

Priya M.

El Segundo, CA 90245

priyams3fhr_evm@indeedemail.com

+1201-8779383

- Sr. Business Systems Analyst with 10+ years of experience in technical and functional capabilities, End-to-End testing, and API testing.
- Proficient in Software Development Life Cycle methodologies (SDLC) like Waterfall, Agile methodologies such as Scrum, SAFe, and Water-scrum-fall. Good understanding of Kanban, Scrum-ban, Extreme Programming (XP), Rational Unified Programming (RUP).
- Extensive knowledge about Retail and E-commerce platform which includes B2B, B2C, B2G, promotional Marketing strategies. Creative and self-starter with technical, analytical, problem solving, communication, interpersonal skills, capable of forming and maintaining positive and productive working relationships in internal, external, independent, and team environment.
- Actively involved in Gap Analysis between the To Be, and As Is systems; involved in Impact Assessment; SWOT Analysis, Ishikawa Analysis, Business and System Process Flow, Project Charter, mapping available resources to define project worth.
- Collaborated with internal and external stakeholders, and product owner in conducting Cost-Benefit analysis, Work Breakdown Structure, Feasibility study, Market Research, Project vision and scope within the established triple constraints in discovery phase.
- Implemented Requirement elicitation techniques such as Joint Application Development (JAD) sessions, Stakeholder Analysis, Interview, Brainstorming, Focus Groups, Interface Analysis, prototyping to elicit requirements from end-users, non-technical team.
- Documented artifacts such as Business Requirements Document (BRD), System Requirement Specifications (SRS), Functional Requirement Specifications (FRS), and Requirements Traceability Matrix (RTM) along with extracting data and GUI requirements
- Skilled in creating UML diagrams like Use case, Activity and Sequence, Data flow diagrams using MS Visio, and Lucid Chart.
- Designed high fidelity and low fidelity prototypes diagrams and Business process flow diagrams (BPMN) using Balsamiq, MS Visio.
- Assisted Product Owner in prioritization techniques such as Forced Ranking, Moscow, KANO and estimating techniques like Agile Planning Poker, T-shirt Sizing and RVM, alongside worked as a Scrum Master to smoothly facilitate the sessions.
- Implemented JIRA, Azure board extensively to manage User stories, related tasks, create a Road Map, contributed to Scrum Ceremonies like Backlog grooming, Release Planning, Sprint Planning, conducted Daily Scrum, Sprint Review and Retrospective.
- Involved in breaking down Epics and Features into User Stories using INVEST Criteria by employing various slicing techniques.
- Involved in Prioritization of Product Backlog Items (PBIs) with Product Owner to prioritize the for the sprint and design story specific Acceptance Criteria. Assisted PO in Definition of Done (DoD), Definition of Ready (DoR); worked with mature/new teams.
- Assisted in projects involving Data Modeling, Mapping documents, Migration documents, Integration and Warehouse pertaining to different applications, databases, and cloud integration platforms displaying excellent project management skills, and the knowledge of Top Down and Bottom-Up approaches for constructing Data Warehouse using Amazon RedShift and related integrations with CRM tools

- Assisted in Implementing and Customizing Salesforce customer relationship management (CRM) for Marketing, Sales, Service and Content Management for effective customer retention and service delivery process. Assisted in creating orgs for marketing.
- Performed data retrieval, validation by using SQL queries such as Order By, group by, select functions, Rollback, Update, Delete, unions, joins and aggregate functions to extract data from different data sources to easily extract data for analytics in Data Warehouse.
- Knowledge of Source to target data mapping, documenting it and creating list of data exchange interfaces through setting an ETL pipeline using Informatica, testing API integration using POSTMAN, while using SWAGGER to document it.
- Knowledge of implementing cloud Data warehouses, Databases, Data Table Structures, Data marts, Data Analysis, Data Integration, Data Modeling, Schemas and OLAP operations viz. Slice, Dice, Pivot, Roll-up, and Drill-down; delivered analytical Static Reports, Ad-hoc Reports, Interactive MOLAP reports, IT reports, data quality reports, metadata reports and generated intuitive dashboards using reporting tools.
- Built a project on Salesforce platform for tracking and reporting, and created another project for conversion, web to lead forms.
- Assisted in API testing using Postman to check if the APIs are returning the data in JSON, XML format as defined in the API documentation with bearer tokens implementing Swagger Tool and as required by workflow.
- Have profound knowledge of supply chain analytics in retail domain in topics such as forecasting, trends, consumer behavior analytics, inventory management, Market basket analysis, AB testing.
- Knowledge of Supply chain management, Order management, Economic order quantity(EOQ), Periodic inventory, understanding of pricing tactics for revenue growth. Created Dashboards for revenue growth management, Return on Investment.
- Good understanding of functional features such as tokenizing in Marketo tool for lead management, personalization and customer retention by analyzing customer behavior.
- Good understanding of Azure rule engine to include business logic for features.
- Participated in User Acceptance Testing, and looking over Black-box Testing, Functional Testing, System, Integration Testing, Regression Testing, Security Testing, Load/Stress Testing, and Performance Testing in both manual and automation environments
- Extensive experience with building Data visualizations, vizues, stories, dashboards and reports including data processing, data ingestion.
- Extensively used Tableau, Onestream and Power BI for data visualization to bridge the gap between technical and business users with heat maps, tables, interactive and static dashboards, reports, stories utilized by management for portfolio assessment.
- Implemented JIRA to manage issue logs, User stories, daily scrums, Product back log, burn up/ burn down artifacts, and impediments.

