Phone: 302-966-5580

Sr Business Analyst

SUMMARY

- Business Analyst with 9+ years of experience in Product Development, Business Development Processes, System and Data analysis with extensive work experience in the domain of Banking and Finance.
- Sound understanding of compliances Anti Money Laundering (AML)/Know Your Customer (KYC), Bank Secrecy Act (BSA), Customer Identification Program (CIP), Financial Action Task Force (FATF), National Automated Clearinghouse Association (NACHA) and familiar with International Monetary Fund (IMF), Fair credit reporting act and billing act, Customer Due Diligence (CDD) and CCAR/DFAST.
- Well-versed with projects like MYCA, GO2, Product Composer, EAPPLY, Triumph, Anti-money Laundering (AML)/Know your customer (KYC), Fraud Detection, ACH Transactions, CAL (Collateral Asset Line), Credit Risk management, Online Mortgage applications, wealth Management, FCRM and Payments.
- Experience on using several Software Development Life Cycle (SDLC) methodologies ranging from traditional Waterfall, Waterfall-Scrum Hybrid to modern Agile Frameworks like Scrum, Kanban, Scrumban and Scaled Agile Framework (SAFe).
- Designed and documented Business process re-engineering, business process modeling, historical data reports analysis accompanied by conducting and facilitating elicitation sessions such as Interviews sessions, Brainstorming, Focus group, Requirement workshops, Document analysis, and Joint Application Development (JAD) with internal and external stakeholders.
- Experience in conducting Gap analysis, Impact analysis, SWOT analysis, Root cause analysis, Feasibility study, Risk Analysis, and used Business Process modeling to perform As-Is and To-Be analysis and drafting the reports.
- Extensive practical experience with Project Management deliverables like PI Planning, Project Plan, Project Scope Statement, Project Charter, Work Breakdown Structure (WBS).
- Assessed risks, Production issues, impediments efficiently and possess in-depth knowledge in Requirement Management, Change Management, Risk Register, Defect Management, Release Management, Project Management, and Risk Management using JIRA, Confluence, HP ALM, SharePoint, and MS Project.
- Facilitated Change Request Management, created and validated Business Requirements documents (BRD), Use-Case Specifications, Functional Requirements Document (FRD), assisted in creating SRS and verified Requirement Traceability Matrix (RTM).
- Experience in building Unified Modeling Language (UML) diagrams including Use Cases, Activity diagrams, Sequence Diagrams, Class diagrams, Data Flow Diagrams, and transforming the requirements gathered into functional specifications focusing on workflow analysis and design, user interface design, data flow, process flow and (Entity Relationship) Diagram.
- Experienced in writing User stories using INVEST criteria and handling the Requirement Churn. Efficient in facilitating the prioritization of the PBIs using techniques such as MoSCoW, Kano Model Based and Business Value Based.
- Hands on experience in participating Sprint Ceremonies (Product Backlog grooming, Sprint planning meeting, Daily Scrum/Stand-up meeting, Sprint review meeting and Sprint retrospective meeting) for Agile Scrum.
- Hands on experience in using estimation techniques such as Planning Poker, T-shirt sizing, Relative Mass Evaluation.
- Assisted Data Architect in creating Data Models like Conceptual Data Model and Logical Data Model in form of entities and relationships (E-R) to capture the user requirements properly in the underlying database.
- Extensive working and implementation knowledge on Databases, Data Table structures, Snowflake schema and Star Schema, Data Marts and OLAP operations such as roll-up, drill-down, slice and dice.
- Practical knowledge of Data Warehousing architecture, implementation approaches, dimensional modeling and translating the business requirements into various types of dimensions and performed Source to Target mapping.
- Extensive knowledge of Data Profiling & Data Integration. Operational knowledge with the Extract, Transform and Load process using ETL tool Informatica where performed (Source Analyzer, Target Designer, Transformation Developer, Union, Joint) transformations.
- Created Data Mapping Document by defining the data to be moved, mapped the data by matching source fields to destination fields, for successful data integration made sure that the source and target repositories had the same data models.
- Took a part in collaboration with the Quality Analysis Team in devising the Test Plans, Test Cases, Test Scripts, Test Scenarios, Test Data, issuing the Test Reports, and tracking the requirements all along with the Requirements Traceability Matrix (RTM).
- Facilitated the test processes by using life cycle (STLC) and Defect tracking tools like HP ALM, JIRA-Zephyr tools.
- Experience in Testing Life Cycle and supervising Black-box Testing, Functionality Testing, System Testing, Integration Testing, Regression Testing, User Acceptance Testing (UAT), Load/Stress Testing, and Performance Testing.
- Monitored the Defect Life cycle of the defect from assigning it to the tester from the initiation to closure of the defect during its life cycle.
- Familiar with all the architectures (3-Tier, 2-Tier, and N-Tier) where we developed and maintained the functional process logic and UI.
- Facilitated in API testing to ensure REQUEST and RESPONSE and checked the end points using POSTMAN and Created API documentation to specify how to effectively use and integrate with an API in SWAGGER.
- Collaborated in developing REST APIs and performed requests like GET, POST, DELETE and UPDATE with developers.
- Excellent Interpersonal skills to interact with end-users, Subject Matter Experts (SME's) and Project Stakeholders.
- Excellent Analytical, Problem solving, Communication and Documentation skills. Dedicated & Self- motivated, proven leadership capabilities in working with different projects and Time management skills.
- Used Business Intelligence tools like Power BI and Tableau for visualizing and sharing the data and for examining 'what IF' scenarios.

