

Prem Gandhi

Houston, TX

premgandhihct6z_au8@indeedemail.com

+1302-966-5580

Knowledge of various regulatory acts such as the Bank Secrecy Act, Dodd-Frank Act, and compliances such as Anti Money Laundering (AML), Know your Customer (KYC), Customer Due Diligence (CDD), Financial Action Task Force (FATF), Mortgage, collateral management, National Automated Clearing House Association (NACHA), ACH.

- Developed knowledge in Payments Processing, Transaction Management, Risk Management, and Compliance.
- Involved in the various phases of Waterfall, Agile Scrum, Kanban, Scrum-Waterfall Hybrid, and SAFe environments.
- Experience in GAP Analysis, Risk Analysis, Impact Analysis, SWOT Analysis, and Cost-Benefit Analysis.
- Successfully gathered SMART (Specific, Measurable, Attainable, Realistic, and Timely) requirements and collaboratively transformed them into Business Requirements Document (BRD), Use-Case Specifications, Functional Requirements Document (FRD), Functional Specifications Document (FSD), System Requirements Specifications (SRS), Requirements Traceability Matrix (RTM), Risk Register, RACI matrix, Data Flow models, and change request document.
- Proficient in networking with individuals at various levels and facilitating requirements elicitation techniques such as questionnaires, interviews, brainstorming, focus groups, requirement workshops, document analysis, and JAD sessions.
- Have experience creating Low and High Fidelity Mockups and Wireframes and collaborating with the UI/UX teams.
- Well-versed in creating BPMNs & Activity, Use-Case, Sequence, and other UML Diagrams on MS Visio and Lucidchart.
- Experience in Business Process Re-Engineering, Business Process Flow improvements while tracking the KPIs frequently.
- Participated extensively in scrum ceremonies and facilitated backlog grooming, release planning, sprint planning, daily standups, sprint review, and retrospective meetings where I ensured smooth progress and resolved impediments as an SM.
- Assisted the Product Owner in coming up with the Project Vision and carried out Market Research and Feasibility Analysis.
- Assisted the product owner in defining the Minimum Viable Product (MVP), Minimum Releasable Feature (MRF), Minimum Marketable Feature (MMF), and defining the Key Performance Indicators (KPI) during the initial phases.
- Facilitated Release Planning sessions for the product, and assisted all the teams in writing business epics. Helped in the sizing and estimation and prioritization of epics by helping SMEs perform SWAG (Scientific Wild Ass Guess) Analysis.
- Assisted product owner with the Definition of Ready (DoR) and Definition of Done (DoD) for Product backlog items.
- Took the lead multiple times in the breaking down of Epics into User Stories (INVEST format) and then helped in prioritizing user stories using various prioritization techniques such as MoSCoW, Value Stream Mapping, and Kano Scoring Model.

- Expertise in facilitating workshops for the Estimation of Backlog Items using techniques like Planning Poker, T-Shirt Sizing, Bucket System, Affinity Mapping, and Relative Mass Valuation, and referencing past stories using Triangulation if needed.
 - Managed Requirement Churn to gather only essential requirements and to minimize the influence on current/next sprints.
 - Aligned with the values of SAFe with regard to Alignment, Built-in-Quality, Transparency, and Program Execution.
 - Have collaborated with individuals and teams at ART as well as Portfolio levels with regard to Business, Product. Management, Hardware and Software, Compliance, QA & Testing, Operations, and Security to get items to "Done". They were System Architects, Release Train Engineers, Business Owners, Customers, Systems Teams, and Shared Services.
 - Have experience working on Epics, Capabilities, Features, and Enabler Stories and breaking them down into sizeable Tasks.
 - Have participated in SAFe ceremonies including PI Planning, Scrum of Scrums, Innovation & Planning, and System Demo.
 - Well-versed with the Continuous Delivery Pipeline (CDP) and its elements as well as Value Streams at the Portfolio level.
 - Well-versed in Data Warehousing, Data Mapping, Data Profiling, and Data Migration concepts. Analyzed the Conceptual, Logical, and Physical Data Models and created Entity Relationship diagrams (ER Diagrams) to define relationships.
 - Identified sources and target databases in the data migration process and assisted in different levels of the system integration process. Wrote the transformation rules and logic for the migration and maintained the data mapping specification document and data mapping document, performed data cleansing and data manipulation on the selected source data.
 - Facilitated ETL/ELTs using Informatica. Managed ETL testing, data profiling, and transformation testing in databases.
 - Involved in API Mapping, API Testing, and API Documenting while checking the data structures and format, upstream and downstream, KPIs, API Endpoint interactions (POST, GET, PUT, DELETE), and Authentication & Authorization.
-
- Hands-on experience in writing and executing SQL queries using Data Definition Language (DDL), Data Manipulation Language (DML), DQL, and DCL statements to perform CRUD operations on database and experience in executing queries like Joins, Subqueries, and Aggregate functions. Good understanding of all Procedures, Functions, and Triggers.
 - Have been involved in Cloud projects and have exposure to AWS products such as AmazonRDS, Amazon EC2, Amazon S3 Bucket/S3 Bucket Glacier, AmazonECR, AmazonSQS, AmazonHSM, Azure QnA Maker, and Azure Data Factory.
 - Experience in creating and maintaining Test Plans, Test Scripts, Test Scenarios, Test Cases, Requirements Traceability Matrix (RTM), and User Acceptance Testing (UAT) and Assisted testers in Functional testing and Performance testing.
 - Have experience with generating BI Reports and Visualizations for further analysis using Tableau and Power BI.
 - Self-driven individual who possesses an analytical mindset, with problem-solving skills, and is capable of forming and maintaining positive and productive working relationships in internal, external, independent, and team environments.

