

Theertha Praveen

Scottsdale, AZ 85250

theerthapraveen4vhgp_d63@indeedemail.com

+1(201) 877-9542

and designing User Interfaces. Highly dedicated and knowledgeable professional with a deep understanding of corporate finance, asset and wealth management, and a proven record of rapid skill acquisition, exceptional work ethic, effective teamwork, and excellent communication abilities.

- Extensive knowledge of the banking and finance domain, encompassing critical areas such as Asset Management, Wealth Management, Retirement Management Systems, and compliance regulations including Bank Secrecy Act (BSA), Sarbanes Oxley Act (SOX), Basel I, Base II, Basel III, FINRA, GAAP, IFRS, LIBOR, Regulation O, Regulation W, Regulation E, Dodd-Frank act, EFT act, Anti-Money Laundering, GDPR (General Data Protection Regulation) and NACHA.

- Outstanding proficiency in business analysis, coupled with exceptional interpersonal skills, allowing for effective communication.

- Worked with Subject Matter Experts (SMEs), Business stakeholders, Architects, Developers, Testers, and the QA Team.

- Assisted Project Managers in conducting comprehensive feasibility studies, Risk Analysis, and Impact analysis, enabling a thorough assessment of project requirements. Conducted GAP Analysis to gain comprehensive insights into the organization's existing state (AS-IS) and the desired state (TO-BE), contributing to a clear understanding of project objectives and processes. Experienced in working under various SDLC environments both traditional and Agile such as Scrum, Waterfall, Extreme Programming, Water Scrum, Safe, Kanban & Srumban with a potential to work with self and cross-functional teams.

- Extensively experienced in capturing requirements from business stakeholders by conducting requirement elicitation techniques such as JAD sessions, Workshops, Brainstorming, Interviews, Prototyping and Document Analysis, and Focus groups.

- Experienced in drafting project artifacts such as Business Requirement Documents (BRD), Functional Requirement Document (FRD), System Requirement Document (SRS), Data Mapping Document, Requirement Traceability Matrix (RTM), Change Request Document, Risk register, and helping the project manager with Project charter document, Project Plan Document.

- Experience in handling Change Request Management, effectively implemented change by performing both Business Impact Analysis and Technical Impact Analysis of the change in the scope of the project and reviewing it with Cooperative Analysis.

- Designed diverse architectural and UML diagrams in the form of process flow diagrams, swim lane diagrams, use case diagrams, wireframes, mock-ups, and prototypes using tools like Lucid Chart, and MS Visio allowing key stakeholders to comprehend the application design and define Business Process Flow accordingly and have a complete understanding of it.

- Collaborated with Product Owner, Development teams in conducting Scrum ceremonies which are Sprint Planning, Daily Scrum, Scrum Review meeting, Scrum Retrospective meeting, Sprint Zero, backlog Grooming, product vision meeting.

- Well-versed in documenting Scrum artifacts such as Product Backlog, Release Planning Document, and Sprint Backlog.

- Actively taken part in release strategy of Minimum Viable Product (MVP), Minimum

Marketable Feature (MMF), and Minimum Releasable Feature (MRF) of products into the market.

Comprehensive knowledge of creating User stories that meet INVEST

(Independent, Negotiable, Valuable, Estimable, Small, Testable), DIVE, DEEP, and

Acceptance criteria.

- Assisted project managers and product owners in outlining project action plans to capture and define project roadmap, timelines, milestones, vision, risks, and objectives using Critical Path Analysis (CPA), Work Breakdown Structure (WBS),

Earned Value Management (EVM) and Financial Analysis Models (NPV), Return on Investment (ROI).

- Assisted Product Owner in prioritizing Product Backlog using prioritization techniques like MoSCoW, KANO and also Assisted Scrum teams in estimating products using techniques like Planning Poker, T-Shirt Sizing, 100-point method and bucket system.

- Explored the Source Systems and the Target systems and gathered the required Transformation Rules for Data Migration.

- Involved in Conceptual, Logical models and created ER diagrams (Entity-Relationship diagrams) for the data modeling.

