and Defect tracking** and their fixing by using bug tracking tools like **HP-ALM, HP-QC, and JIRA-Zephyr**
- Experienced in using **Tableau**, to create interactive dashboards and reports like **heat maps, bar graphs, pie charts, and pivot tables** to derive business insights from **OLAP cube** and used **Tableau** connectors to embed insights to dashboards.

#### **TECHNICAL SKILLS:**

|                                         |                                                                                                                                                              |
|-----------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Healthcare and Healthcare Pharma Domain | HIPAA, ICD 10 CM, HITECH Act, HL7 international standards, ISO regulatory compliances, ICD-10, SNOMED, RxNORM, LOINC, LIMS, ELN, SDMS, EDMS, EHR, EDI system |
| Modeling tools                          | MS-Visio, Lucid Chart, Balsamiq                                                                                                                              |

| Business Skills                         | Change Management, Impact Analysis, JAD Sessions, Project Planning, Project Scheduling, Issue Management, Conflict Management, Interviews                    |
| Project Management skills/Tools         | Rational Requisite Pro, MS Project, Rally, JIRA, Confluence, SharePoint, Trello                                                                              |
| Architecture/Framework                  | Service-Oriented Architecture (SOA), 3-Tier Architecture, n-Tier Architecture                                                                                |
| Cloud Technologies                      | Amazon AWS, EC2, S3, Lambda, WAF, Cloud Front                                                                                                                |
| Databases                               | Microsoft SQL server, Oracle, DB2, Apache Spark, Kafka, Spark SQL                                                                                            |
| Operating systems                       | Windows XP, Vista, 7,10                                                                                                                                      |
| Testing tools & Defect Management       | Selenium, HP QC/ALM, Cucumber, FitNesse, JUnit, Appium, Rational Clear Quest                                                                                 |
| Data Warehousing                        | Enterprise Datawarehouse, Data Marts, ETL                                                                                                                    |
| Databases and ETL Tools                 | SQL Server, Informatica PowerCenter, Informatica MDM, IDD                                                                                                    |
| BI and Reporting tools                  | Microsoft Power BI, Tableau, Cognos, SSRS                                                                                                                    |

#### **RELATED PROJECTS**

**Carelon Behavioral Health (Elevance Health) – Boston, Massachusetts**  
**Sr. Business Systems Analyst**

**October 2023 - Present**

##### **Automated Claims Adjudication and revamp the telemedicine system**

This project focuses on modernizing the existing system. Additionally, it aims to **optimize the processing of medical claims through a scalable and cost-effective system**. The project involves the development of a **streamlined claim adjudication workflow that assesses the authenticity, correctness, and coverage validity**. By achieving these goals, the project aims to significantly enhance efficiency, **reduce processing time, elevate customer satisfaction, mitigate financial risks, and proactively prevent fraud within the healthcare system**.

##### **Roles and Responsibilities:**

- Demonstrated exceptional decision-making abilities in analyzing complex situations, devising solutions, and recommending appropriate actions. **Facilitated testing meetings and excelled as a liaison between application groups, external agencies, and offshore teams**. Spearheaded process improvement initiatives by leading process mapping sessions with key stakeholders. Identified gaps in the current state and employed **Work Breakdown Structure (WBS)** to devise **high-value, low-risk process improvement solutions**.
- Partnered closely with stakeholders to elicit and prioritize business requirements. Facilitated this process through brainstorming, focus groups, and interviews, and transformed these requirements into various artifacts such as **INVEST user stories with acceptance criteria in Gherkin format, and use cases, and contributed to the product roadmap**.
- Engaged in demonstrations, presentations, and discussions with clients while collaboratively working with cross-functional teams. Employed use case diagrams, **BPMN, and UML diagrams to create a shared vision of success. Presented mockups and wireframes utilizing tools like MS Visio, effectively translating customer requirements into MS Project**.
- Provided invaluable assistance to the RTE and Product Owner in shaping the product vision, scope, and BRD. Actively participated in conducting **EPICS, User Story Writing sessions, and determining Acceptance Criteria with SMART metrics and DOR**.
- Formulated **storage requirements and data retention policies in collaboration with data scientists, defining data validation rules and metric creation for processing claims**.
- Collaborated seamlessly with **QA and developers to craft API test plans and test cases for functionality, performance, and security testing using Postman**. Proficiently understood **API specifications, authentication methods, endpoints, and request & response formats (JSON)** and created concise and accurate documentation using Swagger while providing guidance on **API usage**.
- Conducted comprehensive data validation by **assessing various metrics, viewing logs, and running complex SQL queries like**

**Joins, Union, Sum, and Max.** Utilized advanced **SQL techniques like a window, Indexing strategies, and recursive** to ensure referential integrity and maintain consistency within multiple data tables, employing a variety of SQL Constraints as needed.