- Assisted the associates and the team in conducting financial research by performing basic financial modeling and handling administrative duties.
- Developed knowledge in General Ledger, Accounting Principles, Transaction Management, Risk Management and Compliance.

TECHNICALL SKILLSET

Finance and Banking Domain knowledge	Loans, Payments, Card, Risk, AML, KYC, CIP, BSA, FATF, USA PATROIT ACT, NACHA, Financial Portfolio, ACH, CAL, CCAR/DFAST, Mortgage
Project Management and Reporting Tools	Rally, JIRA, Swagger, POSTMAN, PAUI, MS-Project, MS Share Point, Zephyr, Tableau, MS Office suite
Modeling Tools	ORACLE SQL developer Data Modeler, Balsamiq, Lucid Chart, Smart Draw
Requirement Management	MS Office, JIRA, Confluence, HP ALM, HP QM
Database	Couchbase, Cornerstone, MS Access, Oracle DBMS, ODS
Testing Tools	Postman, HP ALM, Load runner, Bugzilla and SOAP UI, Cucumber
ETL Tools	Informatica, Talend, oracle data integrator
Languages	JSON, HTML, XML, SOAP, REST, CSS, and Java,
BI Tools	Tableau, Power BI, Board, Dynatrace

PROFESSIONAL EXPERIENCE

1. FINRA

Dec 2022- Present

Product Owner/Sr Business Analyst Washington DC

FINRA built micro-applications for different stakeholders like SEC, NASAA, Firm and State to login to the accounts with different credentials and to be able to access the broker dealer and investment advisor's info and conduct exams like IARCE for the firms, state, and different users to maintain it's data integrity.

- Micro applications were built on One app framework with CRD being the source system to fetch the details for the Reg and Cred WS.
 - Serviced the data through Graph QL functions to resolve latency due to API calls and over fetching issues by allowing customs client queries.
 - Gathered high-level requirements via **Interviews, Document Analysis, Surveys/questionnaire, and Focus Groups** and filtered those requirements into functional and non-functional specifications.
 - Documented the User stories and Acceptance criteria in JIRA at the most granular level possible to give a fair idea of the high-level tasks to complete and deliver the features and capabilities successfully in AHA.
 - Prioritized the features and US according to the priority defined and committed in the product roadmap which is committed in the 1st quarter.
 - Planned and facilitated scrum ceremonies including Feature refinement, sprint planning, Backlog planning for the two-week cadence of the PI.
 - POSTMAN was extensively used to perform BDD testing on a regular basis and for validating the user stories for all the build activities and used different Get All functions to get product data.
 - Performed analysis using tools like SQL developer and Golden SQL to identify the feasibility and reuse of core APIs and tested in POSTMAN.
 - Developed system flow diagrams to give solutions using the FINRA inbuilt integration tool called TRACE that aids in integrating with third parties' solutions like BTDS & ATDS by working on determining the technical, functional and data specs by coordinating with engineering teams.
 - Using statistical tools to **interpret data sets**, paying particular attention to trends and patterns that could be valuable for **diagnostic and predictive analysis efforts**.
 - Involved in the discussions with compliance teams AML to manage the integrity of the customers data to eliminate fraudulent activities at FINRA.
- Environment:** Scrum, JIRA, AHA, REST API, GraphQL, CRD, REGWS, CREDWS, POSTMAN, FINPRO, SQL developer, Golden SQL, Power BI, Confluence, Swagger.