- Experience in implementation of Dimensional data modeling with Snowflake schema & Star schema, Facts and Dimensions.

- Proficient in the creation of Data Dictionary, Data Glossary, Data Mapping, and creating Data Mapping Document.

- Worked on Relational Database Management System, Data Warehouses, Data marts, Operational Datastore (ODS).

- Strong insights in Data Warehousing, architecture, implementation strategies, Facts, Dimensions Modeling, Data Marts, and Schemas, also involved in OLAP operations such as Roll-up, Drill-Down, Slicing, and Dicing, Pivot.

- Extensive knowledge of Extraction of data from source systems, Transformation of data sources into an integrated system (Transformation includes Sorter, Filter,

Source Analyzer, Aggregator, Joiner, Lookup, Stored Procedures, Source Qualifier, Expression, and Router), and load of the data into the data warehouse using Informatica PowerCenter.

- Worked with the local development team, remote application team, and database team throughout the lifecycle of project backup to migrate the server to newer enterprise version. Also worked with DBA, for network, permissions, and space-related issues.

- Skilful at designing and implementing SQL queries using Triggers, Joins (Inner Joins, Outer Joins), Unions, select within Select, Order By, Group by and Aggregate Functions to extract data from different data sources.

- Performed API (Application Programming Interface) end point validation using Postman and documentation using Swagger to capture the Headers, Query Parameters, Resources, POST/PUT response body and different error codes received.

- Well versed on web services like RESTful and SOAP API based on XML, JSON using HTTP/HTTPS under the Three-Tier Architecture, N-Tier Architecture, Service Oriented Architecture (SOA) and Micro services Architecture (MSA).

- Experience in creating Test Plan, Test Script, Test Cases, Test Scenarios, Test reports and assisted the QA team in Functional Testing, Regression Testing,

Security Testing, Load/Stress Testing, Performance Testing, Smoke/Sanity testing.

- Experience in Creating Test plans/Test case for UAT, also Facilitated and Conducted User Acceptance Testing (UAT).

- Worked on JIRA for Reporting and used for bug tracking, issue tracking, and project management and work overview.
- Worked on Confluence for reporting and capturing project requirements, assigning tasks, and managing calendars at once.
- Used Tableau as a BI tool for generating Analytical Reports required for the project for further analysis.

Work Experience

Sr. Business Systems Analyst

Vanguard - Scottsdale, AZ

December 2021 to Present

This project intended on developing and improving an existing Retirement planning portfolio management service by developing machine learning models, diversification of investment options, utilizing the historical and real-time customer transactional data which examined each financial transaction to provide personalized recommendation and revamping the UI by adding customizable widgets in the portfolio dashboard. Thereby increasing the financial performance of the company, customer satisfaction rate and customer engagement.

Roles and Responsibilities:

- Conducted in-depth domain analysis to gain knowledge of financial, banking software systems and retirement planning.
- Implemented and adhered to technical compliance measures encompassing data privacy, financial regulations, risk management, UI accessibility, industry standards, ethical practices, customer consent, and audit reporting to ensure regulatory compliance, protect customer data, mitigate risks, provide inclusive user experiences, uphold ethical standards.
- Ensured I gained knowledge in compliance with GDPR (General Data Protection Regulation) guidelines to safeguard customer transactional data privacy, while also adhering to SEC (Securities and Exchange Commission) regulations for maintaining compliance with financial industry standards and guidelines in the context of retirement planning and portfolio management.
- As a part of the requirement gathering process, I conducted elicitation techniques like questionnaires, surveys, brainstorming sessions, document analysis, prototyping, and interviews with subject matter experts (SMEs), portfolio managers.
- Conducted As-Is analysis, identified gaps, and performed To-Be analysis for an existing retirement portfolio management service, leading to the development of advanced machine learning models and enhanced UI resulting in improved financial performance, customer satisfaction. Conducted cost-benefit analysis to demonstrate the feasibility and return on investment.
- Worked with the development team to create mock-ups, wireframes, or UML diagrams using Lucid chart and MS Visio that illustrated a blueprint that captured the essence of our idea and the envisioned system architecture, design and data models.
- Performed velocity or capacity planning as required. Tracked progress by creating sprint burnup charts and product burnup charts. Conducted Scrum ceremonies (Sprint Planning, Daily Scrum, Sprint Review, and Sprint Retrospective). Defined the Definition of Ready (DOR) and Definition of Done (DOD). Used a prioritization technique (MosCow) and an estimation technique (Planning Poker) for backlog refinement Conducted time-boxed daily standups in the absence of scrum master.