- Leveraged MS Excel (utilizing functions like **VLOOKUP, COUNTIF, and PIVOT**) and executed **MS SQL queries** (including select, update, and Joins) to **perform in-depth claim data analysis**. Proficiently **handled data validation to identify null values and inconsistencies**. Utilized queries to integrate data and create metrics for Analytics for Health.
- Meticulously crafted the **Requirements Traceability Matrix in close collaboration with QA**, ensuring comprehensive mapping of requirements to **test cases for thorough validation**. Worked alongside the **Test Lead and Eligibility Determination** specialists to assist in **documenting test plans, test cases, and scenarios**. Generated **SIT and UAT test cases, along with UAT test data to capture edge cases**. Actively participated in internal and client **UAT meetings, providing support for requirements-related queries. Additionally, executed internal sanity testing.**
- Efficiently employed **SharePoint as a centralized hub** for team and ART communication, creating **version-controlled pages, documents, and libraries for seamless sharing across teams**. Expertly managed daily routines with workflows and synchronized files on the Azure cloud.
- Skillfully designed compelling and interactive dashboards **using Power BI to present insights and KPI reports**, including potential **fraud distribution, ad-hoc reports, claim processing days versus fraud, geographic analysis, and claim amount versus fraud.**

**Environment:** Agile-Scrum SDLC, MS Project, MS Visio, MS Office, MS Excel, Share point, Informatica – Axon, Oracle 19C, TOAD, SSMS, Power BI,

Providence St. Joseph Healthcare – San Diego, California  
Sr. Business Systems Analyst

January 2022 – August 2022

#### **Telemedicine System along with Integration and Workflow Management System**

Developed and implemented a **Telemedicine System** through a **telehealth platform leveraging AWS technologies** for Providence St. Joseph Health, aimed at providing **virtual consultations** with healthcare professionals to patients in remote and underserved communities. The project was successful to **improve accessibility by 80%, reduce healthcare costs by 60%-80%, and enhance patient satisfaction by 85%** while adhering to **strict security and compliance standards**.