Willing to relocate: Anywhere

Work Experience

Sr. Business Systems Analyst

United Airlines - Houston, TX

May 2023 to January 2024

The scope of the project was to provide an ad in the home screen carousel on Inflight entertainment devices or seat back devices or the personal devices through QR code for inflight passengers over the age of 18 to enroll into United Airlines Free Miles program to increase the revenue.

The second part of the project was to provide baggage notifications and connecting flight notifications on delays, cancellations, and connecting gate information for the Airline passengers to individual seatbacks based on the seat assigned in PNR so that the customer will have the notifications at their convenience while in the previous flight.

- Elicited project requirements, business objectives, timelines and respective deliverables; discussed client applications channels, current source system and new components involved in design solution to the problem on a high level with the team and Project Manager.
- Elicited requirements for flight entertainment ads in Airline Industry; sorted based on end user requirements and developer perspective.
- Held facilitated elicitation workshops with team for functional and nonfunctional requirements, conducted grooming sessions and estimated story efforts involved.
- Collaborated with principal Architect on requirements and additional challenging scenarios in inception stage and High-level designs. Documented product/sprint backlog, created charts and dashboards in Azure Devops board, queries for sprints to automate reports;
- Created test data PNR for flight entertainment test scenarios. Implemented NoSQL database to retrieve test data in JSON format.
- Coordinated and communicated with various teams to have the service endpoints enabled for the events/data flow for development, Quality Assurance, Stage, and Production environments.
- Created various documentations for the project such as user/data flow diagrams, and created docs such as Industry Jargon document, team rosters, Sprint Velocity, Capacity planning, Mid sprint status reports and automated reports with power Automate.
- Created multiple Kibana elastic search time series visualizations, key performance indices, time taken by user to enroll into the program, total enrollment opposed to ads displayed and dashboards to explain the management or Business about the performance of ad.
- Reviewed implemented stories and checked functionalities with respect to Acceptance Criteria and closed stories or raised defects.
- Coordinated with front end developers and designers to work on Functional requirements on Zeplin with Editorial team, legal team, and eventually testers to have the bugs raised, opened, corrections implemented in code, tested again, and closed.
- Maintained defect logs, defect reports, Sprint User story reports; renegotiated project commitments when requirements changed.
- Checked data on elastic search Kibana to retrieve and report the interactions or logs of events on inflight entertainment devices. Checked QA environment data points against data in production
- Familiar with C#, Python, OOP, concepts such as Inheritance, abstraction, encapsulation, polymorphism and GitHub tool.
- Familiar with architecture styles such as event driven architecture, Monolithic architecture, Microservice architecture, and concepts of Docker Containers, Rabbit MQ, MQTT.

Sr. Business Systems Analyst

DIRECTV - El Segundo, CA

July 2022 to May 2023

The scope of the project was to provide an annual incremental offer to residential returning customers, and acquisition customers through legacy platform and merged ATT platforms on point-of-sale/agent facing applications from catalogues as well as a correction in the logic layer at the back office. The second

part of the project encompassed price protection, estimation, pricing for certain groups with respect to zip codes, incremental fee changes for offers and other hardware.

