

Sai Krithika

☎ 512-890-5056 / Employer: Amy - 908-829-8998

✉ krithikas897@gmail.com

PROFESSIONAL SUMMARY:

- Skilled Business Data analyst with 9+ years of experience in collecting, organizing, interpreting various types of data, evaluating past and current business and executing facts with the primary goal of improving decision-making processes within organizations.
- Experience in data analysis, manipulation, visualization and reporting using Power BI and Tableau to access, read, manipulate, analyze data stored in a database and create reports and dashboards to generate useful insights to drive an informed decision-making process.
- Hands on Experience in Design, development and implementation of MS Excel/VBA based applications
- Hands-on **Deploying reports, creating report schedules, and subscriptions**. Managing and securing reports and Proficient in MS Office includes **MS Excel, creating spreadsheets, graphs, and dashboard reports**.
- Substantial experience analyzing data for business performance insights using advanced MS excel vlookups/pivots, and importing/formatting/querying/summarizing data using MS access suites
- Good understanding of other SAS procedures like report, tabulate, summary, sort, transpose, format, frequency etc.
- Experience with Software Development Life Cycle (SDLC) using Agile and Waterfall methodologies.
- Experience in development process of big data analytics projects from planning, requisite gathering, design and development to testing and production
- Adept in Data analysis procedure; needs assessment, proof of concept, data collection, evaluation, formatting, model development, and testing
- 6+ years of experience in leading CRM projects and ERP
- knowledge in finance, computation, mathematics and programming
- Programming experience with Python, R
- Hands-on **Deploying reports, creating report schedules, and subscriptions**. Managing and securing reports and Proficient in MS Office includes **MS Excel, creating spreadsheets, graphs, and dashboard reports**.
- Created different reports in Power BI Desktop and publish to **Power BI** online and developing complex **Power BI** dashboards in Power BI Desktop. Import data from the different data source to create Power BI reports and dashboards
- Energetic storyteller and confident communicator who aims at maintaining regular communication with the ability to convert data into meaningful insights in a way that is clear, efficient, and beneficial for end users/stakeholders.
- Relish experience in independently handling design, development, documentation, and testing phase in an **AGILE** environment.
- Well versed with SOLID principles and patterns – SRP, OCP, LSP, ISP, DIP
- Knowledge and 6+ years of experience in all aspects of RTR, PTP and OTC
- In-depth experience of Transact-SQL (**DDL, DML, DCL**), **Designing**, and **Normalization and Denormalization** techniques on the database tables.
- Excellent experience in developing complex **Stored Procedures, Views, and Indexed Views**.
- Good experience in creating User Defined Functions and Triggers in observing Business Rules.
- Expertise in Configuring and managing data sources, data source views, dimensions, mining structures, roles, and creating hierarchies using SSAS.
- Expert in all areas of SQL Server development including **tables, user functions, views, indexes, Stored procedures, functions, triggers, clustering, T-SQL, relational database models, data dictionaries, data integrity, data import/export, cursors, and constraints**.
- Developed complex stored procedures and Queries for implementing business logic and process in the backend, for **data extraction, reports**, and other client interfaces.
- Good experience building star schema and snowflake schema depending on the business data requirements.
- Experience in MS SQL Server development including **DTS, Microsoft Analysis Services, Performance Tuning, Reporting, Designing, logical/physical database troubleshooting**.
- Experience in **Extracting, Transforming, and Loading (ETL)** data from **Excel, Flat file, Oracle** to **MS SQL Server** by using **BCP** utility, **DTS**, and **SSIS** services.
- Experience in building Data Integration and Workflow Solutions for data warehousing using SQL Server Integration Service (**SSIS**).