Work Experience

Sr. Business Analyst

BBVA USA Bancshares, Inc - Houston, TX

February 2022 to Present

The scope of the project was to enable near-field communication (NFC) payments or contactless payments made by placing a mobile phone near a payment terminal, in its mobile banking app. To facilitate compliance with global requirements, reduce the scope of certification and audits, and ensure minimal utilization of time and budget, we chose to build the NFC feature on Amazon Web Services (AWS).

Responsibilities:

- Developed knowledge in Payments Processing, Transaction Management, Payments Security, and Encryption.
- Analyzed the AS-IS and TO-BE processes and conducted GAP Analysis to understand the key findings.
- Elicited and documented requirements using techniques like Document Analysis, Benchmarking, Focus Groups, SWOT Analysis, JAD Sessions, Questionnaires, and Interviews and ensured that they met the triple constraints of the project.
- Helped the Product Owner break EPICS into User Stories using INVEST and the SMART technique to help the Scrum Development Team to break User stories into Sprint Tasks and ensure the progress of these sprint tasks.
- Conducted business process modeling and analysis, identified, assessed, and articulated operational risks.
- Created UML Diagrams like Use Cases, Activity, and Sequence Diagrams using MS Visio to understand the process flows and constantly assisted the UI Team in creating mockup screens, and wireframes to portray the PSPI using MS Visio.
- Created and discussed the Schema Design for Amazon RDS and ensured PCI DSS standards were met using AmazonHSM.
- Used Amazon ECR's Container Image Management to store and manage the various container images for the application.
- Used Amazon SQS to manage the messaging between the various application components, balance loads, and handle errors.
- Maintained Cloudwatch Logs to store, manage, & monitor log files regarding Customer App Registration and Verification.
- Involved in Container Orchestration, Autoscaling, and Integration with other AWS Services using the AmazonEKS tool.
- Used Amazon S3 Bucket to store frequently retrievable data and AWS S3 Bucket Glacier for archiving data.
- Documented REST APIs written in JSON format and kept track of the upstream/downstream data, endpoints, data structures, and formats, authentication & authorization and the subsequent keys and tokenization, error handling capability, the status responses that are generated, and performance KPIs such as response time and throughput.
- Wrote SQL queries using functions like set, where select, joins, unions, outer/left/right joins, group by, order by, and aggregate functions to extract data for timely reporting, analysis, and validation and created stored procedures.
- Collaborated with the Quality Assurance team to design and develop Test Strategy, Test Plans, Test Scenarios, and Test Cases for performing Functional Testing, and Regression Testing and reviewed Test Results for providing sign-off.

- Involved in User Acceptance Testing scenario drafting, providing support to the business during UAT Testing.
- Identified and Modified Defects, Issues, and Priorities using JIRA and captured them into a tracking log.
- Documented User Manual, Training Release Notes & Lessons Learnt documents to capture key learnings and takeaways, KT documents consisting of the best practices, and stored and communicated them with my team members on SharePoint.
- Used Amazon Quick Sight Data Visualization and exploration capabilities to perform analysis and Generate Reports.

