

Rishabh Suhag

rishabhsuhagcpnmu_ztr@indeedemail.com

302-966-5580

Over 8 years' experience as an accomplished Sr. Business Analyst with extensive experience in entire aspects of general information technology industry and its applications in the Supply chain, E-commerce, and retail sector by constantly creating value for various businesses and clients by delivering quality software systems and enhancing business processes in order to suit organizational needs.

- Having a wide range of expertise in areas such as Demand Planning & forecasting, Order Management Systems, Inventory Management, Digital Payments, Omnichannel Strategies, Enterprise Resource Planning (ERP), Customer Relationship Management (CRM) and business processes improvement. Extensive knowledge about key aspects of Supply Chain domain such as Procurement, Supplier Management, Information Flow, Cash Flow, Physical Material Flow, Electronic data interchange (EDI), Logistic Management, Drop Shipment & Back Order. Extensive knowledge about platforms which includes Omnichannel, B2B, and B2C E-commerce and retail platforms.
- Defining As-Is and To-Be of GAP analysis with proficiency in performing Risk, Cost-Benefit, Feasibility Studies, change management process, handling change requests & conducting impact analysis & its effect on the Triple Constraints.
- Elicited the Requirements through Document Analysis, observations, Joint Application Development (JAD), Brainstorming, Interface analysis, Interviews, Prototyping, Reverse Engineering, & Market Analysis for project ideas.
- Assisted in creating Project Scope Planning deliverables like Work Breakdown Structure, Critical Path analysis, Earned Value Management (EVM), Project Implementation Plan, Project Schedule, and Issue & Risk Management Plan.
- Gathered information necessary to produce well-written, clear & concise high-level & low-level documents from Business Requirement Document (BRD), Functional Requirement Document (FRD), System Requirement Specification (SRS) to Use Cases, and used Requirement Traceability Matrix (RTM), so that all information was detailed.
- Experience in handling Change Request Management effectively implemented change by performing Business Impact Analysis & Technical Impact Analysis of the change in the scope of the project and reviewing it with Cooperative Analysis.
- Analyzed high-level workflow by creating SIPOC diagram, wireframes, mock-up, & low fidelity prototype using Balsamiq & Lucid chart to allow our stakeholders to comprehend the design & define Business Process Flow accordingly.
- Designed architectural & UML diagrams using BPMN, Activity diagrams, Use case diagrams & Sequence diagrams, etc.
- Written several User stories, helped my team define the Tasks in Scrum environment, tracked issues, fact lifecycle management, & created Information Radiators like release Burndown/Burnup charts using JIRA.
- Participated in various Scrum Ceremonies like Product Vision meeting, High-level Grooming, Backlog Refinement Meeting, Release Planning, Sprint Planning, Daily Scrum/Stand-ups, Sprint Review, & Sprint Retrospective.

- Developed User Stories using INVEST criteria and breakdown user stories into tasks using SMART criteria, assisted the PO in defining the Definition of Ready (DOR) and Acceptance Criteria using Gherkin Format for Definition of Done (DOD).
- Assisted Product Owner with High-level grooming using SWAG to determine MVP, MRF, MMF, Horizontal Slicing, Vertical slicing, for Epics. Assisted PO in documenting & prioritizing the items for Product Backlog, & Sprint Backlog.
- Assisted PO in prioritizing epics using the Moscow or KANO or Walking skeleton or Value stream mapping or Dot-voting approach. Helped scrum team in estimating story points for user stories using estimation techniques like Planning Poker, T-Shirt Sizing, Bucket Listing, Affinity team and 100 Points estimation to prepare Product Backlog Items.
- Helped to deliver Potentially Shippable Product Increment (PSPI) as per Definition of Done under acceptance criteria.
- Experienced in implementing different SAFe configurations and defining Capabilities and enabler stories, having participated as part of an Agile Release Train (ART), PI Planning, Scrum of Scrums, PO Sync and System Demos.
- Performed Analysis to Identify the Sources, the Targets & wrote the Transformation Rules for Data Migration.
- Knowledge of Data warehouse concepts like Relational Database, Data marts, Operational Data Store, Data Lake, Normalization, De-normalization, Star/Snowflake schema, Facts & Dimensions Table, attributes, and keys.
- Extensively involved in OLAP operation such as roll up, drill down, pivot, slice & dice, well versed with OLTP functions.
- Used Informatica PowerCenter to perform ETL jobs, mapping requirements & helped developers design reports.
- Experienced in writing SQL queries using the Data Manipulation language and Data Definition Language to analyze and interpret data, using SELECT, VIEWS, JOINS, UNIONS, GROUP BY, ORDER BY, HAVING, WHERE & AGGREGATE functions.
- Assisted in mapping & documenting API to define input parameters & results, tested the API to perform CRUD operations (GET, PUT, POST, DELETE) with HTTP request & verified that Response Time & Error Code were within expectation.
- Lead several test cases for User Acceptance Testing (UAT) by reviewing Test plans, Test Scripts, Test cases, Test Scenarios, Test reports, and Requirements Traceability Matrices (RTM) for the smooth functionality with Confluence & HP-ALM also assisted in STLC - Black & White Box, Performance, Regression, Functional, Non-Functional, Smoke and Sanity Testing of applications.
- Experienced in using SharePoint, Confluence and JIRA to document and track stories and issues and maintaining bug logs.
- Generated several Data visualizations using Charts, Graphs, Dashboards, Trends, Data Summaries, and Stories utilized by management for Portfolio Assessment, Ad-hoc reports, Tree Maps, and Heat Maps using Tableau, and Power BI.

