Professional Experience

- Around 7 years of overall experience in all SDLC phases, including analysis, design, development, and deployment of web applications using Core Java and Node.js.
- Extensively worked with J2EE technologies like JSP, Servlets, EJBs, JMS, and JDBC.
- Very strong working experience developing Web Services implementing RESTful and SOAP Protocols.
- Proficient in building server-side applications using Node.js, harnessing its non-blocking, event-driven architecture.
- In-depth knowledge and expertise in developing and implementing several JAVA/J2EE frameworks, including Spring, Hibernate, Spring Boot, and Spring MVC.
- Hands-on experience in web application development using HTML, CSS, JavaScript, jQuery, and Angular10.
- Used IDE tools Eclipse 3.2, Netbeans7.1.2, IntelliJ IDE for JAVA/J2EEApplication development.
- Developed serverless functions using AWS Lambda, optimizing backend logic for event-driven, serverless computing, and ensuring seamless integration with other AWS services.
- Experience in creating build scripts using Ant, Maven, and Gradle tools.
- Having good knowledge of NoSQL databases like Dynamo DB and Cassandra. Worked with MEAN/MERN stack for developing applications.
- Developed scalable, high-performance, and maintainable applications using Scala programming language.
- Experience in defects tracking systems and bug life cycle using JIRA and Rally.
- Expertise in Amazon Web Services like EC2, Simple DB, RDS, Elastic Load Balancing, SQS, SNS, AWS Identity and access management, AWS Cloud Watch, Elastic Beanstalk, and Cloud Front, Redshift.
- Experience configuring S3 versioning and lifecycle policies to backup and archive files in Glacier.
- Experience creating Jenkins pipelines with Docker and jobs to run the PRs from GitHub automatically.
- Expertise in building and implementing strategies to decompose applications into multiple microservices to run on dynamic containers.
- Worked on AWS Code-Pipeline to build CICD workflow using AWS Code-Build, and Code-Deploy, and worked with many other AWS tools to build and deploy Microservices using AWS ECS.
- Worked on Configuration management tools like Ansible.
- Performed unit testing using JUNIT and MOCKITO aiding test-driven development in some Scenarios.
- Used Log4J to capture the logs that include critical business-related information.
- Gathering system and application-level metrics using Dynatrace.
- Developed AWS CLI script automation for EMR (end-to-end) and other AWS services and built Serverless Arch using Lambda (Boto3) and Step Functions.

Technical Skills

Programming Languages:	JAVA/J2EE, C++, Python, Shell Scripting, SQL
Web Technologies:	HTML, CSS, JavaScript, React, Angular10, jQuery, NodeJS
Java/J2EE Technologies:	JSP, Servlets, JDBC, EJB's, JMS, JUNIT, JAXB, Groovy
Frameworks:	MVC 1/2.0, Spring/Spring Boot, Hibernate 3.0
Version Control:	GitHub, GitLab
Databases:	Oracle SQL, MYSQL 5.0, MS SQL, PostgreSQL, MongoDB
Agile Tools	JIRA, Rally
Application/Web Servers:	Web Logic, Apache Tomcat, Apache HTTP
IDE Tools:	Eclipse, IntelliJ, VS code
Build Tools:	Maven, Gradle
Cloud Environment:	AWS, Azure
Build and Release Tools:	CI/CD, Splunk, Ansible, Jenkins, Azure DevOps
Containerization Tools:	Docker, Kubernetes
Methodology	Agile, SCRUM
Cloud Console Services	IAM, VPC, Snowball, SES, SNS, SWF, AWS SDK'S, Pinpoint, Elastic cache, Ops Works, code commit, code pipeline, config, Server migration, Amazon EMR, Redshift, storage Gateway, API Gateway, workflow
Webservice Technologies	AXIS2, SOAP, WSDL, WADL, REST (JAX-RS).