#### **Responsibilities:**

- Evaluated the quality of care provided by the telehealth platform using relevant **telehealth-focused metrics and KPIs** in accordance with healthcare industry standards **HIPAA, HL7, FCA, HIE, PHI, ICD, FHIR, HEDIS, ISO, and GDPR**.
- Conducted **interviews and workshops** with **SMEs and stakeholders** to gather **functional and non-functional**, along with the **GUI & Data requirements** for enhancing the telehealth platform's **virtual care services and user experience**.
- Analyzed the **As-Is system** by performing **Document Analysis & System Analysis** for efficiency & comprehended the business workflow. Collaborated closely with **cross-functional teams** to gather requirements and design the **TO-BE process**.
- Analyzed the **technical & business risks** and collaborated with **developers & data engineers** to create **mitigation strategies**.
- Created multifarious **UML diagrams like Use Case diagrams, Activity diagrams, and Sequence diagrams** using **Lucid Chart** for the Business process modules to **stakeholders and team members** for better understanding and representation.
- Developed **Data Flow, Business Process Model Diagrams** to capture and illustrate the **business process workflow**.
- Collaborated closely with the **Product Owner** to effectively merge **Product Vision Meetings, Backlog Grooming, Sprint Planning, Daily Scrum, Sprint Review, and Sprint Retrospective** ensuring all Agile methodologies were followed meticulously.
- Utilized **JIRA** to create **User Stories** that comply with the **INVEST criteria**, and meticulously defined **Acceptance Criteria** for each User Story. Worked in close collaboration with the team to establish clear requirements for the **Definition of Ready and Definition of Done** and provided valuable assistance to the Scrum Master in facilitating **slicing, prioritization, and estimation techniques** for User Stories such as **Vertical slicing, MosCow Technique and Planning Poker**, respectively.
- Conducted comprehensive **analysis** to identify and extract clinical data from various types of **Relational Databases (RDBs)**, and skillfully ingested this data into the target **Operational Data Store** with the assistance of data analyst with **AWS environment**.
- Assisted Data Engineers in handling different **Metadata Management** policies & applying those regulations to data.
- Analyzed **APIs and microservices** which allow external systems to interact with the platform, captured all relevant data in the **AWS S3** using **AWS Glue**, and **continuous monitoring of data model** using **AWS Cloud watch** to ensure system performance.
- Developed **high-level architectural plans** that outline the overall structure, components, and relationships to how the telehealth platform will connect and integrate seamlessly with the existing healthcare system securely and efficiently, utilizing **Amazon API Gateway, AWS Lambda, Amazon Kinesis, and Amazon S3** to facilitate **secure and efficient data exchange**.
- Utilized **SQL queries** to manage and query the **relational databases** to verify patient details and records associated with the virtual appointment scheduling and telehealth consultation processes. Employed **SQL query** for conducting **data scope assessment and performing data analysis** related to telehealth platform usage and **patient engagement metrics. In SQL 2.1.2 environment**.
- Produced accurate and comprehensive **REST API documentation** using **Swagger** and performed functional API testing using **Postman**, to verify the data response format in **XML or JSON**, in accordance with system requirements.
- Reviewed and provided assistance on the **Test plan, Test cases, and Test scenarios, for integration testing, regression testing, Failover, Recovery testing, Smoke Testing, Security testing, and User Acceptance Testing (UAT)** and documented feedback.

- Collaborated with the Business Intelligence team to design and create customized **interactive reports** like **dashboards and graphs** using **Tableau** to provide visual insights into **patterns, frequency, and variations of different health data**.
- Facilitated **communication/Collaboration** with stakeholders and ensured the project was delivered **on time** and within **budget**.

**Environment:** Scrum, JIRA 7.4.5, Confluence 6.5, Zephyr, Windows 10, JAVA SE 9, Java Web Logic Server, HTML, XML, DHTML, Beamstalk, Lucid Chart, Spark SQL 2.1.2, MS-Office 2016, POSTMAN, SWAGGER, AWS Cognito, AWS Cloudfront, AWS Amplify, AWS Quicksight, AWS lambda, AWS Elastic AWS S3, AWS Glue, AWS Security Hub, AWS Cloudwatch, Amazon Kinesis

Molina Healthcare - Long beach, California  
Lead Business Systems Analyst

September 2019 – August 2021

### Claims Processing System

Implementation **Claims Processing Automation Software**, which was able to read the text from **EOBs, CMS 1500 (formerly HCFA 1500), and UB-04 (formerly UB-92)** documents, that upload the information directly to the claims processing system. This greatly **reduces** the expensive **data entry costs** incurred by organizations that process these forms. These systems use **Optical Character Recognition (OCR)** to recognize machine-printed data from scanned images, as well as **Intelligent Character Recognition (ICR)** that can read hand-printed data. The success parameter was a **decrease in time and data entry cost by 85%**