Work Experience

Senior Business Analyst Location

Client: XPO - Greenwich, CT

January 2022 to Present

Description:

Project 1: The scope of the project was to develop a web portal/ Mobile application that leveraged the OCR technology of Amazon Textract to automate the processing of Bills of Lading documents and help reduce inefficiencies and bottlenecks in the pickup and routing process at the first terminal(s) for an LTL carrier and integrate it into the TMS using Amazon API gateway.

Project 2: The scope of the project was to develop a web portal for carriers and to integrate it with the TMS to enable carriers to access information about available loads, submit bids and track shipments allowing for improved carrier selection, increased visibility and better load consolidation leading to reduced costs.

Role and Responsibilities:

- Interviewed Subject Matter Experts and performed extensive Document and Interface Analysis to develop a thorough understanding of the business processes and analysed the warehouse, logistics, inventory, and overall supply chain.
- Created Process flow diagrams to understand the AS-IS process and helped the team design the TO-BE process based on gathered requirements and identified & analysed the gaps between the two models and drafted the gap analysis document.
- Conducted feasibility study, Cost Benefit Study, Risk Analysis, & impact analysis for the proposed enhancements.
- Created Mock-ups for an overview of GUI requirements & UML Diagrams such as Sequence, Activity, Use Case Diagrams and Business Process Model Notation diagram (BPMN) using the MS Visio software for the proper visualization.
- Participated in scrum ceremonies, extensively used JIRA for converting requirement into user stories, assisted Product Owner in writing acceptance criterion, Definition of Ready and framing Definition of Done for the PSPI.
- Assisted the PO in Release Planning and creation of Minimum Viable Product (MVP) to validate the Business Hypothesis.
- Assisted the PO and the feature teams efficiently estimated many user stories using the Planning Poker technique.
- Conducted API testing using POSTMAN thereby using RESTful APIs to check the request and response body by using GET, POST, PUT, DELETE operations on various endpoints and documented the APIs using SWAGGER documentation.
- Used MySQL to query the TMS database and understand the required data and created Data Mapping Documents to map the data from S3 buckets and DynamoDB to the required format of the TMS database.
- Configured test environment for specific test cases, created test data, helped the team identify test scenarios, executed automated & manual unit tests, documented Test Analysis Report, and updated the defect-tracking system.
- Interacted with Development and Quality Assurance team (QA Team) to ensure overall quality and security.
- Monitored and tracked different kinds of bugs, incidents and defects using tracking software's like JIRA.
- Conducted User Acceptance Testing (UAT) and actively participated and facilitated testing of the system via Smoke testing, Integration testing, Regression Testing, API Testing, performance testing, Load/Stress testing.
- Created and Managed different team spaces using Confluence and organized the meetings via the Zoom application.
- Used Tableau to create custom reports & dashboards for OCR accuracy, Processing time, BOL turnaround time etc.