- Experience in the integration of various data sources like SQL Server, Salesforce, Oracle, Access DB, Flat File, and Excel File.
- Experience in design and implement processes for **deploying**, managing, and extracting data for reporting using SQL Reporting Services SSRS.
- Hands-on experience in star schemas, **snowflake schemas**, **dimensional modeling** and reporting tools, operations Data Store concepts, **Data Marts**, and **OLAP technologies**.
- Good experience in defining, developing, and deploying **Star Schema**, **Snowflake Schema**, and Dimensional Data modeling, **cube designing** using MS SQL Server Analysis Services (**SSAS**).
- Hands-on **Deploying reports, creating report schedules, and subscriptions**. Managing and securing reports and Proficient in MS Office includes **MS Excel, creating spreadsheets, graphs, and dashboard reports**.
- Good Knowledge in developing complex **Power BI** dashboards in Power BI Desktop.
- Experience in creating Report Models for building Ad hoc reports using SSRS and Power BI.
- Expertise in creating reports from **importing, Direct Query, and Live data** from several data sources using Power BI.
- Energetic storyteller and confident communicator who aims at maintaining regular communication with the ability to convert data into meaningful insights in a way that is clear, efficient, and beneficial for end users/stakeholders
- Flexible and versatile to adapt to any new environment and work on any project.
- Well versed with technical and knowledge of the entire Maximo tool in depth-depth experience in all modules like Asset, PM, Work Order, Purchasing, Locations, Database Configuration, Inventory etc.
- Experience in Integrating RFID systems with other technologies and software, such as barcode systems, inventory management systems, and data analytics tools.
- Well versed with RFA and experience in the healthcare domain.
- Good knowledge in Health Insurance Domain
- Worked with HL7 and FHIR
- Experience in Business Requirements Gathering
- Experience as Adobe Workfront analyst
- Knowledge in Cisco Domain
- Data Marketplace refers to a platform that allows organizations to buy and sell data assets from each other. It enables companies to monetize their data and provides access to a wider variety of data sources.
- Data asset creation involves the process of creating new data assets or improving existing ones to meet specific business requirements or to generate value. This may involve data collection, cleaning, analysis, and modeling.
- Metadata management involves the process of creating, storing, and managing metadata, which provides information about the data assets, including data structure, data quality, and data lineage.
- Data catalog is a system that helps users discover, access, and understand data assets within an organization. It provides a centralized repository of information about data assets, including metadata, usage information, and data lineage.
- Having experience with data marketplace, data asset creation, metadata management, and data catalog can be a huge plus for a data analyst or any professional involved in managing data assets. These skills can help ensure that data assets are effectively managed, easily discoverable, and meet business requirements.
- Good knowledge knowledge on Healthcare (Payer) industry and ability to analyze large and complex Payer data - Membership and Claims
- Hands on experience with AWS functions
- Good knowledge and experience with penCV, Scikit-image, TensorFlow, Torch, Pillow, numpy, pandas, scikit-learn.
- Proficient in data profiling, cleansing, and integration techniques for master data management as well data governance.
- Strong understanding of data governance principles and compliance requirements.
- Skilled in using MDM tools and technologies, such as SAP Master Data Governance, Informatica MDM etc.
- Hands on experience with MPP (Massively Parallel Processing) database system for efficient data management, processing, and optimization of queries.

SKILLS:

Microsoft Office, Google Suite, Oracle DBMS, PostgreSQL, MySQL, SQLite, Snowflake, JIRA, Scrum, Agile Project Management, SQL, R Studio, Python, Tableau, SAS, Elastic Search, MS Dynamic 365, Power BI, D365 CRM, Data Analysis, Data Governance, MDM, Machine Learning, Kibana, ETL, SAP/Business Objects, Data Mining, Maximo,

Kanban, SAFe. WCAG-2.1, Penrad, GCP, Nuance Powerscribe, Adobe, Workfront. EPIC HER, Qlik, UAT, E-Discovery, TIBCO, SFDC, Pega, CCW, RedShift, Glue, Hive, Hadoop, Informatica ETL with AWS functions, Jenkins, Kafka, MongoDB, ScyllaDB, MongoDB Query Language (MQL).