Employment

Backend Java Developer – DISH NETWORKS, DENVER, CO

March 2023 – November 2023

- Developed and maintained RESTful APIs using Spring Boot framework utilizing its features like Spring Dependency injection, Spring Web flow with Spring MVC and Spring BOOT in IntelliJ IDEA for efficient and scalable API development.
- Performed GitHub stash and Terminal commands to clone, fetch, merge and push the code and created pull requests for changes that are made.
- Developed CI/CD system with Jenkins on Kubernetes environment, utilized Kubernetes and Docker for the runtime environment for the CI/CD system to build, Test and Deploy.
- Followed Agile methodology and involved in daily SCRUM meetings, sprint planning, showcases and retrospective and used Rally as a tracking tool for the sprints.
- Used OAuth authorization framework to enable application to obtain limited access to user accounts on the Restful Service developing Microservices and creating API's using Java Spring Boot framework using Gradle as a build tool and PostgreSQL as an enterprise level database.
- Developed API's and REST API proxy using APIGEE edge and for publishing events.

- Developed Docker image and containers for the application by configuring Docker file, using Docker Compose to manage images.
- Integrated and optimized MongoDB and MySQL databases, improving data storage and retrieval performance.
- Developed application to perform CRUD operations using Java 8 on MySQL and Designed Web Application to connect to User Pool, create users and verify login using AWS Cognito for security.
- Created Swagger API to generate interactive API documentation that lets users try out the API calls directly from the browser.
- Stream applications using Kafka APIs and Kafka Streams API. Wrote Producer and Consumer API to publish and consume data from topics respectively.
- Utilized Dynatrace for monitoring API performance, identifying bottlenecks.
- Utilized logz.io for log management and analysis, identifying and troubleshooting issues.
- Used SLF4J for log messages.
- **JSON output** was tested using **POSTMAN**. Implemented **unit testing** with **Mocha** and **automated** the whole test environment with **Selenium**. Used **JUnit** for unit testing the backend code.
- Deployed services both on-premises using **Rancher** and in the AWS Cloud environment.
- Provided production support calls which provided me with valuable insights and a comprehensive understanding of the dynamics involved in maintaining and supporting live API services and observed the team responding promptly to critical issues and working collaboratively to resolve them.

Tools/Technologies: Java 11, Java 8, RESTful Web Services, 4, Java Script, Python, Gradle, Spring Boot, IntelliJ, XML, Tomcat 7.0, GitLab, AWS EKS, AWS CloudWatch, Elastic Load Balancer, VPC, AWS OpenSearch, Logz.io, Dynatrace, cloud trail, Artifactory, EC2, Dynamo DB, Oracle SQL, Postgres SQL, Kubernetes, Rancher, Alfred, Postman, Swagger, AWS Lambda, Groovy

Full-Stack AWS Developer - RMS NEWARK, CA

August 2021 – February 2023

- Experience in modifying the existing Backend code for different enhancements.
- Involved in J2EE patterns MVC, Dependency Injection (DI), Inversion of Control (IOC), Data Access Object (DAO), Business Delegate, Service Locator, and Singleton for the enterprise application.
- Responsible for Development of Web page using HTMLS, JavaScript, jQuery, **React.js**, Immutable JS, CSS, SASS/SCSS including Ajax controls and JSON.
- Leverages knowledge of W3C standards, classical Model View Layer (MVC) architecture and cross-browser development techniques.
- Used **Babel** as a transpiler, **Webpack** as the module bundler in **React.js** and **Redux**.
- Experience in handling multiple application server nodes using WebSphere Application Server Network Deployment Manager.
- Developed test cases and performed unit testing using the JUNIT Test case.
- Developed different JavaBeans and helper classes to support Server-Side programs.
- Experienced in the architecture, designing, and developing of high-traffic applications built in Java/J2EE using MVC architecture.
- integrating spring, Hibernate, and Struts frameworks in SOA.
- Used spring as an application framework to build the Services layer and implemented its core modules such as Spring Core Container, Inversion of Control, Data Access, and MVC. Used XML/java /annotation spring boot configurations.
- Implemented ORM (Object Relational Mapping) framework with Hibernate for mapping Java classes and database tables.
- Designing and implementing scalable, Restful, and microservices-based mobile back-end. The back end is written in Java using Spring Boot for simplicity and scalability.