Environment: Scrum Framework, MS Visio, JIRA, POSTMAN, SWAGGER, AWS Lambda, Amazon Textract, Amazon SNS, Amazon S3, Amazon Dynamo DB, Amazon Cloudformation, Confluence, Tableau.

Senior Business Analyst Location

Client: Stanley Black & Decker, Inc. - New Britain, CT

December 2019 to November 2021

Description:

Project 1: The scope of the project was to enhance the ordering system from a static legacy system (Oracle E-business suite) to Oracle Fusion cloud ERP and improve the Order management system making the end-to-end supply chain process more efficient, secured and enable data to flow effortlessly through the business.

Project 2: The scope of the project was to integrate Salesforce CRM, Marketo and Oracle Fusion Cloud in order have a unified view of the business performance. This helped us segment customer data according to customer lifetime value (CLV). This enabled us to launch a targeted email marketing campaign. This resulted in improved Customer Acquisition Rate, Customer Retention Rate, and reduced Customer Churn Rate.

Role and Responsibilities:

- Interacted with various departments (Compliance department, QA and QC Department, Operations Department) within the organization to understand process flows, their needs, and documented Impact analysis by identifying the problems faced by the organization to manage assigned risks and monitor potential impacts as part of the data migration plan.
- Assessed, Defined, facilitated training program for the Point of Sale (POS) practice to support barcode scanning, inventory management, cost calculations, purchases and returns were all implemented, along with receipt support.
- Acted as a liaison between supply, operation, sales, and IT team to refine the warehouse supply based on demand.
- Analyzed EDI data and identified areas for improvement including creating reports and dashboards to track KPIs, such as delivery time, order accuracy, & data quality. Worked closely with IT to develop EDI solutions including specifying the data elements and field that are required for each EDI document, as well as designing and testing EDI mapping.
- Conducted JAD sessions with different functions like Business, Operations, & IT to identify, analyze and validate business requirements in the form of user stories to produce functional specifications for new & existing technology applications.
- Assisted with communicating the vision and roadmap during PI Planning to ensure teams are aligned and ready to execute against them. Collaborated with Product Management, System Architects, Release Train Engineers (RTEs), and other stakeholders, helped team to guide the sequencing of features over time toward the best economic outcomes.
- Supported business strategy by forming 2 Product Backlogs simultaneously in JIRA & translated into user stories within the team's backlog to be used by the delivery team and prioritizing this backlog to reflect stakeholder's requirement.
- Organized meetings with marketing and sales lead to discussing program specifications, and process models for CRM.
- Articulated requirements for each user story with detailed acceptance criteria and Definition of Done.
- Participated in PO Sync and System Demos, helped team satisfy dependencies, demonstrate incremental value, maintain cadence with the Agile Release Train (ART) for coordination & synchronization across development value stream.
- Facilitated meetings (daily stand-up meetings, reviews, retrospectives, PI planning, Inspect & adapt), identified & removed impediments for teams directly or via escalation, captured metrics for improving team performance.

- Analyzed customer data to segment it according to customer lifetime value (CLV), recommended ways to improve performance, worked with marketing team to develop a targeted email marketing campaign based on the segments.
 - Worked with the IT team to design a solution that integrates Salesforce CRM, Marketo, and Oracle Fusion Cloud.
 - Administered ETL Process, identified sources, targets and mapped the data, creating the Data Mapping Document.
 - Used the SQL queries for data retrieval and data validation from MySQL database using MySQL workbench.
 - Helped the Development team in selecting the various Application Program Interface (API) which can be efficient based on the Service Requirements.
 - Coordinated with the Testing team with regards to the API testing, and validated the responses, response time using POSTMAN. Documented REST API documentation and HTTP requests and responses.
 - Ensured completed stories met acceptance criteria by reviewing test plans, output of automated testing or contributing to manual testing efforts. Gathered, reported all relevant metrics (burn down charts, Team velocity, cumulative flow, etc.).
 - Logged & tracked defects using HP-ALM & created an error repository and managed the testing process with the QA team.
 - Gathered and shared critical customer-centric feedback & enabled continuous refinement of the product vision, roadmap, strategy, & design that enabled us to have optimum business value. Prioritized and collaborated in resolution of issues and defects seeking to improve processes across the delivery team by using retrospectives to inspect and adapt.
 - Used Confluence to mediate the project with team members for better progress visibility and for better collaboration.
 - Created various reports like ad hoc reports and drilldown, standard and cross tab reports with bar chart, pie chart and line-chart reports for analytics using Tableau. Also generated reports to analyze the performance of the project.
- Environment: Agile (SAFe- Scaled Agile Framework), JIRA, MS Visio, LucidChart, Oracle cloud ERP, Salesforce CRM, Marketo, MY SQL, HP-ALM , POSTMAN, Confluence,