Environment: Scrum, Office 365(Word, Excel, PowerPoint, Outlook), MS Visio, AmazonHSM, AmazonECR, AmazonSQS, Amazon CloudWatch Logs, Amazon EKS, AmazonRDS, Swagger, MS SQL, HP ALM, Jira, SharePoint, AWS Quick Sight.

Sr. Business Analyst/Scrum Master

Chime Financial, Inc - San Francisco, CA

July 2020 to January 2022

We wanted to remove scale-related downtime, increase its flexibility, and find a solution that would keep our company's services running for its members. We needed to scale our 5 TB database, which was at the limit of our previous host's largest hardware solution, as well as its firewall and load balancers. By migrating to Amazon Web Services (AWS), we scaled our services without transitional downtime and removed capacity issues.

Responsibilities:

- Worked with various financial metrics such as APY, Overdrafts, Customer Lifetime Value, Assets, Capital, and ROI.
- Performed System Analysis to understand the AS-IS process and collaborated with the team to design the TO-BE process based on the requirements gathered and designed the TO-BE process using the Business Process Modeling tool MS Visio.
- Performed GAP analysis and Cost-Benefit analysis to establish the significance of the enhancement for the project.
- Worked with Subject Matter Experts to capture and understand high-level business requirements to then slice further.
- Reviewed high-level requirements with the business and assisted the PO in prioritizing and defining the Project scope.
- Created a Use Case Document for the Development and Testing teams to track the activities with the business scenarios.
- Collaborated with Design team to develop various kinds of high-fidelity and low-fidelity wireframes using the MS Visio tool.
- Worked on Amazon Redshift to collaboratively store and analyze large amounts of migrated data and generate insights.
- Assisted in using Amazon EC2 to test the migrated application and run the systems in the production environment.
- Assisted in using AWS SQS to decouple migration workloads, Control workload rate, and monitor queue activity.
- Facilitated the scrum ceremonies like Daily Stand-up Meetings, Sprint Planning, Sprint Review, and Sprint Retrospective and updated the Burn-Down Chart, and tracked the team's progress regarding project objectives, deadlines, and tasks.

- Conducted User Story Writing sessions and determined Acceptance Criteria for Potentially Shippable Product Increment.
- As a Scrum Master ensured that the dependencies were met and that impediments were fixed and conflicts were resolved.
- Hands-on Experience with JIRA for drafting the User Stories and assisting the PO in maintaining the product backlog.
- Helped PO to Prioritize the PBIs using the MoSCoW and T-Shirt Sizing approach considering the dependencies.
- Vertical slicing of epics to user stories with acceptance criteria defined while collaborating with a cross-functional team.
- Helped the scrum team in estimating story points using planning poker to prepare PBIs for developing Sprint tasks & conducted Triangulation when necessary while taking suggestions from the cross-functional development team.
- Collaborated with the Product Owner during the Sprint Review Meeting for presenting the Potential Shippable Product Increment to the stakeholders and helped decide which features satisfy the Acceptance Criteria and Definition of Done.
- Conducted Sprint Retrospective Sessions to gather inputs from team members to improve team efficiency and resolved team issues regarding communication and decision-making using techniques such as Silent Writing and Mad/Sad/Glad.
- Assisted in Designing Conceptual and Logical Models to capture the entities existing in the system and the relationship between them using Entity-Relationship Diagrams (E-R), keeping in mind the business requirements using MS Visio.
- Utilized ETL Process for mapping data from different sources to the target thereby reporting and analyzing metrics.
- Created the Dimensional Model and helped the architect to select from various dimensions and converted them to user stories.
- Created a Data Mapping document for the application after finalizing the attributes and tables with business users.
- Documented the API specifications such as the input and output parameters, the upstream and downstream of data, the data structures, and security parameters on Postman after ensuring the scope of the API and the requirement that it meets.
- Developed SQL queries using joins, unions, group by, order by, and aggregate functions to extract data to manipulate and calculate information to fulfill data and reporting needs and identified tables from which data is being extracted.
- Reviewed existing Stored procedures, and supported application developers by tuning SQL queries for better performance.
- Worked with Development, QA, and Production Support teams to communicate, verify, and test the desired functionality.
- Assisted the Testing team in creating and documenting Test Plans, Test Scenarios, and Test Cases and collected Test Data for successful completion of Integration Testing and Functional Testing, captured and documented the various test results.
- Assisted in Manual testing, Integration testing, Smoke testing, Sanity testing, System testing, and Regression testing, and conducted User Acceptance Testing with UAT test cases and resolved issues pointed out by the end-users.
- Generated Business Intelligence report for senior management for decision-making using the Tableau reporting tool.