- Performed Analysis about the current source system and discussed BPMN with Project Manager to develop a thorough understanding of the business processes, information flow, data synchronization, APIs, types of accounts, customers, and their status for project.
 - Captured Business Ask on Jira Align; Decomposed Epic to Capabilities, features, User stories. Followed Gherkins format and INVEST criteria for user stories. Created configuration and tracking stories. Maintained Kanban board and updated tasks, linked defects.
 - Analyzed As-is and To-be process in discovery phase, prepared Business Process diagram with Solutions Architect in MS Visio.
 - Analyzed current legacy platform and older merged platform by Document, Business Process diagrams, UML diagrams Sequence diagrams.
 - Decomposed and Refined Backlog by raising questions to the business team with regards to acceptance criteria and edge scenarios to ensure Return On Investment is not affected, and applied strategies for Revenue growth management. Communicated cloud infrastructure and solution with teams on day today basis. Managed Change requests throughout the project.
 - Performed API testing using Postman to check if the APIs are returning the data in JSON, XML format as defined in the API documentation implementing Swagger Tool and as required by workflow.
 - Assisted lead PO in writing acceptance criteria, Definition of Ready, framing Definition of Done for potentially shippable product.
 - Shared the communicated business ask with client teams involved and ensured to answer questions and simplify complications.
 - Analyzed, performed trouble shooting and validation with SQL queries such as SELECT, UPDATE, DELETE to validate data I cloud data warehouse associated with customer accounts using Oracle server and also used Informatica for data integration.
- Implemented the Azure Rule Engine to create rules that track the business logic required to achieve the desired outcomes. This involved defining conditions, actions, and other parameters.
- Data integration and Extract, transformation, and loading, cleaning and data mapping, data modelling in informatica power center.
 - Wrote Test Scenarios for End to End, Integration testing teams. Reviewed Test cases from QA teams of various applications based on their implementation and approval of test scenario and case documents related.
 - Assisted Project Managers, and QA team in creating the test cases, test scenarios and test execution. Triaged defects with testers off shore and on site in different environments with the help of sequence diagrams and, maintained RAID log and tracked defects/blockers until closed.
 - Studied and Worked with cloud-based customer data for forecasting consumers opting for offers with respect to sports channel packages and other packages on catalogue. Worked on pricing project where prices for packages were estimated with respect to regions.
 - Worked with order management system teams, tax team and billing team to validate final bills produced by the team.
 - Researched and Assisted in customizing salesforce platform with fields, objects and workflows to meet specific needs of organization for reports. Studied and created a salesforce project for web to lead conversion.
 - Studied and implemented Salesforce reporting and analytics tools to create and deliver reports on sales performance, customer behavior and other key metrics.

- Created reports, dashboards on Onestream tool for sprints such as burn up and burn down charts, and assess analytics and map out customer data with respect to zip codes according to business needs. Implemented tools in Onestream to sort and filter.

- Reviewed Demo of applications and xml files to ensure the numerical related to offer, promotions, and account types match.

Environment: Agile Scrum, Hybrid, Trello, Salesforce CRM, Einstein Analytics, IBM BPM, JSON/XML, MySQL, Tableau 10.3, MS Visio 7.1.9, Power BI, Postman, JIRA Align, Lucid chart, SharePoint, Azure rule engine, MS teams, Google Suite

Sr. Business Systems Analyst

Estee Lauder - Melville, NY

January 2021 to July 2022

The scope of the project was aimed to migrate the on-premise Data from Data center to the aws cloud for efficient inventory management in order to accommodate growing customer base, growing stock keeping units, seasonal demand to provide dynamic supply chain to the organization and to analyze and reduce reverse logistics by integrating CRM system and sending promotional emails by behavior analysis.

- Performed Analysis about the current source system and interviewed Subject Matter Experts to develop a thorough understanding of the business processes, and aid Business Process Improvements.
- Responsible for requirement gathering and design documentation review, identification of Legacy system anomalies & identification of stakeholders & management interaction with the current system and capabilities & features of system
- Assisted Project manager and Product owner to plan, schedule, track, manage defects, and improve teams' competence by creating Work Breakdown Structure (WBS) and Critical Path Analysis (CPA), and milestone list using MS Project and managed epics and product backlog items in Azure Devops.
- Implemented Data warehousing concepts, ETL process, Data visualization, reporting tools, Tableau, Power BI to drive operational intelligence and create key performance indexes for Revenue growth management, and average consumer values with retail data.
- Implemented Databases, Operational data stores (ODS), Data table structures, Data marts, Data analysis, Data integration, Schemas, Online Transactional Processing (OLTP) and Online Analytical Processing OLAP operations like Drill down, roll up, Slicing and Dicing.
- Used ETL tool Informatica Power center to integrate retail Data, clean data, mapped data (Data Mapping) from source to target and created data models (Data modeling) . Managed Repositories in informatica, and managed workflow, monitoring session progress.
- Good understanding of cloud Data warehousing architecture and all the Schemas using Kimball architecture.
- Analyzed and explored the source data to integrate in data warehouse. Removed redundant information from multiple data sources.
- Directed team members on retail data cleaning and performed data mapping for from source to data marts for successful ETL process.
- Created Business Process (BPMN), UML diagrams for scenarios in retail industry with inclusive, exclusive and parallel gateways implementing Visio tool in the inception of the project cycle.
- Created Forecasts, economic order quantity with inventory and sales data for revenue growth in retail industry
- Assisted the QA team in creating the test cases, test scenarios and test execution and assisted the developers in performing unit testing Assisted in carrying-out Behavior Driven Development (BDD) and wrote test cases in Gherkins using Cucumber.