### Responsibilities:

- Analyzed the incoming flow of **X12 EDI 835 (Health Care Claim Payment & Remittance), and X12 EDI 837 (Health Care Claim) transactions** through **Apache Kafka** pipelines and monitored the working of the **EDI parser** which **parses the claims**.
- Facilitated interviews with **SMEs** for comprehending requirements for enhancement of the claims process using the **FACETS**.
- Conducted a comprehensive **System Analysis** by utilizing industry-standard methodologies to discern the current **AS-IS** process.
- Collaborated closely with **cross-functional teams** to gather requirements and design the **TO-BE** process, leveraging the **Business Process Modeling tool, Microsoft Power Automate** to build automated workflows for various processes which was repetitive.
- Designed and created **Use Case Documents, high-fidelity, and low-fidelity mockups, and wireframes**, and using tools such as **Microsoft Visio** for the **Development and Testing teams** to track the business scenarios which was also part of **DORs** for the issue.
- Collaborated with **developers** to **design** and develop the **Conceptual and Logical Models** for the system, which included identifying **entities and their attributes**, as well as **defining relationships** between them using **Entity-Relationship Diagrams (E- R)**. Utilized **MS Visio** to create and maintain the **E-R diagrams**, ensuring alignment with the business requirements.
- Facilitated **User Story Writing sessions** and determined **Acceptance Criteria** for various requirements during **PI Planning**.
- Participated in **ART (Agile Release Train)** ceremonies and bridged the communication between **business and development team**.
- Collaborated with the **Product Owner** to maintain the **Program Backlog**, which included managing **cross-team dependencies** within the **Agile Release Train (ART)**. This involved identifying and managing **inter-team dependencies**, updating the **Program Backlog** regularly, provided support to the **Product Owner** to ensure that the **Backlog was in line** with the **ART's strategic goals**.
- Collaborated with the **Product Owner** to apply **vertical slicing technique** in **decomposing features** into smaller, independent user stories. Utilized **Azure DevOps** practices to facilitate the creation and maintenance of **user stories**, as the **Program Backlog**.
- Assisted the **Scrum Master** in conducting **ART ceremonies** such as **PI Planning, System Demo, and Inspect and Adapt workshops**, and assisted in **creating sprint reports** such as **Burndown/Burnup Charts and information radiators**.
- Created **REST API documentation** using **JSON format and Azure API Management**. Converted the documentation to the **OpenAPI specification (Swagger)** format. Executed end-to-end testing of **CRUD (Create, Read, Update, Delete)** operations to validate expected functionality. **Conducted testing** in production and development environments to identify environment-**specific discrepancies**. Verified **API response time and error codes** met performance standards and provided meaningful error messages.
- Created **SQL queries** using **joins, unions, group, order by, and aggregate functions** to **extract data** from **Azure SQL Database**. Reviewed existing **Stored Procedures** and tuned **SQL queries** for better performance to support application developers.
- Utilized **ETL process for source exploration** using **Azure Data Factory (ADF)** for **mapping data** from different sources to the target and created a **Data Mapping document** for the application after finalizing the **attributes and tables** with business users.
- Worked with **Development QA, and Production Support teams** to communicate, verify and **test the desired functionality**, and assisted the **Testing team in creating Test Plans, Test Scripts, Test Cases, and Test Reports** and documented all test results.

**Environment:** Scaled Agile Framework (SAFe) 4.0, JIRA 7.4.5, Confluence 6.5, Zephyr, Windows 10, Azure API, Azure Data Factory, Azure DevOps, Azure SQL Database, Apache Spark 2.4, Lucid Chart, Spark SQL 2.1.2, MS-Office 2016, POSTMAN, SWAGGER, Apache Kafka 1.0.1, FACETS, Zeppelin, Spark Shell, Tableau

Fresenius Medical Care – Waltham, Massachusetts  
Sr. Business Systems Analyst

April 2018 – September 2019

### ERP Systems along with Medical Billing and Revenue Cycle Management System

Leading **renal dialysis service provider** Fresenius Medical Care. wanted to **reduce operating and maintenance expenses** as part of their company development, so they moved their **on-premises ERP to the cloud**. The project involved **optimizing version control**,

**lowering maintenance costs**, and growing the program as needed. As a result of the project's successful completion with a **25% reduction in maintenance cost**, setting it up for future development and success in the healthcare sector.