Environment: SAFe, MS Office (MS Word, MS Excel, and MS PowerPoint), MS Visio 2019, UML, Amazon Redshift, Amazon EC2, AWS SQS, S3, Informatica PowerCenter, Postman, MySQL server, HP ALM, JIRA v7.13, Confluence, Tableau 2020.2

Sr. Business Analyst

National Financial Partners (NFP Corp) - Austin, TX

December 2018 to June 2020

NFP is a leading independent distributor of financial services products including employee benefits, property and casualty insurance, and retirement benefits. The goal of the project was to improve the existing platform by incorporating a series of new features including a chatbot, customized dashboard, automated compliance analytics, and reporting. The enhanced system provides an improved view of clients' assets, experience, and performance. Also, the new chatbot functionality provides a faster and smarter way of answering frequently asked questions about data and services.

Responsibilities:

- Developed knowledge of insurance metrics such as Premiums, ROE, Loss Adjustment Expense (LAE), and Ratios.
- Evaluated the As-Is process of the current dashboard and conducted Gap Analysis to identify improvements offered by the To-Be system by setting up a new consolidated dashboard that facilitated ease of use for different clients and stakeholders.
- Collaborated with a multitude of stakeholders and functional teams. Partnered with technology partners, enterprise architecture groups, process and change coordinators, and business leaders to ensure all parties were on board with the project objectives.
- Wrote technical specifications to maintain system diagrams, system interface charts, and supporting documentation.
- Facilitated JAD sessions with the business stakeholders, and engineers to understand the Dashboard requirements (Charts, KPIs, filters, drill-downs) & ensured that the Dashboard would meet the needs of the stakeholders while being feasible.
- Utilized MS Visio to design Dashboard wireframes, Process Flow Diagrams, Business Process Models, Feature Mind Maps, UML Use cases, Sequence, and Activity diagrams and collaborated effectively with BI developers for feedback and approval.
- Actively participated in various scrum ceremonies together with the PO and SM and facilitated as well as participated in the Backlog Grooming, Sprint Planning, Daily Standups, Sprint Review, and Sprint Retrospective meetings.
- Collaborated with the PO and Development Team in planning and prioritizing and estimating the product backlog.
- Worked with the development team in defining the Definition of Done and Acceptance Criteria for PSPI.
- Made sure the User Stories I wrote passed the INVEST (Independent, Negotiable, Valuable, Estimable, and Small) criteria.
- Executed SQL queries for extracting data, exploratory analysis, research analysis, and ad-hoc reporting using SSRS.
- Involved in data cleaning and conducted data modeling using Informatica, and analyzed the relevant KPIs.
- Created Source to Target (STM) mappings in Data Mapping Document for building ETL pipeline in Azure Data Factory.
- Worked with ETL developers to construct ETL Pipeline to integrate data from disparate sources (SQL Server, MySQL, Oracle, FTP, etc.) into a custom-built model in Azure Data Factory and ensured the pipeline met the data integration standards.

- Extracted question-answer pairs from semi-structured content, including FAQ pages, support websites, excel files, SharePoint documents, product manuals, and policies and automated the process on Azure QnA Maker's built-in connectors
- Worked on Enterprise DB Management Platforms by creating Interface Catalogues, Business Rules, and Mapping Sheets.
- Collaborated with the UI team to create HTML, and CSS templates for integrating the dashboard and chatbot into existing UI.
- Assisted the testing team in automating API testing. Assisted the API team in describing the structure of RESTful APIs.
- Worked with various SQL Operations such as Select, Where, From, Union, Union all, Inner/Outer/Left/Right Joins, etc.
- Lead the efforts of deciding Test Strategy, Requirement Traceability Matrices, Test Plans, Test Cases, and Test Scenarios to guarantee that test cases reflect client needs for the utilitarian, execution, convenience, and security prerequisites.
- Conducted A/B testing to analyze the performance of the chatbot, and suggested improvements based on statistical inference.
- Used JIRA to keep track of bugs and defects, maintain issue logs, and handle change requests efficiently.
- Used Power BI to generate reports such as Conversation Metrics, User Demographics, Chatbot Performance & User Feedback to provide and gather Business Intelligence insights and make certain necessary changes accordingly.

Environment: Scrum, MS Visio, MS Office (Excel, Word, PowerPoint, Outlook), Azure QnA Maker, Azure Data Factory, Azure bot services, Swagger, REST, MySQL, JIRA v8.5.x, Power BI.

