PROFESSIONAL SUMMARY:

- 8+ years of hands-on experience as **Senior BUSINESS analyst** with excellent skills in analyzing **various data** and **data formats** by using **Python, SQL server, power BI, Tableau** and **Microsoft Excel**.
- Demonstrated hands-on leadership working on medical devices, pharmaceuticals, and biotechnology. Built and mentored high-performing teams, delivered projects on time and within budget, while leveraging strong technical skills in data analysis.
- Successfully executed 5+ projects using **Scrum** and **Agile methodologies**, leveraged **Jira** for efficient task management and tracking.
- Utilized advanced data cleaning and validation techniques to safeguard data integrity and accuracy, upholding high quality standards for critical decision-making processes.
- Used **ETL tools** for **data migration** from cloud databases such as **MS Access** to traditional databases.
- Masterfully communicated data insights through compelling visualizations and reports, fostering data-driven decision-making across multiple stakeholders and organizations.
- Worked with a variety of tools (ex; **SQL Server, My SQL, oracle SQL, Access, Excel, Tableau, Power BI, Visio**, etc.) to access data and write queries, run reports, manipulate, and analyze large datasets.
- Utilized **MS Visio** to create **Use Case diagrams, Sequence diagrams, Activity diagrams**, and **Class diagrams** for system modeling and design.
- Applied knowledge of SQL table joins, **DDL, DML, PIVOTS** views, constraints, and functions through **SQL server**.
- Worked on **Data bricks** for data extraction, transformation and analyzing the data.
- Worked on migrating **Teradata** elements into a snowflake environment.
- Performed data analysis and data profiling using complex SQL on various source systems including **Oracle** and **Teradata**.
- Cuser stories using the **JIRA tool**.
- Skilled in data manipulation and generating customized reports with SAS data steps and procedures and have experience in handling large amounts of data for **Data Cleansing, Data Profiling and Data Scrubbing**.
- **Gathered User Requirements** and designed Source to Target data load specifications based on business rules.
- Performed risk management activities using Failure Mode Effect Analysis (FMEA) techniques to identify potential failure modes on pharmaceutical and medical device manufacturing equipment.
- Worked on applications hosted on **AWS** and **Azure cloud environments** and have good conceptual knowledge of **cloud-based tools**.
- Developed **Tableau visualizations** using the patient data to create reports and dashboards using tableau.
- Experienced organizing and attending **JAD sessions** with SME's, project manager, developers, and end users to elicit and analyze the **business requirements, functional** and **non-functional requirements**.
- Experience in design and development of various dashboards, reports utilizing Tableau Visualizations like **Dual Axis, Bar Graphs, Pie-Charts, Heat Maps, Bubble Charts, Tree Maps, Funnel Charts, Box Plots, Waterfall Charts, Geographic Visualization** and other making use of actions, other local and global filters according to the end user requirement.
- Extensive experience in creating Calculations (Hide Columns, Creating/using Parameters, Table Calculations, Totals) and Formatting (Annotations, Layout Containers, Mark Labels, Marks Card Changes, **Rich Text Formatting**,) using **Tableau Desktop**.

TECHNICAL SKILLS:

- **Computer Skills:** Data visualization, Data Cleaning, Data Mining, Data Warehouse, Microsoft Office (Access, Word, Excel, Power point, Visio), Cerner Applications such as Citrix workspace, Health Quest, Relay, Microsoft teams, problem solving and analytical abilities.
- **Analysis Tools:** My SQL, SQL server, Oracle, Tableau Desktop, MS-Excel, Power BI, R Studio, Spreadsheets, Microsoft Azure, Visio.
- **Languages:** SQL, R, SAS, Oracle SQL, XML.
- **Cloud services skills:** AWS, Google Cloud Platform (GCP), Microsoft Azure and Data Bricks.
- **Tools:** Git, JIRA, Informatica.
- **Databases:** Oracle, MS Access, SQL.
- **Operating systems:** Windows, LINUX, Mac OS, UNIX and DB2.
- **Expertise:** Strategic application of IT in healthcare, Advanced Healthcare Data Analytics, Electronic healthcare records, Information Analysis and System Design, Database Design and oracle, Evidence based Practice, Clinical and Business intelligence, Healthcare Operations, Population Health, Convergence of Healthcare and information technology and legal aspects of healthcare IT.

EDUCATION

Masters in Engineering Science, SUNY Buffalo, USA.