2. American Express

Apr 2021- Dec 2022

Sr Business Analyst Phoenix, AZ

American Express has built PACE (Product Assembly and Configuration Engine) which is a platform that is designed to be central system of record for all Product Metadata to define AMEX products, including the features of the products for specific arrangements of those products with defined feature terms. It's an enterprise capability built as a collaborative effort between AR and Enterprise architecture with the objective of changing new products are created at the enterprise level. To meet the objective of business flexibility and reducing the time to market we sourced the data from PACE and not hardcode in multiple platforms across the enterprise.

- PACE Integration was built on reliable transaction framework integrating with external systems G*, PMC, Triumph, Eapply, Global Pay, ACCR, Shine, GAR, GPC, GDP, GO2 and MARS.
- Serviced the data through Graph QL functions to resolve latency due to API calls and over fetching issues by allowing customs client queries.

- Documented the User stories and Acceptance criteria in Rally at the most granular level as possible to give a fair idea of the high level tasks to complete and deliver the feature successfully.
 - Tracked & communicated Agile metrics which may include team velocity, Sprint/program Increment (PI) progress within Scaled Agile framework.
 - Planned & facilitated scrum ceremonies including Feature refinement, sprint planning, Backlog planning for the two week cadence of the PI.
 - JIRA was extensively used for recording the incidents are creating dependency of features, capabilities, and intakes with other teams in GAR.
 - Loaded the data manually through the PAUI screen which was integrated with the PACE central system for any changes made to a customer account and for all Release testing activities for several projects.
 - POSTMAN was extensively used to perform BDD testing on a regular basis and also for validating the user stories for all the build activities and used different Get All functions to get product data.
 - SWAGGER documentation was clearly understood and suggested different structures of schemas for certain projects like LOC and Thread needle, where defined each attribute with the description after multiple discussions with internal and external stakeholders.
 - Involved in the build of Functional Mapper which translated the data from PMC structure into our Couchbase Database.
 - Created the data structures of Arrangement, Translation, Experience, Configuration and Terms table to migrate the data into Cornerstone tables to support a customer journey for all the product data.
 - Integrated the Front-end to Back-end for our newly build PACE UI with the PACE backend to help create a capability for the internal BOs to edit, append and make all necessary changes for US and International products.
 - Worked closely with the developers and tech leads to understand the root cause for production and release testing issues.
 - Worked closely with my product managers to get all the details for the UI Intakes and participated in the capability refinement sessions which further broken down to features and User stories.
 - Wrote some Couchbase queries to get the arrangement data on a daily basis to help all cross functional teams.
 - Build all necessary enhancements for the existing features, terms, and configurations to complete customer's acquisition journey from a product perspective.
- Environment:** SAFE, JIRA (8.6.8.6.1), Rally 3.0.0, REST API, One Data SOR, One Data BST, GPC, POSTMAN, GraphQL, Couchbase 3.x SDK, Java 11, PACE Portal, PAUI Portal, MYCA, Swagger V 3.0.0, Informatica Lucid chart, Balsamic and MS Project server.

3. State Street Bank

Jan 2020- March 2021

Sr Business Analyst

Boston, MA

State Street Bank created a **Portal** which is **Automated Software as a service (SaaS)** for Anti money Laundering (**AML**) and Know Your Customer (**KYC**) platform. This **fraud detection** application enables a business to identify and report any suspicious financial activity that could be an attempt at **money laundering**. The server performs administrative functions of gathering, comparing, and analyzing the data, where the server extracts data from identification documents that matches extracted data to customer inputted data. The server connects to the databases to confirm customer ID.