- Facilitated efforts which led to the identification of the MVP/MRF and aided in developing a roadmap for the different features. Assisted the product owners and Subject matter Experts of teams to get SWAG estimates to enable release planning.
 - Created multiple estimable user stories following INVEST criteria using Jira and supported the creation of acceptance criteria and used SMART criteria to convert a story to "Done." Assisted the Product Owner in vertically slicing user stories.
 - Helped data scientists in collecting, processing and analyzing real time data using Amazon Kinesis Data Streams and cleaned, transformed the data with Amazon Glue which was streamed to AWS Sage Maker for real-time predictive analysis. We stored the above data in Amazon S3, and we stored the structured data from the AWS Sage Maker in Amazon DynamoDB.
 - Assisted the data scientists in designing and developing machine learning models (Decision trees and Random Forest) using AWS Sage Maker that could provide personalized recommendations by analyzing historical and real-time transactional data.
 - Designed and implemented a Relational Database Management System (RDBMS), ensuring efficient data storage, retrieval, and management. Utilized SQL and database modeling techniques to optimize data integrity, performance, and scalability.
 - Created API Documentation using Swagger for the testing team. Used Amazon API Gateway to connect Cloud data. Used content like Authentication, Endpoints, example request, and response for creating API document. I conducted tests on the CRUD operations (GET, PUT, POST, and DELETE), to ensure that they performed as expected. I tested these operations in both production and development environments to identify any discrepancies that may occur in different environments. I also verified the response time for each request and also error codes were responding efficiently and provided error messages to users.
 - Collaborated with cross-functional teams to design and implement SQL database solutions, leveraging stored procedures, views, and triggers to ensure data integrity, enhance security, and support business operations.
 - Utilized various SQL functions, such as aggregate functions (SUM, AVG, COUNT), date functions (DATEPART, DATEADD, GETDATE), and mathematical functions (ROUND, ABS, POWER), to manipulate and analyze data.
 - Assisted the machine learning engineering in creating machine learning models using AWS Sage Maker's pre-build algorithms and used Python to query and manipulate data in Sage Maker by using Jupyter Notebook interface.
 - Used AWS CloudWatch for monitoring and logging purposes making it easier to diagnose issues across the entire infrastructure.
 - Collaborated with the development team during code review sessions and ensured the code is merged before the code freeze date. Facilitated several test cases for User Acceptance Testing (UAT) and documented the Test Plan, Test Strategy, Test Scenarios, Test Scripts, Test Cases, Test Reports, and Requirements Traceability Matrix (RTM) using Cucumber.
 - Maintained the agile board using JIRA and Google Analytics and documented various issues using Confluence and SharePoint.
 - Utilized AWS Quick Sight to generate detailed reports and analytics on the performance of the portfolio in financial data.
- Environment: Agile-Scrum environment, Lucid Chart, MS Visio, Amazon kinesis data streams, Amazon S3, Amazon DynamoDB, Amazon Glue, AWS Sage Maker, Amazon API Gateway, Swagger, AWS Cognito, Amazon CloudFront, AWS Amplify, Amazon QuickSight and Amazon CloudWatch, JIRA, Google Analytics, Confluence, SharePoint

Sr. Business System Analyst

Invesco - Atlanta, GA

June 2020 to November 2021

The project was within a brokerage firm that oversees a diverse range of mutual funds and provides services such as fund distribution, investment counseling, retirement planning, Index funds, and wealth management. The objective of the project was to create an analytical approach to construct improved Index

Portfolios. This involved dissecting the total return of an Investment Instrument from market indices. The enhanced index portfolios aimed to achieve better performance compared to the overall market while reducing maintenance costs.