**Responsibilities:**

- Facilitated **Joint Application Development (JAD)**, **Brainstorming** sessions with **stakeholders**, **SMEs**, and the **IT team** to elicit requirements as accurately as possible. Additionally, used **Document Analysis** to analyze the existing system.
- Performed **GAP Analysis**, and **Fishbone Analysis** with **Solution Architects** which include capabilities, requirements & needs against system technology. Assessed various **technical complexities** that could affect **business functionalities**.
- Performed **source system exploration**, and **target system** and assessed the **size and type** of **data** that needs to be **migrated**.
- Partnered with **key decision makers** and **stakeholders** of the finance department to explain the benefits of migrating to the cloud using **AWS Technologies** and conducted a **cost-benefit analysis** to inform the right level of services required that meet the needs.
- As a part of the project management process, I developed an **Application Dependency Mapping Document** to provide a comprehensive understanding of the relationships between different components of business services and applications.
- Performed thorough **Risk Analysis** and **Risk management** of the project and produced **Backup Recovery Solutions** with **DevOps** and **cloud engineers** to make sure that there is **no application downtime** throughout the **migration process** and **documented it**.
- Assisted **DevOps Engineers** to develop the **Product Process Design** and **Continuous Product Delivery** strategies.
- Used **AWS Cloud Adoption Readiness Tool** to assess the readiness of the organization for **successful cloud migration**.
- Assisted cloud team in implementing **instances** on **Amazon EC2** and various **AWS Services** like **S3 through HTTP protocol**, **Cloud Trail**, **Cloud Front**, **WAF**, **Elastic Load Balancers**, and **Lambda** to ensure data pipeline is precisely defined.
- Assisted in the testing using **Rest API** involved within various **AWS Services** and documented them using **SWAGGER**.
- Conducted comprehensive data validation by assessing various metrics, **viewing logs**, and running complex **SQL queries** like **Joins**, **Union**, **Sum**, and **Max**. Utilized advanced **SQL techniques** like **a window**, **Indexing strategies**, and **recursive** to ensure referential integrity and maintain consistency within multiple data tables, employing a variety of **SQL Constraints** as needed.
- Ensured that **ERP** is working in sync with the on-premises **Laboratory Information Management System (LIMS)**
- Collaborated in migration with **stakeholders**, and **system architects** for customized **reports** and **dashboards** using **Tableau**.

**Environment:** Scrum, SWAGGER, AWS Cloud Adoption Readiness Tool, AppDynamics, Oracle Database 11g, Tableau, SharePoint, Amazon Web Services Products EC2, S3, Cloud Trail, Cloud Front, Elastic Load Balancer WAF, Lambda, MS-Office 2013, Windows 7, MS-Project 2016

Fortis Healthcare – Pune, India  
Business Systems Analyst

April 2017 – March 2018

**Enhancement of Medical billing and Revenue Cycle Management System and Data Integration and Workflow Management System**

The project is for one of the **nation's fastest-growing hospital systems**, which offers both primary and tertiary healthcare services. To make it simpler for staff members to **submit expenditure reports for reimbursements**, a financial application had to be redefined and rebuilt. This involved obtaining and capturing user requirements, examining the current system, **identifying gaps**, and developing the target system.

**Responsibilities:**

- Conducted comprehensive **requirements analysis** and **impact analysis** to accurately capture and document Business requirements in **Business Requirements Document (BRD)**, **Functional Specification Document (FSD)**, **FRD**, and **SYS**.
- Conducted extensive **GAP Analysis**, **Fishbone Analysis**, **document analysis** and facilitated highly effective **Joint Application Development (JAD)** sessions and **requirement workshops** to expertly elicit requirements from business stakeholders.
- Developed a comprehensive **Requirement Traceability Matrix (RTM)** that maps and traces requirements with test cases helping in defining **Entry** and **Exit Criteria** to ensure all requirements are **captured**, **tracked**, and met throughout the **project lifecycle**.
- Proficient in **SQL** with experience in creating complex queries using keywords such as **JOIN**, **GROUP BY**, **HAVING**, **UNION**, along with aggregate functions and **subqueries** to **retrieve**, **manipulate**, and **analyze large datasets from relational databases**.
- Created **Reports and Dashboards** in **Tableau** to present system performance and status to stakeholders in a meaningful way.
- Created, documented, and maintained functional **test cases** and other artifacts such as **test data**, **data validation**, **harness scripts**, and **automated scripts** using **HP QC**. Assisted in **Defect Life Cycle Management** and creating **Issue logs**.