- Ensured Customer Identification Program (**CIP**), Customer Due Diligence (**CDD**), Bank Secrecy Act (**BSA**) policies are followed based on the **Know Your Customer (KYC)/AML and FCRM** norms and identified unusual activity which leads to Money laundering.
- Experienced in managing **project lifecycle**, **project resource estimation**, **project schedules** and process requirements. Tracking and reporting all project aspects such as **project status**, **issues** and **facilitating Functional Specifications** with programmers, QA, and testing needs.
- **Elicited requirements** by interacting with business users in **JAD sessions**, **structured interviews**, **brainstorming** and **document analysis**.
- Acted as a liaison between the **business**, **data & technical teams** throughout the **project lifecycle** by extracting the **business requirements**.
- Used **Lucid Chart** to draw and document the process flowchart for **As-Is** by Interviewing and questionnaires for analyzing the operations of the process before making any improvements and **To-Be** analysis for future state mapping.
- Performed **GAP analysis** to different business processes for product evaluation to ensure all the features and functions outlined in the business requirements are present and working as expected.
- Created some **UML** diagrams like **Activity diagrams**, **Sequence diagrams**, **Use Cases** and **Data Flow diagrams** using **Lucid Chart**.
- Created **wireframes** and **mock-ups** using **Balsamiq** to help developers visualize the **UI components** and got them validated by the stakeholders.
- Coached team members on **Agile principles** and provided general guidance on the methodology.
- Strong leadership skills where I am able to **prioritize**, **delegate tasks** and make **decisions** quickly while maintaining a focus on the bottom line.
- Wrote User Stories and determined **Acceptance Criteria & Definition of Done** for **Potentially Shippable Product Increment**.
- Prioritized the **product backlog items (PBIs)** using **MoSCoW Prioritization Technique** for this portal.
- Participated in various Scrum ceremonies like **Team Grooming**, **Product backlog grooming**, **sprint planning meeting**, **daily stand-ups meeting**, **sprint review meeting**, **sprint retrospective meetings** with team and Scrum Master (**SM**).
- Extensively used **JIRA** to record and maintain the **User Stories**, **Product Backlogs**, **Sprint backlogs**, **Burn-down** and **Burn-up charts**.
- Collaborated with architect in creating **ER diagrams** like **Conceptual model** and **Logical model** to analyze data requirements.
- Assisted in identifying the source and target data to identify any gaps and, performed **Data profiling** to clarify the structure, content, relationships of the data and also, clean any anomalies for the data quality assessment.
- Was a part of full-extraction and performed some basic transformations like source **qualifier**, **Joiner & union**, and normalizer in **Informatica**.
- Created **Data mapping document** by mapping the source and target data and also recorded the data transformations.
- Verified the **Test Cases** to the system requirements and validated **end-to-end User Interface (UI) application**.
- Executed system test plans, test cases and test data on MS Excel to perform System Testing, Smoke Testing, Regression Testing, Black-Box Testing, Sanity Testing and logged down the defects and systematically managed them in JIRA.
- Extensively involved in the **User Acceptance Testing (UAT)** to ensure the **requirements** and **functionality** of the system were drafted.

- Prepared **Requirement traceability Matrix (RTM)** to trace user requirements and link them to the test cases ensuring all the test cases are covered. Ensured the delivery of documented requirements as requested by the stakeholders.
 - Tested **REST API** using different methods **GET/POST/DELETE**. Gathered information about Request, Response, types of parameters of Application Programming Interface (**API**). Mapped URL for the **RESTful API** to the business requirements and operations.
 - Was a part of design and implementation of **RESTFUL web services** using various data format (**JSON, XML**) to provide an interface to the various third party applications.
 - Created an **API documentation** using **Swagger Tool** to execute the scripts during deployment or during manual testing.
 - Created dashboards where designed interactive reporting with charts, graphics, and illustrations with tableau.
- Environment:** Scrum - Waterfall Hybrid, JIRA (8.6.8.6.1), REST API, Lucid chart, Balsamic, MS Office, MS Project server, Oracle DBMS 11g, Oracle web logic server 12Cr2 (12.2.1.4), Portal, Swagger, Informatica, Tableau (2019.3).