Roles and Responsibilities

- Ensured meticulous compliance with SEC (Securities and Exchange Commission) regulations, comprehensive Anti-Money Laundering (AML) regulations, and rigorous Know Your Customer (KYC) procedures, ensuring steadfast adherence to regulatory requirements and mitigating potential risks for the brokerage firm overseeing a diverse range of mutual funds.
- Actively participated in gathering requirements from various SMEs, Financial Analysts, Fund Managers, Risk Analysts and Portfolio Management via JAD sessions and conducted GAP analysis, Effort Estimation, SWOT and Document Analysis.
- Extensively involved in migrating the fields of financial instruments such as Fixed Income products like Treasury-Bills and Treasury-Bonds, Derivatives Securitized Products such as Mutual funds, Mortgage-Backed Securities on Trading Platform.
- Responsible for get-together data to make clear, brief, and complete business and utilitarian prerequisites for appointed assignments, with the goal that each part can grasp everything about of the end clients from this venture.
- Created the project plan, project charter, and work breakdown structure with the project manager.
- Provided post-implementation support in the SDLC environment, commencing from Initiation phase and Disposition stage.
- Collected both functional and non-functional needs for documentation in requirements artifacts such as the Business Requirement Document (BRD), Functional Requirement Document (FRD), and System Requirement Specification (SRS).
- Captured UI/UX diagrams like Process Flow Diagrams, Activity, Sequence Diagrams to complete process on Trading platform.
- Arranging a time to meet with workers, service providers, and other stakeholders to provide support for the end use.
- In conjunction with the Data Protection to improve data privacy to provide information for management & reporting.
- Assist in the organization of the completion of the EMEA & SIEM privacy risk assessment & significant issues.
- Worked on Entity-relationship modeling technique and assisted in developing Conceptual data models and Logical data models.
- Used SQL queries like select, insert, update, delete, sub-queries, joins, Unions and Union all for Data Analysis and review.
- Assisted in mapping of data from OLTP systems to operational data store (ODS) and then to corresponding Data mart.
- Created SSIS packages to transfer data between OLTP and ODS databases with various data flow transformations and flow tasks.
- Created and documented various artifacts like Data Mapping Document, documented

Data Translation rules and ETL loads.

- Designed ETL path, used tool Informatica PowerCenter to Extract, Transform and Load the data from source to target data.
 - Documented APIs requests and responses using Swagger tool and tested APIs integration using Postman and maintained them.
 - Worked on UI creation by using UML diagrams along with UI and app developers (component selection and creation of Radio buttons, Data-entry fields, check boxes and Drop-down lists to retrieve data for client-side and filtering them and storing).
 - Acted as proxy scrum master, facilitating all sprint events and sprint reports (Burndown/Burnup charts, information radiators)
 - Maintained a Requirement Traceability Matrix (RTM) to ensure that all Functional Requirements are addressed at the Use Case
 - Establish accountability and monitor implementation of risk management across the company, including, implementation of risk appetite and tolerances, risk identification, risk collation, a better and understanding assessment, and mitigation processes flow.
 - Acted as a liaison between business stakeholders, remote clients, Asset managers and Technology Teams in Business decision.
 - Collaborated with QA team to create and implement test plan and test cases for User Acceptance Testing (UAT). Involved with the whole UAT to ensure the performance of the system and application and meeting the acceptance criteria of the end- client.
 - Participated in performance and load testing using HP LoadRunner tool to test the enormous load parameters application.
- Managed bugs using Defect Tracking Tool JIRA, reviewed each defect and assigned development team to resolve problems

Environment: SDLC, Agile-scrum, UML, MS-Visio, MS-Project, JIRA 7.1.0, Swagger, Power Designer, Tableau, MS SQL server 2016, Postman, Informatica PowerCenter.9

Sr. Business Systems Analyst

Betterment - New York, NY

January 2019 to April 2020

Betterment's The project was aimed to optimize Tax-Coordinated Portfolio's tax efficiency for investors using the Betterment robo-advisor platform. The project focuses on strategically allocating investments across different types of accounts to maximize after-tax returns and minimize the impact of taxes on investment gains. By leveraging sophisticated algorithms and automated processes, Betterment aims to provide investors with a more tax-efficient investment experience.

