- Proficient in Business Process Design (using Wireframe, Balsamiq, Adobe XD)
- Expert in writing and interpreting User Stories and Epics
- Expert in creating workflow process diagrams, Mock-ups, and Use Cases using Smartsheet, Draw.io
- SDLC documentation using Agile tools such as Pen, Azure DevOps, Confluence, and/or Jira
- Expert in developing and configuring technical documents on the structured content authoring (SCA)/ component content management (CCM) and HR systems such as SAP, Workday, and ADP.
- Good working knowledge of SQL, JSON, and Python

EXPERIENCE

CAPIO GROUP,

Consultant to California Environmental Protection Agency, Office of Environmental Health Hazard Assessment (OEHHHA)

Sr. Business Analyst

Sacramento, CA
02/2024– Present

- Facilitate design and technical discussions between stakeholders, clients, and managers to gather requirements
- Fulfill all requirements of Project Approval Lifecycle (PAL) Stage 1, 2, 3, and 4.
- Schedule and facilitate meetings, Joint Application Development (JAD) sessions, or other communications essential for the successful completion and approval of the project.
- Gather and analyze requirements to re-engineer existing business processes.
- Operate under the direction of the Program Manager while maintaining close collaboration with the vital stakeholders.
- Create/update an overall engagement plan and strategy.
- Identify meaningful gaps, unknown policy areas, unknown stakeholder populations/needs, and identification of unknown or minimally documented technologies – both primary, interfacing, and exchange.
- Contribute to the creation and assist in maintaining the project schedule throughout the life of this project term to ensure tasks, activities, milestones, and deliverables are properly documented, updated, and completed on time.
- Collaborate and provide project team weekly status updates and monthly status updates to the Executive Steering Committee.
- Facilitate communications and lead meetings with stakeholders throughout the project to gather requirements, elicit feedback, and share status updates.
- Maintain and continually update project assumptions, a risk register, issues log, decisions log, and keep project documents up to date with each subsequent finding made throughout the engagement.
- Develop and configure technical documents on the content management system (CCM) to publish outputs, translation status, etc.
- Manage Salesforce requests and resolved daily usage issues, reducing the median time to resolution by 25%

- Create workflows for clients to help quicken their product development timelines
- Evaluate data to generate weekly data-based reports to provide key insights to clients
- Develop and maintain Salesforce data architecture, including custom objects, fields, page layouts, and validation rules, resulting in a 15% decrease in data duplication.
- Manage Salesforce administrative configurations, user profiling/roles, and security settings for all users
- Analyze Knowledge Management trends and derive actionable steps to address improvement opportunities.
- Provides client support for the definition of Knowledge Management process metrics
- Analyze data to demonstrate effectiveness and to improve the Knowledge Management process.
- Conduct presentations/discussions with users to gather business needs.
- Met regularly with external and internal stakeholders to understand the company's plans for the products.
- Analyze the current state and design workflows for the future state of the application after migration using MS Visio
- Create product plans and user stories based on business and customer requirements.
- Participate in the whole Software Development Lifecycle - code, test, debug, document, implement, and maintain software applications.
- Ensure system improvements are successfully implemented.
- Analyze functional requirements and translate business requirements into technical specifications.
- Suggest technical alternatives and improvements to streamline processes and systems.
- Train/assist functional QA in developing their automation skills to meet automation requirements.
- Develop with an Agile framework with multiple services and components hosted in SharePoint, and in a Microsoft Word Add-In.
- Prioritize deliverables throughout the Software Development Life Cycle (SDLC) using Agile methodology through sprints.
- Create Scrum Artifacts to provide project details, like Product Backlog, Sprint Backlog, and Burndown Charts.
- Design product features and enhancements that improved production performance by 25% and significantly reduced error rates for basic use cases.
- Collaborated with team members to coordinate product release activities across multiple teams, enabling the release to ship ahead of schedule.
- Develop quality measures and procedures for improving bug testing and reporting, and evangelize them within the division.
- Assist the team in gathering and analyzing project requirements and documenting the information.
- Analyze, planned, and prepared data reports using MS Excel.
- Work on lookup tables to locate the desired value stored in them using the V Lookup function.
- Track and monitor open issues and document progress reports monthly.
- Work closely with the project management team on several projects before and after initiation, prioritizing defects, measuring, and supporting client service impact.
- Perform automation of testing procedures, which led to decreased human interaction and efforts.
- Develop key functional and technical procedures to automate and optimize functions, streamlining critical processes, increasing efficiency by 50%.
- Develop and review SQL queries with the use of join clauses (inner, left, right) in Tableau Desktop to validate static and dynamic data for data validation.
- Supervise Functional Requirements Specifications (FRS) based on user requirements.
- Present a Sneak Peek material that analyzes the risks and highlights the benefits of the new application to users.
- Mentor and created the training guide for business users to walk them through software updates and enhancements.