**Environment:** Waterfall-Scrum Hybrid model, MS Visio, MS Office, MS Access, Hp QC, Tableau, Prezi

Max Bupa Health Insurance – Pune, India  
Associate Business Analyst

March 2016 – February 2017

**Policy Administration and Customer Relationship Management (CRM) System**

Max Bupa Health Insurance realized the need to **create and execute a digital solution** to improve the **customer experience** and raise **customer engagement**. The task was to develop a **user-friendly mobile application** and **online portal** that would make it simple for users to **buy and manage their health insurance plans**, access a variety of health and wellness resources, and get specialized

support and help. If this project were to be implemented successfully, it would **raise the company's operational performance and cost-effectiveness** while also increasing customer happiness and retention. After this product was released, it **increased company sales by 45%**

**Responsibilities:**

- Conducted **Interviews and Brainstorming** with Business owners, Stakeholders, and SMEs to understand project scope, business process workflows, and **Requirements workshops** for **functional, non-functional requirements, Data, and GUI requirements**.
- Assisted **Project Manager** in creating **Project Charter, Work Breakdown Structure, and Critical Path Analysis**
- Developed **Business Requirement Document (BRD), Functional Specifications Document (FSD), and System Requirement Specification (SRS), Project Charter** and conducted **Feasibility Analysis, Cost- Benefit Analysis, and Impact analysis**.
- Developed various **UML diagrams** like **Activity diagrams, Use Case diagrams, and Sequence diagrams** using **MS Visio**.
- Developed and managed, project tasks utilizing **MS Project as a Project Management Software**, enabling **developers and testers** to effectively **comprehend and implement project requirements**. Continuous communication with the **project manager, developers, and testers** to make sure the requirements are clear and well-understood by team. Handled the **Change Management process (CMP)** and had a **Risk Management Framework** in place and convinced the **Change Control Board (CCB)**.
- Reviewed **Test plans, Test scenarios, Test cases, and also Traceability matrix** to ensure the functionality of software meets the requirements of the stakeholder, performed defect management and defect tracking through the **HP ALM** tool.
- Conducted comprehensive **regression testing** to validate **system functionality** and ensure its **quality and compatibility** and seamless **integration** with existing **features** without causing disruptions or issues, **mitigating the risk** of potential defects.

**Environment:** Waterfall, Native Script, JavaScript ES6, Deployd, Redux Architecture, Appium, HP ALM, Rally, MS Office Suite 2013, MS-Visio-2013

**PolicyBazaar – Mumbai, India  
Developer**

**July 2015 – December 2015**

PolicyBazaar aimed to provide **affordable and comprehensive health insurance coverage** for individuals and families in India, amidst **rising healthcare costs and a confusing insurance market**. The challenge was to develop and launch a **user-friendly online portal** with **personalized coverage options** and strong partnerships with healthcare providers. With the **success** of this project, customers were able to get **customized plans** at a better price and **increased sales by 65%**

**Responsibilities:**

- Created **administrator accounts** using **Java-based frameworks (Spring Boot)** to enable customers to access the **online portal**, facilitating **web-based insurance plan comparison and purchasing**.
- Designed **databases** with multiple tables to store customer information, insurance plan details, healthcare provider data, and transaction records. Developed the **front-end User Interface** of the online portal using **Java-based technologies (Java-Server Faces)**, including the insurance plan, comparison page, and contact page featured with an integrated visual dashboard displaying **personalized policy recommendations** for users enhancing their experience, resulting in an improved and **user-friendly** interface.
- Extracted raw unprocessed data from **customer information reports** which contains various customer information and built a **database using Java-based frameworks (Spring MVC)**, enabling administrators to view customer profiles on the portal.
- Implemented a **database** and defined related **queries and stored procedures**, allowing the analysis of customer preferences and behavior to **provide personalized insurance plan recommendations**. Utilized **SQL queries like Aggregate functions to validate data at the back end**, ensuring that all related data was loaded into the **appropriate tables and maintaining data integrity**.
- Created **stored procedure** calls for **data validation and control mechanisms**, ensuring **data consistency and accuracy** throughout the portal. Designed and executed **SQL queries** using **DDL/DML** commands such as **SELECT, JOIN, UNION, OUTER JOIN, GROUP BY**, and **aggregate functions** to **extract data from the database (MySQL)** for timely **reporting and validation**.

**Environment:** Waterfall, HTML 5, CSS 3, .NET 4.5.1, Microsoft Visual Studio 2013 Microsoft SQL Server 2012, Windows 7, Rational ClearQuest, MS Office, MS-Project 2010, MS Visio 2010, SharePoint

**Education:**

Bachelor of Technology in Electronics and Communication Engineering – SRM University, Chennai