Roles and Responsibilities:

- Ensured compliance with IRS (Internal Revenue Service) regulations, implementing tax optimization strategies within the Tax-Coordinated Portfolio to maximize after-tax returns for investors on the Betterment robo-advisor platform.
- Adhered to SEC (Securities and Exchange Commission) regulations, providing investment advisory services in accordance with industry standards, ensuring investor protection and legal compliance through various data security compliance.
- Developed good understanding of financial markets, including equity markets, bond markets, and commodity markets. I researched on financial instruments traded in these markets, such as stocks, bonds, futures, and options adopted by the firm.
- Worked with business teams to understand the compliances such as SEC's Regulation SCI (Systems Compliance and Integrity) and FINRA's Order Audit Trail

System, also gained knowledge on infrastructure-as-a-service, platform-as-a-service, and software-as-a-service (SaaS) and familiarized myself with regression analysis, time series analysis, Monte Carlo simulations.

- Performed System Analysis to understand the AS-IS process and collaborated with the team to design TO-BE process based on the requirements gathered and designed

TO-BE process using Business Process Modeling tool - Microsoft Power Automate.

- Worked with Subject Matter Experts (SME) to capture and understand the high-level business requirements by conducting different elicitation techniques like Questionnaire, interviews and surveys. Reviewed high-level requirements assisted Product Owner in prioritizing using MosCow and Kano and estimating using

Planning Poker and defining the scope of the project.

- Created Use Case Document for the Development and Testing teams to track the activities with the business scenarios and historical market data. Developed various kinds of high fidelity and low fidelity mockups and wireframes using

Microsoft Visio tool.

- Conducted User Story Writing sessions and determined Acceptance Criteria for PSPI during PI Planning.

- Participated in ART (Agile Release Train) ceremonies and facilitated communication between business and development team.

- Assisted the Product Owner in maintaining the Program Backlog and the dependencies across different teams within the ART. Helped the PO to do vertical slicing and Used Azure DevOps to draft the User Stories and to maintain the Program Backlog.

- Assisted the Scrum Master in conducting ART ceremonies such as PI Planning, System Demo, Product Increment review and Inspect and Adapt workshops. Assisted in creating sprint reports (Burndown/Burnup Charts, information radiators).

- Documented REST API via JSON, used Azure API Management, and converted it to API documentation stored in swagger. I conducted tests on the CRUD operations (GET, PUT, POST, and DELETE), to ensure that they performed as expected.

- I verified the response time and error codes was responding efficiently and provided error messages to users.

- Developed SQL queries using joins, unions, group by, order by, aggregate functions to extract data to manipulate and calculate information using Azure SQL

Database to fulfill data needs and identified tables from which data is being extracted.

- Reviewed existing Stored procedures, supported application developers by tuning SQL queries for better performance.

- Utilized ETL Process by using Azure Data Factory (ADF) for mapping data from different sources to the target for migrating the trading system into a cloud environment thereby reporting and analyzing metrics and Created Data Mapping document for the new integrated system after finalizing the attributes and tables with company stakeholders.

- Assisted the Testing team in creating Test Plan, Test Scripts, Test Cases, Test Reports and collected Test Data for successful completion of Integration Testing and Functional Testing using Azure Test Automation and documented all the test results.

- Monitored and analyzed the performance and availability of our application and infrastructure using Azure Monitor.

- Maintained the agile board and deployments using Agile DevOps and documented various issues using Confluence.

- Used Power BI for building data visualizations like ad hoc reports, summary reports, matrix reports, dashboards report.