- Created Test plan, Test cases, Test data, Test Scenarios for User Acceptance Testing (UAT), Manual and Automated Testing, GUI Testing, Smoke testing, Sanity Testing, AB testing and end-to-end Regression Testing.

- Created dashboards, vizies, story boards to collaborate with teams in the organization for analytics with customer data for KPIs.

Environment: Agile-SAFE 4.0, Digital asset management software, Product information management, Drupal, Quick sight Analytics, SQL, JIRA (8.6.1), Confluence (7.9.0), Tableau (2020.1), SAP ERP, Swagger (2.0), Postman (v9.0), Lucid chart, Balsamiq (4.1.10), Cucumber, Power BI, Share Point

Sr. Business System Analyst

eBay - Salt Lake City, UT

January 2020 to December 2020

The project aimed to build a Digital Marketing Strategy by migrating data to cloud computing platform, and integrating Sales Cloud Customer Relationship Management to decode and analyze customer behavior based on retail analytics and trends so that the customer could be recommended products through emails, push notifications by extracting and gathering the customer interests which also improves customer retention in retail industry.

- Elicited requirements using Joint Application Development sessions, Surveys/Questionnaire, Interview sessions, Requirement Workshops, Focus Groups, Interface Analysis and performed the As-IS and To-BE Analysis and drafted gap analysis document

- Analyzed customer and internal stakeholder requirements from B2B and B2c based on sale, customer care enquiries and internal communication and communicated to Business Intelligence team so data could be implemented in CRM accordingly.

- Implemented tokenizing to pull data for campaign management, sales enablement and customer behavior using Marketo and the ilk.

- Analyzed various data to understand the relationship that exists between them, profiled data. Created data models (Data Modeling) and mapped data (Data Mapping) from source to target. Good understanding of Data warehousing concepts.

- Developed user stories, managed requirements in Azure Devops and investigated As-in and to-be process flows to support the design and development of Salesforce solutions, cloud solutions

- Studied, Investigated and prepared UML/Business Process (BPMN) diagrams in Lucid Chart for ERP work flow and conducted testing for the same

- Designed personalized & customized Digital marketing strategy campaigns through Clickstream data of customers who visited website or application using Salesforce Einstein analytics and Marketing cloud of Salesforce Lightning console that mapped out complete customer journeys including email, mobile studio to send personalized emails, push notifications.

- Worked with the PO to define Project vision, Timelines, Deliverables, Scope creation, Requirement's analysis, Creating Minimum Viable Product (MVP) and assisted development team in deciding the DOD (definition of done), DOR (definition of ready), assisted Product Owner in converting requirements into User stories and writing acceptance criteria.

- Reviewed Team Velocity on a frequent basis and worked in tandem with Scrum Master at various stages.

- Created UML Diagrams such as Sequence diagrams, Activity diagrams, and Use Case Diagrams, with the help of Lucid chart to help the team to understand the interaction of the system for Marketing cloud.

- Familiar with and Used SQL scripts/queries for data verification at the backend as per the requirements of the mapping document

- Worked with the API team, the Architecture team, and the development team; involved in REST API testing using GET/PUT/POST/ DELETE operations in Postman and Documentation using Swagger.
- Created Test plans & Test cases to aid the testing team in Performance testing, Load Testing and Smoke Testing. Conducted User acceptance test (UAT) and communicated the results to the development team.
- Developed and disseminated Dashboards and Reports using Tableau to get insights in pricing to enhance Revenue growth.

