SNEADER SEQUEIRA

EXPERIENCED CONSULTANT IN PRODUCT
& PROGRAM MANAGEMENT

PROFESSIONAL SUMMARY

Experienced Consultant in Product & Program Management with over 15 years of expertise in project and product management. Led several large-scale initiatives spanning multiple teams and incorporating best practices in Process Management. Well versed in the best practices as a key practitioner of PMO, including SaFe, Scrum, Scrumban, Kanban & Waterfall. Launched a profitable startup with a presence in 33+ countries and 6000+ registered wineries. Worked at Sony Playstation as an AI Enabler PM to deliver experiences that lead to optimal conversions. Managed, and mentored companies of all sizes in the aspects of product development, marketing, delivery, process management, user interface and user experience, planning, go-to-market, product and brand marketing. Worked at Workday Extend as a platform PM (PaaS). Currently a board member at People to People Foundation, overseeing operations and forging new inter-agency partnerships at the local, state, and international levels.

EMPLOYMENT HISTORY

NOV, 2020 - OCT, 2023

Senior Technical Product Manager, Workday (Extend), Pleasanton, CA

Helped influence the product strategy and roadmap for the Workday Extend developer community focusing on application development lifecycle management platform. This include the tools and services external developers use to manage their Workday applications which includes storing, building, deploying, and upgrading their apps. Worked with external developers to understand their application development lifecycle and deployment needs and interact with engineers to bring the lifecycle products to life.

1. Combined technical, functional and operational knowledge of cloud services platforms to help build the next generation of PaaS developer platform and tools
2. Researched the needs of the customers (highly technical end users) and built out comprehensive documentation on user requirements, scenarios, and quality attributes
3. Combined technical, functional and operational knowledge of cloud services platforms to help build the next generation of PaaS developer platform and tools
4. Prepared and conduct interviews, contextual inquiries, focus groups and design workshops.
5. Conducted the necessary activities to ensure the engineering teams were working on top priorities.
6. Led various Scrum related meetings - Stand-ups, Backlog grooming, Risk Management Workshops, Process Improvement meetings and Product Demos
7. Coached the team on best practices, and used quantitative analysis (velocity, EVA, story pointing) to refine existing processes
8. Communicated across product teams to deliver functionality to customers.
9. Kept feature stakeholders updated throughout the development cycle.
10. Acted as a liaison to relevant parties, including development, QA, documentation, product support, and other internal stakeholders, to facilitate the release process.
11. Presented feature specifications to internal stakeholders, customers, prospects, and implementation partners.
12. Managed customer escalations and production issues, mitigating functional challenges and improving customer satisfaction.

Skills: Project Leadership · Product Planning · Product Vision · Customer Insight · Cross-functional Team Leadership · Key Performance Indicators · Business Strategy · Business Insights · Scrum · PMO · Agile Coach · Product Owner.

EMPLOYMENT HISTORY

FEB, 2019 - OCT, 2020

Senior Technical Product Manager - Intelligence Platform, Sony Interactive Entertainment, San Francisco

1. Analysed industry trends and competition to build a long term product strategy for PlayStation
2. Enabled the business team to leverage our underlying AI models to recommend content based on player profile
3. Partners with project and release managers in production deployment activities
4. Helped support short and long-term release planning, and to keep work backlog health and prepared for execution
5. Developed reports on project status, schedule, and agile metrics such as velocity and cycle time
6. Conducted Risk Analysis, Forecasting, Work Breakdown Sessions to build a comprehensive, prioritised set of initiatives with measurable outcomes.
7. Translated Product Strategy into an executable roadmap with well defined milestones that delivered measurable value-add
8. Led initiatives that helped publishers deliver engaging, personalised and contextually relevant content towards players
9. Partnered with the business team to implement a strategy that would increase monetisation through ad activation both, on and off console
10. Collaborated with customers, stakeholders, design and consumer research to build a scalable and intuitive workflow
11. Partnered with operations, legal, accounting, finance, sales, and service to design the business processes required to operationalise the platforms and products built