4. Citizens Bank

Nov 2018 – Dec 2019

Business Analyst

Johnston Rhode Island

Citizens Bank proposed to introduce a new loan scheme, Collateral Asset Line (CAL) wherein a loan is provided to the clients by taking their Financial Portfolio as collateral. The aim of the project is to build a Collateral Monitoring System which will be capable of recording, analyzing, and valuing the financial portfolio of a client, authorizing by checking the credit information and estimating an appropriate amount which can be loaned. The system will also monitor the collaterals on a daily basis, major drop in the value of the collaterals will trigger a notification to the customer asking them to add more collateral or pay certain amount of cash.

- Interviewed **Subject Matter Experts (SMEs)** and performed extensive **Document Review** to develop a thorough understanding of business processes to aid **Business Process Improvement (BPI)**.
 - Performed **ROI Analysis** and **SWOT Analysis** in order to be prepared for potential business and technical risks to the system.
 - Identified **Business Rules** for credit line approval by conducting extensive one-on-one interviews with Subject Matter Experts (SMEs) and by analyzing the **Business Documents** and also led high level requirement gathering activities by employing **elicitation** practices such as **JAD Sessions, Focus Groups, Interviews, Requirement workshops** and **Document Analysis**.
 - Assisted the global head of the Portfolio Management Group in creating and updating business management presentations and analysis.
 - Analyzed, modified, and documented **Functional** and **Non-Functional Requirements**. Identified project requirements, processes, and **data dependencies**.
 - Partner directly with various sponsors, leadership, and senior management through the Portfolio Management Process.
 - Prepared and analyzed **UML diagrams** like **Process diagrams, Sequence diagrams and Activity diagrams** using **MS Visio** to analyze and design structure, behavior, and interactions in the system design.
 - Created **Mock-ups** and **Wireframes** using UI components such as **Radio-Buttons, Data- Entry Fields, Check Boxes, Drop-Down Lists** to retrieve data for **Client verification** of GUI.
 - Facilitated **Scrum Workshops** to familiarize the team with Scrum as a concept and process skeleton. Also, conducted **User Story Writing Workshops** for the stakeholders who were not proficient in the art.
 - Negotiated solutions for the **user stories** gathered and **prioritize** the same to provide the highest business value.
 - Served as a **point of contact for implementation activities** and coordinated with implementation team to cate plan, determined impacts and formed resolutions. Served as **escalation point and coordinate** risk, issues, and dependencies for the change requests.
 - Determined **Acceptance Criteria** for **Potentially Shippable Product Increment (PSPI)**.
 - **Prioritized Product Backlog Items (PBIs)** to pick **Sprint tasks** using Kano Model Prioritization technique.
 - Facilitated, conducted, and established agendas for **Sprint ceremonies (Sprint Planning, Daily Scrum, Sprint Review, Sprint Retrospective and Backlog Refinement/Grooming)**.
 - Assisted Scrum Master to track and improve efficiency of **Team Velocity** using **Sprint Burn-Down Chart & Product Burn-Down Chart**.
 - Strategically handled **requirement churn** by making sure the current sprint is not affected by the desired change.
 - Heavy involvement in **Sprint Planning, Issue Tracking** and **Impediment Management** using **JIRA tool**.
 - Assisted **Sprint Review Meetings** by facilitating product demos and backtracking them to the requirements to determine when it is **DONE** and shippable.
 - Assisted the architect in creating **Data Models** using **Logical** and **Conceptual Entity Relationship diagrams**.
 - Normalized the data to fit into multiple **fact and dimension** tables of **Snowflake Schema** for **less occupancy** of data by considering **granularity** of data in sources. Planned and managed **end-to-end** data Integration by checking the data is structured.
 - Managed the data flow from the data stream after extracting and made sure it is deduplicated and cleansed before transferring.
 - Facilitated Developers in **Creating Staging Area, Source, Target Databases for ETL** and mappings within **CAL, ACBS** and **collateral accounts** using **Informatica**.
 - Assisted in creation of **Test Cases, Test Plans and Test Scenarios** and created **Requirements Traceability Matrices**. Conducted **User Acceptance Training (UAT)** and actively participated in facilitating testing of the system during **Smoke Texting, Black Box Testing** and **Regression Testing**. Also, Created **training Scripts, training module** and **training curriculum**.
 - Created dashboards where designed interactive reporting with charts, graphics, and illustrations with tableau.
- Environment:** Scrum Framework, Balsamiq, HP ALM (11.0), HP QC (11.0), Microsoft Visio 2016, Talend (7.1.1), ODS, Power BI (2.59.5135.101).