PROFESSIONAL EXPERIENCE:

Centene, Connecticut, US

Jun 2021 - Present

Senior Data/Business Analyst

Project Name: Optimizing Health Plan Operations Through Data-Driven Workflow Innovation

Responsibilities:

- Collaborated with stakeholders across health plan operations (EDI transaction processing, enrollment, financial reconciliation) to identify operational pain points and opportunities for improvement.
- Translated business requirements into detailed functional specifications for data extraction and transformation processes, ensuring alignment with system capabilities and regulatory compliance.
- Implemented complex ETL processes in Python and SQL Server, extracting data from diverse sources like Cerner Millennium, claims platforms, and provider APIs.
- Created business requirement documents (BRDs) and functional requirement documents (FRDs) outlining the scope, objectives, and detailed specifications in Visio to create workflows, system enhancements, and policy modifications.
- Conducted in-depth interviews with insurance regulators, consumer groups, and insurance companies to understand stakeholder needs and pain points.
- Analyzed existing data on customer demographics, risk profiles, and insurance coverage to identify trends and potential areas for personalization.
- Collaborated with stakeholders through workshops and interviews to define project requirements, user stories, and acceptance criteria for personalized coverage options developing clear workflows using Visio and Powerpoint.
- Participated in the design and development phases, ensuring data security, scalability, and adherence to best practices for data warehousing and BI architecture.
- Utilized agile methodologies like Scrum to manage project tasks, track progress, and adapt to changing needs throughout the development cycle.
- Designed a scalable and cost-efficient data warehouse in Amazon Redshift, achieving 50% reduction in storage costs by implementing data partitioning and reserved instances.
- Implemented robust security measures within the cloud data warehouse using IAM roles, S3 encryption, and audit trails, ensuring compliance with HIPAA regulations.

- Ensured compliance with HIPAA and other healthcare data privacy regulations throughout the data analysis and model development process.
- Worked with data scientists and actuaries to develop statistical models that predict individual customer risk profiles and optimal insurance coverage options.
- Analyzed the impact of different personalization strategies on insurance costs, risk mitigation, and customer satisfaction.
- Utilised Excel, adeptly created comprehensive and visually compelling reports by leveraging advanced functions, including pivot tables and charts, to distill complex data into actionable insights.
- Reviewed and provided feedback on technical designs and prototypes to ensure alignment with business needs.
- Communicated complex technical concepts to non-technical stakeholders in clear and concise language.
- Maintained regular communication with stakeholders through updates, reports, and presentations in Power BI to ensure alignment and address concerns proactively.
- Managed project timelines, budgets, and resources using project management tools like Jira.
- Identified and mitigated potential risks throughout the project lifecycle, implementing contingency plans to minimize impact on timeline and budget.
- Using Tableau, designed interactive and dynamic dashboards, employing advanced visualization techniques to present data trends and patterns in a visually intuitive manner for informed decision-making.

Environment: Cerner claims processing, SQL Server, MS Visio, MS Excel, Power BI, and spreadsheets.

Elevance, New York, US

Jan 2019

– May 2021

Senior Data Analyst

Project Name: Optimize Staffing Levels through Workforce Analytics

Responsibilities:

- Conducted in-depth workshops and interviews with nursing staff and administrators to gather detailed insights and business requirements into their needs and challenges.
- Utilized various techniques such as surveys and one-on-one sessions to ensure a comprehensive understanding of stakeholder expectations.
- Created a detailed Business Requirements Document (BRD) outlining functional and non-functional requirements.
- Accessed and extracted scheduling data from Kronos, dissecting staffing patterns to identify peak workload hours and areas requiring optimization.
- Utilized Kronos API to align staffing levels with patient demand, ensuring an optimal distribution of workload for enhanced patient care.
- Facilitated cross-functional collaboration between the data engineering team and other project stakeholders, used Lucidchart to create flowcharts showcasing an understanding of diverse data requirements and optimizing ETL processes.
- Monitored ETL processes within Snowflake, emphasizing the importance of tracking data flow, identifying bottlenecks, and ensuring the reliability of real-time analytics.
- Ensured the integration of Kronos and Snowflake met both technical and analytical needs, fostering a cohesive development environment for nurse schedule optimization.

- Worked closely with data engineering teams to understand database structures and optimize SQL queries for efficient data retrieval.
- Implemented Snowflake's security features, emphasizing data privacy and compliance with regulatory requirements for nurse staffing data.
- Developed visually compelling data visualizations and reports in Tableau to facilitate understanding and decision-making.
- Developed and maintained project plans, defining milestones, deliverables, and dependencies. Utilized project management tools such as Jira to track progress, manage tasks, and allocate resources effectively.
- Actively engaged with stakeholders through regular meetings, feedback sessions, and status updates.
- Conducted stakeholder analysis to identify key influencers and decision-makers, tailoring communication strategies accordingly.
- Participated hands-on in UAT sessions, ensuring that the implemented features met the defined business requirements.
- Used Tableau dashboards as a communication tool to present project progress, UAT results, and other relevant information to stakeholders.
- Monitored the impact of changes introduced by the project on staffing practices and patient care.
- Proactively identified project risks using Agile risk management techniques. Implemented risk mitigation strategies and contingency plans, ensuring that potential challenges were addressed before they impacted project timelines.
- Facilitated regular feedback loops with stakeholders through sprint reviews, UAT sessions, and ongoing collaboration.
- Encouraged continuous improvement by incorporating feedback into subsequent development iterations.
- Incorporated elements of the Waterfall methodology, particularly in the documentation phase.
- Ensured comprehensive documentation of business requirements, functional specifications, and testing processes to maintain clarity and traceability.