PROFESSIONAL EXPERIENCE:

Whirlpool Corp, Remote
Business Data Analyst

Nov 2021 – Present

- Conduct **Elaboration sessions** with Business SME's to understand the conversion specific requirements, design of Legacy system.
- Assisted in querying and analyzing data stored in MongoDB and ScyllaDB.
- Collaborated with cross-functional teams to gather and interpret data requirements.
- Utilized Python for data cleaning, transformation, and statistical analysis.
- Conducted regular database queries and performance tuning in MongoDB and ScyllaDB.
- Developed and maintained automated reporting processes for key performance indicators.
- Implemented and maintained API integrations for diverse data sources, optimizing data retrieval processes.
- Collaborated with development teams to ensure seamless data flow between systems.
- Utilized Python and SQL for data extraction, transformation, and loading tasks.
- Led the integration of third-party APIs into the data ecosystem, ensuring data accuracy and integrity.
- Developed custom scripts for automated data synchronization, reducing manual workload by 30%.
- Worked closely with stakeholders to understand data requirements and implemented tailored solutions.
- Participate in **Solution Validation workshops** to gather requirements, estimate work, document user stories for the development team.
- Developed and designed Power BI graphical and visualization solutions with business requirement documents.
- Generated Ad-hoc reports in Excel Power Pivot and shared them using Power BI to decision makers for strategic planning.
- Implemented several DAX functions for various calculations to facilitate effective data visualizations in Power BI.
- Use **JIRA Scrum Board to create Epics, User Stories, and Task to align into Sprints and Agile Methodology**
- Conduct meeting with stakeholders to **prioritize user stories/tasks** as per the business need
- Map Source to Target data elements after extraction of data to ensure reconciliation and accuracy of data in **PolicyCenter for Data Conversion**
- Define the Source Data Extraction (**SQL**) filters to extract the latest Policy information that will get converted from Source System to Guidewire Policy Center for entities like **Address, Coverages, Contact, Prior Policy, VIN, Modifiers**.
- Define **Data Cleansing** Rules using **SQL** for all the entities and define **Data Profiling** Rules to identify data quality issues for all related entities.
- Define **Transformation Logic** in **ETL** aligning with the business requirement for Policy Related Entities in the Mapping Document.
- Used Tableau and SQL queries for visualizing data accessed through SQL server and presented to various stakeholders
- Ensure to capture all the data elements required for **rating** the policy and ensure premium is same
- Help offshore builds **understand the ETL logic** to pull data from Policy Billing databases into the Data Warehouse.
- Analyzed the new Change Request (**CR's**), performed Impact analysis on how the data flow would be affected due to the change
- Validate Legacy Source Data to align with Policy Center Business Rules through **SQL** queries.
- Perform **Impact analysis** using query tool like **SQL** to identify the issues and provide root cause analysis
- **Conduct walkthrough and review sessions** with the client SME's for the ETL design
- Provide **support for Component Integration testing, System Testing**.
- Write Unit test cases and execute to mark the development complete before moving code to QA environment
- Involved in gathering, analyzing and documenting business requirements, functional requirements and data specifications for Business Objects Universes and Reports.
- Creating and Maintaining Solutions Specifications Document, Release Notes