Skills: Project Leadership · Product Planning · Coaching · Backlog Management · Product Vision · Customer Insight · Cross-functional Team Leadership · Computer Science · Key Performance Indicators · Business Strategy · Business Insights · Defining Requirements

AUG, 2017 - FEB, 2019

Technical Program & Product Manager, Sizmek by Amazon, Redwood City

1. Researched and launched partnerships for Sizmek DSP with multiple 3rd party vendors, thereby building integrations with Peer39 and Grapeshot resulting in a positive revenue of MM annually
2. Launched robust Mobile App Targeting Capabilities at Pre-Bid level
3. Led the development of an ETL pipeline based on pipe-filter architecture that logged impression level data, CPM, and the associated targeting restrictions for multiple 3rd party Data Providers. This facilitated the Analytics team to conduct post-bid verification, as well as act as a data-source for Billing & Reporting modules.
4. Managed multiple teams to enable the successful launch of a feature that supported self-serve capabilities for Custom Keywords creation, thereby simplifying a convoluted process, resulting in a decrease of turnaround time from 2 weeks to 1 hour
5. Worked with department leaders and project sponsors to define and develop projects, establish project plans, including deadlines and priorities
6. Determined financial requirements and capabilities, including budgets and resource allocation, for forecasting
7. Supervised the PMO processes in place and suggested recommendations to ensure work meets quality standards and falls within established deadlines and budgets
8. Documented the project's progress and providing regular updates to key stakeholders
9. Ensured the efficiency of project processes, making adjustments as needed
10. Led my team to implement DSP Connect with Sizmek DSP - a single unity platform that provides the ability for advertisers to upload their placements and manage their campaigns through a single dashboard
11. Led other PMs to ensure the successful release of a new Pricing model (Transparency as a Service), thereby bumping up the revenue projection by offering a la carte options
12. Led a project that would automate and streamline the process from Contracts negotiated by legal, all the way to final generation of invoices for our clients, using different pricing models
13. Drove monetisation efforts by enabling the business to pivot towards a self serve model for managing ad campaigns
14. Built out collateral, including training videos, in collaboration with the Marketing department as part of the GTM strategy.

EMPLOYMENT HISTORY

JAN, 2017 - SEP, 2017

Technical Program Manager, Rocket Fuel, Redwood City

As a program manager:

1. Led key initiatives that affected the company's bottom line, which involved 6 Product Owners, 2 UX Teams, and 4 Engineering teams that involved 50 geographically distributed developers. The list of products launched include Top Insights, Dynamic Creative, Trend Insights & Scalability Predictor.
2. Standardized archaic engineering workflows to improve quality of deliverables and reduce the turnaround time. Kickstarted this by conducting Sprint 0 with multiple teams.
3. Identified and led the effort to realize a business opportunity (self-serve Dynamic Creative) that resulted in substantial revenue (2- 4M) for Q3
4. Coached 4 engineering teams over 6 months to enable the transition from waterfall to agile (Scrum, & ScrumBan)
5. Conducted a 6 month cross-product & engineering training that led to the adoption of JIRA from Pivotal Tracker and Trello, thereby deprecating the use of expensive API Integrations.

As a Product Owner:

1. Created well defined user stories & high fidelity prototypes in collaboration with UX Engineers.
2. Conducted market research and interviews with customers and 3rd party vendors like Grapeshot Peer39
3. Created a visual, and dynamic product roadmap through the use of Confluence, Jira, and Big Picture to enable collaboration between Sales, Marketing and Engineering teams
4. Captured and documented business interactions through the use of Sequence, Activity Diagrams & UML
5. Identifying and negotiating milestones to ensure incremental release of functionality that maximizes ROI. This helped capture revenue for brand safety segments as they were being built out.
6. Created 3 View architecture models that illustrated APIs & systemic properties using Archi3D and LucidCharts, which has proven extremely useful in determining downstream design decisions
7. Led GTM activities related to Dynamic Creative, and Double Verify Brand safety launch.
8. Employed Qualitative KPIs to help refine user interactions and workflows.