Environment: Agile-Scrum, Salesforce CRM, Azure Devops, Lucid Chart, ARIS, Confluence (7.9.0), Tableau (2020.1), Swagger (2.0), Postman (v9.0), and Einstein analytics, Power BI, Balsamiq (4.1.10)

Business System Analyst

Herbalife - Bangalore, KARNATAKA, IN

February 2017 to July 2019

The focal point of the project was to enhance the customer experience in healthcare industry by adding new and improved features into the application such as a Store finder, and Chatbot feature which will allow the customers to conveniently search for the nearest stores and seek help with their orders, respectively.

- Identified key stakeholders R&D team members, and gathered functional and non-functional requirements associated with Store Management, Marketing, Healthcare guide lines, case studies and documents, Potential Stores through Document analysis, Interviews, Brainstorming & JAD sessions.
- Performed extensive document analysis to analyze business process, supply chain process to aid business process improvements.
- Assisted Product Owner in defining Product Vision, Product Roadmap, and Key Metric (KPI's). Created Stakeholder Matrix, defined communication Channels. Performed As-Is/To-Be analysis to identify the future business requirements and executed a gap into the existing Store Management System and layout, to how it can be constantly updated into the application.
- Prepared process flow models (BPMN) in Visio, such as logical, conceptual, contextual diagrams for the business ask. Refined Backlog.
- Worked closely with the Design/UI team in converting the functional requirements into technical specifications like Prototypes.
- Graphical User Interface (GUI) and User Interface (UI) mock-ups using the Lucid Chart tool.
- Participated in Scrum ceremonies and assisted Product Owner in converting requirements into User stories, writing acceptance criteria, Definition of Done (DoD) and prioritizing them in the Product Backlog using JIRA. Managed change requests.
- Worked with the Mobile application team to create a Wireframe and Mockup of the website to appear the same on the Mobile platform and Created Workflow for mobile application platforms to update the product catalog and user profiles.
- Performed retrieval queries in SQL using SELECT & JOIN for drilldowns to pull data, executed queries to perform data validation and data integrity to achieve high data quality within the new system. Used SQL queries (select, insert, update, delete, sub-queries, joins, etc.) to manipulate the data in the databases.
- Managed testing for the product and created various documents such as RTM, Test plan, test scenarios and test cases.
- Created Interactive reports and detailed dashboards using One stream and Power BI tool for forecasting and marketing needs.
- Supported QA teams in test documents like Test Plans, Scenarios, Test Cases, Requirement Traceability Matrix (RTM).
- Managed defects on JIRA, validated and assigned them to the technical team for remediation and closure.

Environment: Agile-Scrum, JIRA (7.4.0), Swagger (2.0), Power BI (2.7.1), MSSQL server, Postman, LoadRunner, PowerCenter (10.4), Lucid chart, SharePoint (16.0), Tableau, Mule soft ESB, GxP compliance.

Business Analyst

Flipkart - Bangalore, KARNATAKA, IN

July 2015 to December 2016

The project was to implement a Customer Relationship Management System, to analyze customer data, and categorize customers into loyal customer so they can be provided best offers. The CRM was able to analyze customer data, keep track of customer behavior, sort out the customers who are eligible for loyalty program, and send invites to customers to join the program using different marketing techniques.

- Utilized the Guidelines and Artifacts of the Agile-Scrum to develop a detailed implementation and development process
- Requirements gathering from client by conducting elicitation techniques like interviewing, Questionnaires, and observation (Job shadowing), document analysis, Joint Application Development (JAD). Performed Gap Analysis to define current and future business requirements for new functionalities by analyzing As-Is/To-Be states, along with other analysis like Risk Analysis and SWOT Analysis.
- Involved in breaking down Epics and Features into User Stories using INVEST Criteria by employing various slicing techniques.
- Created Mock-up Screens and Wireframes for GUI & BPMN / UML Diagrams like Sequence, Activity and Use Case Diagrams.
- Involved in scrum ceremonies (Backlog Grooming, Sprint Planning, Daily Scrum, Sprint Review, Sprint Retrospective. Helped the Product owner in finalizing the Minimum viable product (MVP) and maintaining the Product Backlog and the Sprint Backlog by assisting the Product Owner and team with doubts in prioritization and estimation of PBI's with Acceptance Criteria
- Built campaigns for the loyal customers onboarding in Journey Builder that mapped out the complete customer journeys which included email marketing, digital advertising, promotional offers, creating Pay per click campaigns with Salesforce Marketing Cloud.
- Cataloged all requirements gathered in HP ALM to facilitate monitoring progress of the project.
- Used Postman for API testing to check if information returned is in JSON/XML format (RESTful API) and documented in swagger
- Helped visualize the data by creating Static reports, Interactive MOLAP, Dashboards, Geo Heat Maps, and other dynamic real-time reports using Tableau and One stream Data Visualization tool; used power BI to extract data from Salesforce, Share Point, Excel to create visuals.