5. Canara Bank

Mar 2017 – Aug 2018

Product Owner

Hyderabad, Telangana

The scope of the project was to enhance ACH to new powerful **Same Day ACH** transaction processing. The proposed solution will enable the option for same-day ACH payments, for credit entries, through new **ACH Network functionality**, without affecting existing ACH schedules. In following **NACHA's** proposal, batch files would be processed on the same day through two new clearing windows. This transformative development shall drive efficiencies and reduce costs in payables and receivables processes.

- Elicited requirements using **Joint Application Development (JAD) sessions**, **Survey/Questionnaire**, **Interview sessions**, **Focus Groups** and analyzed the feasibility of the requirements and conducted **GAP Analysis** to derive requirements for **ACH processing**.
- Interacted with **SME's**, recorded the requirements in a format that can be understood and reviewed by both Technical and Business teams.
- Prepared **low and high-fidelity wireframes** along with **mockups** using **Balsamiq Mockups** to present to **end-users** & elicit feedback for further enhancement up to their interests.
- Ensured and supported in providing consistent information to the project Portfolio Management community.
- Created **UML diagrams Use Case, Sequence** and **Activity** along with **Business Flows** and **BPMN** in Lucid chart.
- Conducted structured walkthroughs using workflow diagrams to **identify, understand** and **conduct process analysis** for the **BPR**.
- Helped **Product Owner (PO)** break down **Epics** and **Features** into **User Stories** using **Horizontal** and **Vertical Slicing**. Worked with development team in proposing, negotiating **Definition of Done & Acceptance criteria** for Potentially Shippable Product Increment (**PSPI**).
- Used **JIRA** for writing **user stories** and maintained all the issues with **Issue Traceability Matrix** by linking the information in **Jira Issues**.
- Maintained **Product Backlog Items (PBIs)**, **defects** by prioritizing & **tracking** using **JIRA**.
- Formulated various **charts, reports, dashboards** for **Business Analysis** in **Tableau BI**.
- Worked with the Product Owner during the **Sprint Review Meeting** for the **Potential Shippable Product Increment (PSPI)** and help decide which features meet **Definition of Done (DOD)** and satisfy **Acceptance Criteria**.
- Collaborated and helped Product Owner (PO) to develop **MVP** with features enough for initial review after product grooming.
- Assisted **Data Modeling** process by helping architect in creating **Conceptual** and **Logical ER diagrams** and designing **database schemas** to help development of an optimal **Data Warehouse Structure**.
- **Integrated** various **OLTP** to the **OLAP** to analyze data using **Informatica** as an **ETL tool** and used **SSRS** as reporting tool.
- Assisted in increasing **Data Integrity** by performing **Data Normalization** and adding **Data Verification** and **Validity** to maintain accuracy and effectiveness of data.
- Fomented the **SQL queries** of unions, joins, aggregation, order by and group for analyzing the data from different data sources.
- Supported the **QA** and **Development teams in execution and preparation** of test documents like **Test Plans, Cases, Scenarios** and tracked them to **user stories** with help of **Requirement Traceability Matrix (RTM)**, and also worked closely with QA in reviewing and making sure that all test cases are covered and to understand the product functionality, customer expectations and dependencies.
- Extensively involved in the **User Acceptance Testing** phase to ensure the requirements and functionality of the system was in accordance to the users and their feedback was incorporated where I helped them in actual execution of UAT and documented them.
- Knowledgeable in Agile techniques such as **Test-Driven Development (TDD)**, **Continuous Integration**. Assisted tester in improving, altering and running both Manual and Automated Test Scripts with Automation tool **Zephyr** which is linked to the issue tracking tool **JIRA**.
- Conducted **Risk analysis** as required by **NACHA** and maintained a **Risk Register**.
- Presented various Key Performance Indicators (KPI) by generating **reports** using **Prezi Business** for **presentation** and **Power BI & Tableau** software's for Analysis & Visualization. Timely tracked **evolution** of software build, integration of individual components and reported to the **key stakeholders and Project Manager** through collaborative online tools like **JIRA, Confluence**.