Senior Business Analyst/Scrum Master Location

Lincolnshire, IL

July 2017 to June 2019

Description:

The logistics company wanted to implement Disciplined Agile delivery (DAD) using IOT device among transport provider such that there is full visibility into containers conditions as data will be constantly transmitted through that device which can be used to reduce the food spoilage through stages of refrigeration, and transportation by providing accurate temperature & humidity control.

Role and Responsibilities:

- Coordinated with 15 supply planners, external suppliers, & global supply team to fulfil requirements for over 500 products.
- Worked closely with business stakeholders and PO on requirement gathering & assessment, identifying problems, streamline processes, security concerns like adding authentication, scalability & various other factors which will lead to reduced overhead cost. Performed GAP Analysis to understand AS-IS business flow and to achieve the desired TO-BE state.
- Conducted requirement analysis, documented Business Requirements Document (BRD) & Functional Specification documents (FSD).

- Carried out document analysis on historical data and other databases to which the new system was tightly coordinated and facilitated elicitation sessions like requirement workshop, Interview, Prototyping, Surveys and JAD session.
 - Participated in Scrum ceremonies, extensively used Jira for converting requirements to User stories, efficient in writing acceptance criteria and framing Definition of Done (DOD) for the Potentially Shippable Product Increment (PSPI).
 - Assisted PO and Scrum team during Product Backlog Grooming & Refinement session, and increased business alignment.
 - Helped team with Product backlog items (PBI's) using techniques like Vertical Slicing for granularity and MOSCOW technique for prioritizing according to the product release and estimated those PBI's using Planning Poker technique.
 - Identified data sources and metadata to populate the cloud data lake for the real-time data being stored in Amazon S3.
 - Also analysed the source definition and target definition where the data would be migrated and created a Data Mapping Document to capture Source Target Mapping to ensure that all required datasets were present in the new system.
 - Created various AD-hoc Reports to help managers better utilize AWS IOT Greengrass platform where a software stack integrated with Machine Learning, Data is collected in AWS EDGE, push it into cloud to train ML algorithm with AWS Sage maker, optimize the model with AWS Sage maker Neo and deploy it back to local AWS storage gateway so that local Inference can be run reducing data transfer cost.
 - Created API specification document including request parameters, response parameters, protocol parameters, endpoints, error codes, validation input & validation errors, to serve as reference for development and testing team. Used Swagger to test and document REST API's CRUD operations (GET, PUT, POST, DELETE) and verified response time and error code.
 - Helped QA teams prepare test documents like Test Plans, Test Scenarios, Test Cases and traced them to user stories using Requirement Traceability Matrix (RTM) in HP-ALM. Helped team understand Test Cases from business perspective.
 - Assisted in setting up activities of Confluence for repository management and linking it with JIRA for proper collaboration.
 - Created dashboards and reports using Power BI to get insights and enhance Key Performance Indicators (KPI).
- Environment: Agile-Scrum, JIRA, HP-ALM, Amazon S3, Amazon IOT Greengrass, Amazon Edge, AWS storage gateway, AWS Sage maker, SWAGGER, Confluence, Power BI.

Business Analyst Location

Client: McKinsey & Company - Mumbai, Maharashtra

June 2016 to May 2017

Description:

Disparate, siloed systems such as instore, online retail store and wholesale business were integrated to build a central inventory, order and fulfilment hub based on Salesforce Service Cloud for SFS (Ship from store), BOPIS (Buy online pick-up in store) and BORIS models to provide a true omnichannel retail capabilities and high-quality customer service which results in an inventory turnover ratio of 4.2.