Environment: Agile Scrum, Salesforce CRM, Marketing Cloud, Sales Cloud, Service Cloud, Einstein Analytics, JSON/XML, Journey Builder, MySQL, Tableau 10.3, MS Visio 7.1.9, Lucid chart, SharePoint, Power BI, Postman, Swagger, JIRA, SharePoint.

Business Analyst

Snapdeal - Hyderabad, TELANGANA, IN

February 2014 to June 2015

The project was focused on making changes in the existing e-commerce website by providing product demonstration videos for products along with the product images, and adding the billing details, shipment dates, and the payment history page to view the payment details before making any new purchase.

- Collaborated with Project Manager in creating Project Management Plan, Project Charter, Work Breakdown Structure (WBS), Gantt Chart, Critical Path Analysis, Project Schedule, and Budgeting using MS Project and MS Excel together to share dependencies of flow.

- Gathered requirements from the SMEs like Marketing cloud expert and Einstein analytics expert by performing elicitation techniques like Brainstorming, Interviewing, Introspection, Benchmarking and Market analysis.
 - Created high, low fidelity Mock-Up Screens and Wireframes using Balsamiq for User Interface components for client feedback
 - Created Workflow, various levels of BPMN Process flow diagrams like Use Case, Activity and Sequence diagrams using LucidChart
 - Conducted User Acceptance Testing (UAT), functional walkthroughs for the developed e-commerce website
 - Served as a liaison between four work streams task leads, SMEs, QA team and other stakeholders. Participated in Joint Meetings with various teams involved in the sandbox environment (Design-Development-Testing Phase).
 - Used Tableau for data reporting, key performance indicators, studying the trends, data patterns, data forecasting, and visualization
- Environment: Waterfall, MS SQL, MS Office 365, JIRA, Informatica Power Center, Einstein Analytics, Tableau, Balsamiq, Lucid Chart

Assistant Engineer/ Business Analyst

Secon Private Limited - Bangalore, KARNATAKA, IN
June 2008 to February 2014

The project was an in-house project. The project was aimed at building a software to automate design of irrigation structures, estimate the irrigation structures, and develop drawings for the irrigation structures with dimensions and documentation of design, estimate, and drawing with the help of data collected from the site.

- Elicited requirements from Engineers, R&D departments, consultants, Business sponsors, Analyzed the need to change the existing design of the UI and performed market research to determine best practices by benchmarking the current trends being followed by leading enterprises
 - Coordinated with various consultants from GIS, Construction, Topography, Management department.
 - Requirements workshop, Focus Group, interviews, and Joint Application Development (JAD) sessions. Documented requirements.
- Involved in identification of business rules, process flow with release planning and prioritizing the product roadmap.
- Created low-fidelity, and high-fidelity prototypes by for UI components for progressive feedbacks. Created mock-up screens and wireframes using MS Visio for UI (User Interface) components for progressive feedbacks.
 - Created and documented process flow, activity diagrams, sequence diagrams, use case, and BPMN diagrams using MS Visio.
 - Identified and tracked defects found during testing, reported them to the development team, and verified that they are fixed in subsequent releases.
 - Created documentation such as test plans, test scenarios, test cases, test reports, requirement traceability matrix, and defect reports.
 - Created Project documents in waterfall environment such Business requirement document, Systems requirement document, and Functional requirement documents.
 - Wrote detailed steps that need to be followed to execute a specific test scenario. Test case design involved identifying test scenarios, designing test cases, and documenting them.
 - Conducted User Acceptance Test (UAT) functional walkthroughs for the developed offline software, documented event logs and bug reports

- Created ad-hoc reports using MS-Excel and Pivot tables to do the calculations and created and maintained necessary artefacts.
 - Developed reports on pricing, estimation, cost benefit analysis, and Revenue growth, pricing changes with MS excel.
 - Ensured communication among Graphics design team, Development team, and Subject Matter Experts.
 - Used MS Excel for data reporting, visualizations. Documented business reports, proposed improvement measures and reports.
- Environment: Waterfall, V-Look up, Excel Macros, MS Office, MS Visio, AutoCAD

Education

Masters of Science

State University New York - New York, NY
2021

Bachelor of Engineering in Engineering

Bangalore Institute of Technology, VTU - Bangalore, KARNATAKA, IN