JAN, 2010 - JAN, 2017

Senior Application Engineer (including Scrum Master & Product Owner roles), Oracle America, Pleasanton

1. Created user stories with well defined acceptance criterion, supplemented by high fidelity prototypes.
2. Groomed the backlog at regular intervals based on customer and strategy feedback.
3. Interfaced with key stakeholders, like engineering, support, and strategy to define, develop and refine requirements.
4. Prepared various software artifacts like Technical/Functional Design Documents.
5. Created software architecture models, including static, dynamic, and physical views.
6. Developed Proof of Concept designs as part of risk mitigation
7. Engaged with customers during Oracle Open World.
8. Engage in discussion with the development team to ensure consistency and transparency.
9. Coached cross-functional, geographically distributed teams to adopt Scrum best practices.
10. Led daily Stand-up, Backlog grooming, Sprint Planning, Review, and Retrospective meetings.
11. Ensured project and process visibility through Confluence and customized gadgets in Jira.
12. Maximized ROI by providing assistance to other Product Owners in creating and ordering user stories. This required multiple coaching sessions to align the backlog with the sprint and project goals.
13. Measured project progress through various KPIs like team-velocity, burn-downs, sprint health bar-charts, Earned-Value analysis. Wrote custom SQLs to extract data that helped facilitate this task.
14. Conducted Risk Assessment and Management workshops that helped identify impediments.
15. Selected to lead the training for multiple teams on a proprietary tools.
16. Provided assistance to the technical writer in refining the documentation and incorporating feedback.
17. Conceptualized and developed enterprise software in the Cloud for Financial Applications and Analytics dashboards

EMPLOYMENT HISTORY

JAN, 2013 - DEC, 2015

Director, CorkSharing LLC, Dublin

- 1. Worked with board members to create a dynamic product roadmap using Big Picture based on historical performance, market analysis, current trends, competitor evaluations and A/B testing.
- 2. Effectively utilized input from customers, wineries, wine-associations and sales feedback to create an release plan that maximized ROI
- 3. Led demos at Wine Tasting events, Wine Growers Associations, Incubators, and Trade shows to promote the company brand.
- 4. Recruited designers, engineers, and content writers and managed their work to ensure that dependencies were resolved.
- 5. Created user stories and worked in close proximity with engineers to ensure that the business value and technical constraints were understood.
- 6. Elicited and prioritized requirements through use case diagrams, ERDs, and high fidelity prototypes via Adobe Fireworks and Sketch.
- 7. Pruned the backlog for the development team in order to ensure short release cycles with high value features. Employed INVEST ideology to achieve this goal.
- 8. Led Risk Analysis meetings monthly with the board and the development team. Used this to identify and mitigate roadblocks from both, a business and technical perspective.
- 9. Streamlined processes and communication methods which resulted in shorter release cycles
- 8. Recruited, coached and monitored the progress of the sales team through various KPIs.
- 10. Led the marketing campaign to build up the brand image through social media(blogs, tweets, Facebook posts), and radio shows.
- 11. Fostered new business deals by contacting potential partners and exploring opportunities

EDUCATION

AUG, 2008 - DEC, 2009

Masters in Software Engineering, Carnegie Mellon University, Pittsburgh, PA

- 1. Grade: DistinctionGrade: Distinction
- 2. Activities and societies: SEI certified
 - Process Management
 - Software Architecture
- 3. Implemented a tool for the SQUARE(Security Quality and Requirements Engineering)

Professional Scrum Master, Scrum.org

Scrum Coach Accredited Certification, International Scrum Institute™

Credential ID: 97374900277704

Scrum Master Accredited Certification, International Scrum Institute™

Credential ID: 84214313786476

Scrum Product Owner Accredited Certification, International Scrum Institute™

Credential ID: 74906879327725

Software Architecture - Best Paractices, Software Engineering Institute | Carnegie Mellon University

SKILLS

Scrumban, Kanban, Agile	Product Strategy
Analytics & Forecasting	AI Enablement
Process Management	SaFe
Leadership	Coaching