Role and Responsibilities:

- Elicited omnichannel fulfillment requirements from SMEs, Client's B2B, B2C team, Functional managers, Database administrators by employing techniques like Interviews, JAD sessions and identified configurations for the new system.

- Configured & maintained Salesforce objects, fields, page layouts, validation rules, workflows, and related components.
 - Worked with stakeholders to identify business requirements & provide data driven solutions using Microsoft SQL.
 - Implemented SDLC methodology including Requirement Analysis, Specifications, Design, Develop and Testing.
 - Used Elicitation techniques to collect requirements using JAD sessions, Surveys/Questionnaire, and Interview sessions.
 - Performed Gap Analysis of existing system infrastructure comparing with the new business requirement.
 - Drafted Project charter, Project Scope Statement, Functional Specification Document (FSD), Business Requirement Document (BRD), Functional Requirement Document (FRD), System Requirement Specification (SRS).
 - Directed the technical team in configuring fulfillment options such as buy online pick up in store (BOPIS), buy online return in store (BORIS), ship from store (SFS) in Salesforce Order Management to meet business needs.
 - Helped team identify and create Data Models and Schema Models to validate the availability of the different inventories.
 - Created Mock-Up Screens and Wireframes using Balsamiq tool for visualized the UI components to get client verification.
 - Analysed and tested an UI design also involved in constantly redesigning the system to increase its user friendliness.
 - Coordinated with testers to create Test Plan, Test case, User Acceptance Test and Requirements Traceability Matrix.
 - Analyzed the risk and impact of change requests in the Review and Authorize stage, documenting change requests & impact analysis, presenting reports to the change approval committee updating all documents when approved.
 - Presented a System Demo to the project and sub-division leadership members before deployment.
 - Worked with the Operations Team for compilation of the Release Notes for end-users before Production deployment.
 - Applied Power BI tool for data reporting, studying trends, data patterns, and visualization. In addition to that assisted the team in creating various static, ad-hoc, Tabular, Dashboard, & Technical Reports.
- Environment: Waterfall, MS-Project, MS-Access, MySQL Server, Balsamiq, MySQL Workbench, HP ALM, MS Office (MS Excel, MS Word), Power BI.

Business Analyst Location

Client: Blue dart Express Ltd. - Mumbai, Maharashtra

August 2015 to June 2016

Description:

The company was able to enhance the analytics of inventory management by creating an internal application. The relevant data was migrated from the existing database into the modelled database, which was created specifically for the use of inventory and sales information.

Role and Responsibilities:

- Created and implemented a new-company-wide method of inventory management saving over 20 hours per month.
- Helped the lead BA draft Business Requirement Document (BRD), Functional Requirement Specification (FRS), etc.
- Created low-fidelity and high-fidelity mock-ups and wireframes using Mural online tool.

- Used UML to create Use Case, Activity, and Sequence diagram to understand swim lanes using Lucid chart.
- Used Waterfall for streamlining the team's development activities and overall process and to document every process.
- Documented Source and Target definition and all ETL transformation in a clear and precise data mapping document.
- Used MySQL to validate database using SQL queries like Joins, Group by & SQL Aggregate queries for data profiling.
- Aided developers with design of migration plan and mapped database with Informatica PowerCenter to ensure a RDBMS was designed to operate as per the business logic while incorporating information imported from flat and CSV file.
- Designed & documented Test Plans, Test Scenarios, Test Cases based on business requirements & design documents.
- Prepared Test Data for positive & negative test scenarios for functional testing using boundary value analysis & exhaustive testing as documented in test plan.

Logged all defects of the project in HP ALM for better tracking purposes.

- Documented Bug Report and Categorized them based on severity and Priority for defect tracking and reporting.
- Took part in all phases of testing; Smoke testing, Sanity testing, Performance testing, Graphical User Interface (GUI), Functional testing, System testing and Regression testing and support User Acceptance Testing (UAT).
- Intensively used SharePoint to share documentation of various domains and efficiently management systems.

Environment: Waterfall, MS Project, Lucid Chart, MySQL Server, MySQL Workbench, HP ALM, MS Office (MS Excel, MS Word), SharePoint.

Education

Bachelor of Engineering in Engineering

Manipal Institute of Technology