Environment: Jira, Tableau, MS SQL, Snowflake, Agile, Workforce analytics – Kronos API.

State of Virginia, VA, US

Feb

2017 – Dec 2018

Business/Data Analyst

Project: Streamlining Patient Intake and Clinical Documentation with Meditech

Responsibilities:

- Conducted stakeholder analysis, identifying bottlenecks in patient intake through interviews and data analysis.
- Designed and implemented Meditech EHR solutions, leveraging features like pre-registration modules to streamline patient registration.
- Identified a significant challenge in patient intake processes leading to extended appointment wait times.
- Conducted stakeholder analysis to understand pain points, including high patient frustration and increased no-show rates.
- Strategically selected Meditech features, considering usability and integration capabilities, to streamline patient registration and data capture.

- Collaborated with IT and clinical teams, ensuring seamless integration of new functionalities and providing staff training.
- Implemented data standardization protocols, focusing on critical patient information fields. Defined data standardization protocols through cross-functional workshops for consistent data entry.
- Developed and implemented reporting tools using Meditech capabilities, improving data accessibility.
- Conducted advanced data manipulation in Excel, employing functions and pivot tables to extract valuable insights.
- Developed and maintained detailed reports, utilizing Excel's features for efficient data organization and presentation.
- Applied transformations in SQL to ensure data quality, consistency, and compatibility with the project's analytical requirements.
- Leveraged Tableau's storytelling capabilities to effectively present complex data trends and insights to leadership and stakeholders.
- Designed the Snowflake data warehouse architecture to be scalable, accommodating the increasing volume of nurse staffing data over time.
- Applied Snowflake's data transformation capabilities within Azure to preprocess and clean extracted data, ensuring high data quality.
- Utilized Tableau for visualizing insights derived from SQL-transformed data, facilitating effective communication of findings.
- Fostered collaborative environment by building rapport with stakeholders, facilitating open communication channels, and ensuring alignment between technical and analytical needs.
- Proactively identified and managed risks and issues, ensuring prompt resolution to maintain project momentum.
- Effectively managed resource allocation through Jira, ensuring optimal utilization of team members based on project needs.
- Collaborated with IT and clinical teams to ensure seamless integration of Meditech EHR solutions with existing systems, facilitating a cohesive workflow.
- Actively participated in sprint planning sessions, defining tasks, assigning roles, and estimating effort for each development iteration.
- Ensured alignment with Agile principles, promoting flexibility and responsiveness to changing project requirements.
- Monitored the impact of changes, analyzed results, and continuously refined the staffing model for optimal performance using project management tools.
- Collaborated with clinicians, conducting process mapping and workflow analysis for documentation practices.

Environment: MS Excel, Meditech EHR, Agile JIRA, MySQL, Tableau, Snowflake

Bio Haven Health, Connecticut, US
2015 – Jan 2017

Jan

Business Analyst

Project: Patient Experience Evaluation Platform

Responsibilities:

- Implemented EMR-based care management system to track and document patient authorization for data collection and research participation, ensuring regulatory compliance.

- Contributed to the development of predictive models leveraging EHR data and patient feedback to identify patients at risk of negative experiences, enabling proactive interventions to improve satisfaction.
- Worked on streamlining our data collection processes to ensure they meet FDA regulatory requirements while also reducing administrative overhead and improving efficiency.
- Incorporated Key Performance Indicators (KPIs) related to patient satisfaction metrics, ensuring a comprehensive approach to data collection.
- Developed Business Requirement Documents (BRDs) and Functional Requirement Documents (FRDs) using SQL expertise to articulate business goals and functional specifications.
- Ensured alignment of SQL capabilities with the project's technical and functional requirements.
- Implemented dynamic DAX measures and calculated columns within the Power BI model to analyze critical endpoints and identify potential safety signals within the clinical trial data.
- Employed VLOOKUP, pivot tables, and conditional formatting to identify inconsistencies, categorize responses, and prepare data for further analysis.
- Utilized Excel formulas and functions to analyze survey responses, calculate averages, and visualize basic trends in patient satisfaction metrics.
- Designed basic Excel charts and graphs to communicate key findings from patient satisfaction data to stakeholders at early project stages.
- Used MS Word to create reports and presentations, integrating findings, recommendations, and KPI metrics.
- Applied M Query for efficient data transformation, shaping, and cleansing within Power BI.
- Automated data refresh processes using SQL expertise within the Power BI Service, ensuring continuous monitoring of key clinical trial metrics.
- Enabled real-time identification of potential risks or deviations from protocol through efficient SQL-driven automation.
- Collaborated with clinical research teams and investigators to design and implement effective data collection methodologies, ensuring data integrity and regulatory compliance.
- Presented findings and recommendations to stakeholders using interactive Power BI visualizations and clear, concise reports.

Environment: MS Excel, EMR, Agile JIRA, MySQL, Power BI.