Environment: Scrum Framework, Balsamiq, Lucid chart, MS SQL server 2012, JIRA (8.4.8.4.3), Tableau (2019.2), Informatica, Zephyr, Confluence.

6. South Indian Bank

Feb 2016 – Jan 2017

Sr. Business Analyst

Chennai, Tamilnadu

The scope of the project was to comply with the evolving CCAR norms by enhancing technology to provide a centralized platform for data analytics. The project enabled the automation of the data management challenges inherent in CCAR and compliance with the need for granular, quality, and reconciled data. It supported the total data needs of the CCAR process.

- Worked with the Product Owners and Project Manager on defining the project's detailed scope.
- Conducted **Joint Application Development (JAD) sessions** with **Subject Matter Expert (SME)** to elicit the requirements.
- Responsible for creating **UML diagrams Use Cases, Data Flows, Activity Diagram, sequence Diagram and Class Diagram** in order to capture the dynamic behavior of different applications.
- Responsible for creating, refining, and maintaining **User Stories** and associated **Deliverables** such as **Process Flows** and test cases to meet the development and stakeholder needs. Assisted the **Product Owner** in writing the **Acceptance Criteria** for the User Stories.
- Worked with the product owner and other **BAs** on the prioritization of the **Product Backlog Items (PBIs)** of the User Stories.
- Documented **Test Plans and Test Cases** for **User Acceptance testing (UAT)** scenarios with the help of QA teams.
- Helped the testers in performing pre-UAT testing to ensure defects are identified and closed prior to the Use Acceptance Test (UAT).
- Prepared **Requirement Traceability Matrix** to track the requirements and interacted with QA team to ensure quality of software.
- Used **HP/ALM** for Requirement Management, Requirement Analysis and also to track and report the defects and any requirement changes.
- Provided clear and consistent information about project status to business stakeholders for their information

Environment: Scrum, MS project, HP/ALM (v11.0), MS SQL 2008, RDBMS, Smart Draw, Oracle Data Integrator (12.2.2.1).

Business Analyst**Chennai, Tamilnadu**

Sahara Housing and Finance is a mortgage brokerage company which offers various personal and commercial mortgage loans. The project provided solution to streamline firm's **Mortgage Application** and approval process with end-to-end functionality that is affordable and easy to use. This online loan application solution would collect minimum amount of information from customers to support its various loan origination channels. The web based system with back-end processing and underwriting technologies used by Sahara Housing and Finance has total re-engineered its existing mortgage application process.

- Acted as a proxy Scrum Master by facilitating daily scrum meetings, sprint planning, sprint review and sprint retrospectives, also involved in calculating the velocity and capacity calculations with the help of Product Owner (PO).
- Conducted **Joint Requirement Planning (JRP)** to handle requirement conflicts.
- Performed **Gap Analysis** to derive requirements for the proposed systems enhancements to the existing system.
- Worked with stakeholders and Product owners to **prioritize the requirements** using **MoSCoW technique** for the sprints.
- Wrote and executed complex **PL/SQL queries to retrieve data using Joins, Nesting and Sub-queries**.
- Directed and managed the **Change Control** process for the project by facilitating group meetings, one-on-one interviews and correspondence through emails with work stream owners to discuss the impact of change requests on the project.
- Maintained documents for change request and implemented procedures for testing changes.
- Maintained **Requirement Traceability Matrix (RTM)**. And also worked closely with **SME's** team to adhere to all AML audit principles.
- Managed resolution of project issues and conflicts throughout the **System Life Cycle**.
- Assisted in **UAT** activities and necessities with business, development, and production groups.

Environment: Scrum, JIRA (8.2), PL/SQL, Oracle database, Apache HTTP server, Next generation Firewall, confluence, Power BI.