- Experienced in coding Web Services with JAX-WS (SOAP) and JAX-RS (Restful). Used Apache Tomcat as an application server to handle the deployments of different applications.
- Hands-on experience on GitHub as Version control for code repository and Jenkins for continuous integration.
- Hands-on experience creating auto-scaling groups based on memory and CPU usage to handle excessive or under-use workloads without manual interference.
- Build scripts on AWS cloud for scheduling EC2 auto-scaling load balancer with python SDK.
- Good experience with Dynamo DB and, Redshift, Lambda.
- Worked on a microservices project to build docker containers and deploy them to Dey, iTest, Scale, UAT (SIT), and PROD.
- Enhance the SDLC cycle using Docker containers delivered with OpenShift for web application deployment. Good understanding of the OpenShift platform in managing Docker containers and Kubernetes Clusters.
- Worked closely with the Testing team for issue fixing and coordinating test setup testing.
- Created detailed design document, use cases, sequence, and class UML diagrams using Rational Rose.

Java Developer –

TATA Consultancy Services - AT&T

Jan 2020 – July 2021

- Extensive experience in various Agile methodologies like Test Driven Development (TDD).
- Involved in developing UI using Spring MVC framework, JSP, JSTL, HTML5, CSS, JavaScript, jQuery and AngularJS.
- Created Reusable Modules and Custom Directives in Angular2.0 which got used in various places of application.
- Implemented AngularJS Controllers to maintain each view data. Implemented Angular Service calls using Angular Factory
- Tested all application controllers extensively with AngularJS built-in testing facilities.
- Extensively used core java concepts like Multithreading, Collections Framework, File I/o and concurrency.
- Experience in Core Java concepts such as OOP Concepts, Collections Framework, and Exception Handling, I/O System, Multi-Threading, JDBC, Generics.
- Used Java8 features in developing code like Lambda expressions, creating resource classes, fetching documents from database.
- Used design patterns like Singleton, Data Access Objects, Factory and MVC patterns.
- Testing and production support of core java based multithreading ETL tool for distributing XML data into Oracle database using JPA/Hibernate.
- Created POJO's and DAO's for the database entities using Spring JDBC annotation mappings
- Integrated with Spring Cloud projects to provide distributed tracing and other features.
- Developed microservices with Spring and tested the application using Spring Boot.
- Used Spring Core annotations for Spring Dependency Injection, Spring MVC for Rest API's and Spring Boot for microservices.

Software Engineer –

TCS Offshore

April 2018 – December 2019

- Developed an angular 7 application which displays Recommendations, offers etc. at User level.
- Worked with Rest APIs to improve the TPS and performed Performance testing.
- Discussed project progress and coordinated with Business Users, App/Product Owners, collected feedback on different stages to address concerns, evaluate, and improve software.

- Developed user interface using React JS.
 - Updated the confluence pages with proper documentation and test results at every phase for future purposes.
-

Full Stack Developer – Megatron IT

June 2017 - Aug 2018

- Actively involved in design and development of multiple cutovers and major upgrades of Application which includes Platform upgrades.
- Developed an angular application which displays Promotions and Recommendations (by which planners can create different levels of promotional events).
- Performed migration from TFS to Azure DevOps (VSTS). Configured and set-up build and release pipelines and supported deploying windows, Kubernetes (K8s) cluster with Azure Container Service (ACS) from Azure CLI and utilized Kubernetes and Docker for the runtime environment of the CI/CD system to build, test and deploy.
- Created Splunk dashboards to achieve active monitoring of systems and configured alerts as required.
- Updated the confluence pages with proper documentation and test results at every phase for future purposes.
- Worked with Upstream (Optimization) and Downstream (Discount Services) for the validation of message flow and recommendations jobs.
- Worked on setting up the DR (Disaster Recovery) environment for our entire Application and underlying modules, involved in terms of architecture, testing and cutover.

Education

Master of Science in Computer Science, California State University, East Bay

Bachelor of Technology in Computer Science, Gandhi Institute of Technology & Management