- Created and obtained Business Stakeholders sign off on Business Process Flows
- Involved in Requirements meetings, gathering requirements and obtaining sign off from the Stakeholders
- Developed functional requirements in order to fulfill the business requirements
- Conducted full system testing with functionality.
- Good Understanding of state and federal insurance regulations, including the Affordable Care Act (ACA), HIPAA, and ERISA.
- Worked with data relating to the different types of health insurance products, such as individual and group health insurance, Medicare, Medicaid, and supplemental insurance.
- Assist legal teams with the development and implementation of effective data using E-Discovery
- Reviewed documents and managed the full litigation life cycle, including eDiscovery and document reviews
- Consulted with attorneys, legal teams and clients to develop identification, preservation, and collection protocols in connection with litigation and regulatory administration matters.
- Worked with CCW (Cisco Commerce Workspace) to manage the entire sales cycle, from quoting and ordering to reporting and tracking.
- Used Install Base (IB) refers to the inventory of all installed Cisco products at a customer's location to ensure up to date with the latest security patches and software updates.
- Analyzed and interpreting data related to the Cisco Commerce Workspace (CCW) platform such as collecting and analyzing data on customer orders, revenue, and product trends, as well as identifying opportunities for process improvements and optimizing the user experience.
- Implemented and customized MS Dynamics 365 modules, including Sales, Customer Service, Marketing, and Finance, to meet business requirements and enhance operational efficiency.
- Led end-to-end MS Dynamics 365 implementation projects, collaborating with cross-functional teams to ensure successful deployment and user adoption.
- Developed and maintained MS Dynamics 365 workflows and business process flows to streamline operations and automate key business processes.
- Configured and administered MS Dynamics 365 security settings and data access controls, ensuring data integrity and compliance with organizational policies.
- Leveraged MS Dynamics 365 reporting and analytics capabilities to generate insightful dashboards and reports, providing stakeholders with actionable insights for data-driven decision-making.
- Worked with Informatica MDM solution for data management, including data profiling, data quality, and data integration.
- Worked with SAP MDM to help organizations manage master data, ensuring data consistency and accuracy across various SAP applications.
- Data Governance Framework: Understanding of data governance principles, policies, and procedures within the organization and good knowledge of data stewardship and data ownership roles.
- Familiarity with data privacy regulations (e.g., GDPR, CCPA) and industry-specific compliance standards further ensuring that data practices align with regulations.
- Data Governance Framework: Understanding of data governance principles, policies, and procedures within the organization and good knowledge of data stewardship and data ownership roles.
- Worked with large datasets containing healthcare information, such as patient records, billing data, clinical outcomes, and involved in data cleaning, integration, and ensuring data accuracy and security.
- Involved in analyzing clinical data to identify trends, patterns, and anomalies to aid healthcare providers in making evidence-based decisions for patient care, treatment protocols, and quality improvement initiatives.
- Used 3M's healthcare analytics to analyze data to understand the health needs and risks of specific populations, enabling healthcare organizations to design targeted interventions and preventive strategies.
- Gathered and analyze data related to supply chain processes to identify areas that needed improvement and make data-driven recommendations.
- Created process maps and flowcharts to visualize the current supply chain processes and helped in identifying bottlenecks, inefficiencies, and areas for improvement.
- Developed and maintain key performance indicators (KPIs) to track the performance of the supply chain to further assess the effectiveness of process improvement initiatives.

Highmark Health, PA
Data Analyst

July 2019 – Oct 2021

- Prepared weekly data quality review checks and presentations, and highlighted metadata metrics using advanced SQL querying and transaction data manipulation using T-SQL and conditional statements