Business Analyst

IDFC Asset Management - Bengaluru, Karnataka
August 2016 to July 2018

To ensure timely availability of information, the organization's trade management system needed to be accessible to its customers anywhere in the world throughout the day basis to support multiple business areas including Asset Management, Portfolio Management, and Risk Management.

Responsibilities:

- Worked on key Trade Lifecycle metrics such as execution time, settlement time, error rate, volume, and profitability.
- Developed knowledge of concepts with regard to Capital Markets such as Market Liquidity and Volatility, Risk Management, Investment Management, Asset Classes, Market Infrastructure, and Regulatory Compliances.
- Considered Option Greek insights regarding Pricing Models, Implied Volatility, Trading Strategies, and Market Data.
- Performed Requirements Workshop, and Document Analysis to elicit multifarious requirements.
- Performed Card Sorting to understand the view of customers regarding the User Interface (UI).
- Developed the Business Requirement Document (BRD), Functional Specifications Document (FSD), and System Requirements Specification (SRS) document based on the output of the Requirement Elicitation sessions.
- Designed various UML diagrams such as Use case, Activity, and Sequential diagrams using MS Visio.
- Handled the Change Management process and convinced the Change Control Board (CCB) for approval of the change, conducted business and technical impact analysis, and rebase lined the artifacts accordingly as elaborated by stakeholders.

- Conducted User Acceptance Testing (UAT) and addressed concerns of users and discussed with the Developer.
- Maintained continuous communication with the development team and the test team to ensure that the modifications which are initiated were in alignment with the requirements and relevant feedback is gathered and appropriate changes are made.
- Assisted the Operation and Maintenance team in documenting the Standard Operation Procedures.
- Used MS-Project for keeping track of various tasks and used SharePoint for document management.
- Utilized Crystal Report, a BI reporting tool to generate insights with regard to the performance of the trade management system.

Environment: Waterfall, MS Office, MS Visio, MS Project, Crystal Report, SharePoint.

Jr. Business Analyst

HDFC Bank - Bengaluru, Karnataka

December 2014 to May 2016

The scope of the project was to enhance the electronic clearing services (ECS) of HDFC bank to a new powerful same-day ECS transaction processing. In accordance with the National payments corporation of India's National automated clearing house (NACH), batch files would be processed on the same day with two new clearing windows.

Responsibilities:

- Developed knowledge in Payments Processing, Customer Experience, Fraud Prevention, and Regulatory Compliance.
- As a Business Analyst, I assisted Business System Analyst in eliciting requirements using Document Analysis, JAD sessions, Survey/Questionnaire, Interview sessions, Brainstorming, Focus Groups, and Whiteboard Sessions and analyzed the feasibility of the requirements and formulated and conducted GAP Analysis to derive requirements for ECS processing.
- Was a part of Cost Benefit Analysis, Feasibility check, Impact analysis, and Risk Analysis to understand the triple constraints.
- Assisted in creating a Business requirement document to outline the high-level objectives, system requirement specification explaining the functional, non-functional, and UI Requirements, and functional requirement specification document.
- Created Mock-Up Screens and Wireframes using User Interface components for client verification on MS Visio.
- Adopted Entity-relationship modeling technique and developed Conceptual and Logical data model for DFI tables.
- Worked on SQL queries such as table creation and adding items to it, select queries, group/order by, joins, and unions.
- Assisted the testing team to develop a test plan, test case, test data, and test scenarios to run them on HP ALM.
- Collaborated with Stakeholders to accomplish UAT Tests, documented feedback, and planned necessary changes.

Environment: Waterfall, MS Visio, MS SQL Server, HP ALM, MS Project, SharePoint

Education

Bachelor of Commerce in Finance & Accounting

Christ University - Bengaluru, Karnataka

Skills

- SDLC Methodologies Waterfall, Agile Scrum, Hybrid (Waterfall Scrum)
- SAFe
- Kanban
- XP. Modeling Tools MS Visio
- Lucidchart
- Balsamiq
- Figma Budgeting
- Cost-Benefit Analysis
- Impact Analysis
- Risk Analysis
- ROI Analysis
- SWOT Analysis
- Requirements Elicitation
- Business Process Mapping
- Change Management
- Financial Reporting
- and Valuation & Pricing Requirement Management JIRA
- Confluence
- SharePoint Testing Tools HP QC/ALM
- Swagger