- Monitored and enhanced automation of reports created using Tableau and export where data is evaluated and summarized using sorting/summarizing/freq/means statements in SQL and made extensive use of PostgreSQL
- Decreased execution time and improved efficiency using SAS macros and creating classes in python, and improved operational efficiency of systems. Used API like Spark and PySpark to monitor data requirements and requests
- Performed data analysis using python SQLite, MySQL and presented results to business development team
- Built and maintained python models. Performed code reviews, data checks, bug fixes, and analyzed execution plans
- Used Tableau and SQL queries for visualizing data accessed through SQL server and presented to various stakeholders
- Hands-on **Deploying reports, creating report schedules, and subscriptions**. Managing and securing reports and Proficient in MS Office includes **MS Excel, creating spreadsheets, graphs, and dashboard reports**.
- Collaborated with the team by utilizing tools like Jira, Slack, Outlook, Google Hangouts to facilitate team meetings and seamless collaborations
- Worked on large SQL Datasets, to create new Power BI Reports and Dashboards.
- Major responsibility to take care of audits of the accounts of users associated with our Project.
- On receipt of ad-hoc requirements, worked on understanding the requirement of the user/product owner, the existing datasets, understanding the various views to be able to extract the necessary data for the reports and dashboards.
- Worked majorly on POWER BI to create visual, interactive objects on a sheet and grouped them for a dashboard, creating visuals to drill down or drill through where a user can see detailed information.
- Work on bi-monthly presentations for the Director to showcase the progress of the team.
- Create DAX functions using Filter, Mathematical, Logical, Statistical, and Date Time functions to use in Power BI reports.
- Used Power BI Gateways to keep all the dashboards and reports up to date and set up a daily refresh.
- Data reporting, visualization, and sharing using SAP/Business Objects
- Responsible for designing and development of reports and dashboards from SAP(4.2V & above) BI/BW and the relational data sources from the warehouse.
- Closely worked in migration, working and implementation of Business Objects Enterprise Reports.
- Designing and development of reports and dashboards from SAP BI/BW and the relational data sources from the warehouse.
- Set up full CI pipelines to facilitate development of standard process of software life cycle and testing before making it to production.
- Analyzed and created Business Intelligence reports in SSRS, MicroStrategy according to business requirements.
- Worked on building functional product expertise to deliver effective Workfront solutions to clients. •
- Gathered requirements on Workfront implementations and leading Workfront discussions with business teams.
- Worked with EHR (EPIC) to conduct clinical data analysis, quality measurement, performance monitoring and research streamlining clinical workflow, improve patient care and safety, and increase overall efficiency.
- Analyzing large and complex data sets related to healthcare payer operations includes analyzing Membership and Claims data to identify patterns, trends, and insights that help improve operational and financial performance.
- Analyze claims data to identify trends in healthcare utilization and cost payers to better understand risks and develop more effective strategies for managing them.
- Conducted in-depth analysis of pharmaceutical data, including drug utilization patterns, cost trends, and member behavior.
- Collaborated with cross-functional teams to develop and implement strategies for optimizing pharmacy benefit programs.
- Prepared detailed reports and presentations to communicate findings and recommendations to clients and stakeholders.
- Ensured compliance with healthcare regulations and maintained data accuracy.
- Responded to member inquiries and provided exceptional customer service related to pharmacy benefits.
- Managed pharmacy benefit projects, from planning to implementation and ongoing monitoring.

Responsibilities:

- Perform select, insert, update, delete, merge, commit, and rollback transactions using SQL Server.
- Use SQL to code program blocks, triggers, stored procedures, and functions.
- Importing and Exporting flat files using excel to SQL database.
- Design and deploy data table structures, reports, and queries in SQL Server.
- Receive and Import data from various formats into SQL Server.
- Identify and resolve database access and performance issues.
- Develop, implement, and maintain change control and testing processes for modifications to databases.
- Perform data manipulation and extraction using Microsoft SQL Server Management Studio.
- Develop complex SQL queries against various data from both internal and external sources utilizing complex subqueries, correlated queries, and nested queries.
- Analyze and interpret data by producing clear and compelling reports for different audiences which include graphs and charts. Supports business area projects by applying general knowledge of the business area processes including best practices.
- Developed complex **stored procedures, triggers, cursors, tables, indexes, constraints, views**, and other SQL **joins** for applications.
- Created **clustered /non-clustered indexes** on columns having high selectivity, and low density to speed up the execution of data retrieval queries and stored procedures.
- Maintained the table performance by following the tuning tips like **normalization**, creating **indexes**, and collecting statistics.
- Performance tuning of **SQL Queries** and **Stored procedures**.
- Used **Triggers** to generate customized error messages.
- Create **joins and subqueries** for complex queries involving multiple tables.
- Managing of users including creation/alteration, the grant of system/DB roles, and permission on various database objects.
- Taking Database Backup, Transaction log backup & differential backup in daily routine.
- Traced long-running queries and deadlocks using SQL Profiler.
- Used **Execution Plan, SQL Profiler**, and **Database engine tuning advisor** to optimize queries and enhance the performance of Databases.
- Experience in Azure SQL Databases and Azure SQL Data warehouses and SQL Serve
- Automated Stored Procedures to load data into staging and production environments promptly using SQL Server Agent Environment.
- Developed Excel based application to move/format data between sheets and selection criteria using Excel Object Model, VBA, events Combo boxes.
- Converted Excel formulas into VBA code including vlookup and hlookup
- Involved in Full-Term implementation EAM Maximo project with clients
- Integrated Informatica Power Centre v9.1 for data migration and created solutions based on utilizing Maximo Integration Framework and Maximo Business Object customizations.
- Worked with RFID ERP system integration, POS, Inventory control, Loss prevention and database development
- Training users and conducting user acceptance testing.
- Staying up to date with advancements and trends in RFID technology.

Responsibilities

- Monitored and trained a team of Data Specialists on data scrubbing and loading into internal system
- Worked closely with Project Management Office on various projects to meet up with project deadlines
- Identified products with high risk of loss and updated inventory using Excel and Access
- Created specialized reports in Crystal Reports to report sales summary by region Used SQL queries for data retrieval
- Importation of data into SAP for manufacturing specifications, Bill of Material (BOM), and pricing conditions
- Collaborated with the Project Management Office (PMO) on a regular basis as regards on-going projects

- Evaluated requests for material substitutions, pricing, status changes, and Bill of Material (BOM), updates in support of purchasing and procurement departments
- Maintained Material Master pricing records in SAP in order to identify discrepancies for seamless order execution
- Reviewed and approved the creation and maintenance of product Master data for all disciplines
- Utilized excel functions and formulas to perform data analysis and reporting

Future Retails, Gurgaon, India
Financial Analyst

June 2014 – Sep 2015

- Built excel based financial model, revenue and cash flow statement for PPA and P&L analysis
- Budget and Forecasting for retail: Developed the budget, balanced financial and efficiency commitments, hiring and capacity needs using SAS financial management tools and Transact-SQL
- Conducted client profitability analyses and performed financial reporting processes, stored reports on MS Access
- Analyzed product portfolio performance to identify revenue opportunities and demand planning for inventory
- Used SQL and SAS importing procedures to access and analyze data from multiple resources and clients
- Conducted due diligence for a new warehouse to save road tax and reduced transportation costs by 12%
- Managed day to day inventory operations and helped take overall sales revenue to around \$1 million.
- Identified products with high risk of loss and updated inventory using Excel and Access.
- Assisted with the automation of the finance department's manual processes by writing VBA code and using macros to speed processes and maximize accuracy.
- Created specialized reports in Crystal Reports to report financial summary metrics by region
- Used SQL queries for data retrieval Utilized excel functions and formulas to perform data analysis and reporting.
- Developed and published reports and dashboards using Power BI and writing effective DAX formulas and expressions.
- Conduct financial reporting on monthly and annual performance of clothing products for a boutique fashion company, conduct forecasting, and provide financial insights to the business intelligence team to facilitate data-driven decision making
- Perform audits on operating costs for the business and identify opportunities to reduce expenses by 15% through the outsourcing of IT processes to an external vendor.
- Providing qualitative and quantitative analysis based on the following assertions: completeness, existence, occurrence, accuracy, and timing.
- Designing and optimizing workflows and processes with the use of Kanban boards.
- Integrating Kanban with other methodologies and tools, such as Agile and Scrum.
- Import data from the different data source to create Power BI reports and dashboards
- Involved in creating dynamic well-organized, accurate, and perceptive Power BI reports/dashboards to support strategic decisions
- Defining strategy objectives, scope and CRM business requirements including initial needs analysis, project charter, vendor selection, contract negotiation, planning, resourcing, implementation and change management.
- Development and oversight of all project documentation and management processes related to ERP system implementation.
- Experience with RTR, creating function specification for BI to extract data for reporting and financial accounting.