Environment: SAFe, Microsoft Power Automate, MS Visio 2019, Azure API Management, Swagger, Azure SQL Database, Azure Data Factory, Azure Test Automation, Azure Monitor, Agile DevOps, Confluence, Azure Power BI.

Sr. Business Systems Analyst

Edelweiss Financial Services - Mumbai, India

February 2017 to July 2018

The project's objective was to improve the bank's portfolio management system. The bank's premium clients owned actively traded ETF portfolios. To enhance the management system for these portfolios, machine learning capabilities were introduced. These additions empowered the bank to provide personalized recommendations on stocks, bonds, and ETFs to clients based on their savings, earnings, and risk tolerance.

Roles and Responsibilities:

- I gained knowledge in Portfolio Management, ETFs, Machine Learning, Investment

Recommendations, Risk Appetite

- Ensure that the data stored follows all the regulation laid down by governing bodies like FINRA using Salesforce.

- Performed analysis such as Gap analysis, Root cause analysis, risk analysis, Cost-benefit analysis, and feasibility study to understand the AS-IS process and collaborated with the team to design TO-BE process based on the requirements gathered.

- Conducted interviews, requirement workshops, questionnaires, surveys using Salesforce, brainstorming sessions and JAD sessions to gather requirements for OLAP, wealth management and identify data warehouses, data marts, data lakes.

- Created and maintained the Business Requirement Documents (BRD), Product Backlogs, Sprint Backlogs, Product Increment Documents, Burnup and Burndown charts, and other relevant documentation.

- Worked closely with the development team to create mock-ups, wireframes, or UML diagrams using Lucid Chart that envisioned system architecture and assisted data architects in building the bus architecture, and schema such as galaxy schema.

- Experienced in the ceremonies/meetings of scrum and assisted the PO in prioritizing and estimating the product backlog and sprint planning meeting. Acted as a proxy product owner and proxy scrum master whenever necessary.

- Demonstrated expertise in testing REST APIs, performing CRUD operations and analyzing request/response mechanisms. Utilized SOA techniques to map URLs and supported development team with Postman and SWAGGER documentation.

- Participated and worked with the QA team in writing test cases and test scripts for sanity testing, smoke testing, and integration testing to ensure all the features are tested exhaustively. Maintained an RTM using HP ALM to track all the test cases and issues.

- Used Salesforce to create summary reports, matrix reports, dashboards so that trend analysis studies and business insights can be visually represented. Ensured that data stored follows all the regulation laid down by governing bodies like

SEC, FINRA.

- Involved in creating the Project Closure and Decommission report using Confluence while discarding legacy systems.

Environment: Waterfall-Scrum Hybrid, JIRA, Confluence, Lucid Chart, Informatica PowerCenter, Postman, Swagger, PL/SQL Developer, HP ALM, Salesforce, MS Outlook,

MS Excel, GitHub, Confluence.

Business Analyst

HDFC Bank - Hyderabad, India

March 2016 to January 2017

The project's goal was to enhance the current online banking application by introducing new features and functionalities. The primary objective was to enhance customer satisfaction and leverage the advantages of a service-oriented architecture. This architecture facilitated the exposure of individual business processes across multiple channels, aligning with customer demands and improving overall service delivery.

Roles and Responsibilities:

- Ensured compliance with both PCI-DSS (Payment Card Industry Data Security Standard) and GLBA (Gramm-Leach- Bliley Act) by implementing robust security measures, encryption mechanisms, access controls, and employee training programs within the online banking application. This ensured the protection of customer payment card data and financial information, maintaining privacy and confidentiality while providing improved features to enhance customer satisfaction.
 - Facilitated capturing and the business/system requirements including functional requirements and non-functional requirements, use cases, and business process redesign as needed for enhanced technologies using document analysis, one-to-one interview, prototyping, Brainstorming, Interface analysis sessions with the business users.
 - Conducted JAD sessions with management, SMEs, Business users, and other stakeholders for open issues and pending issues.
 - Documented BRD, FRD, Release Plan, Requirement Traceability Matrix (RTM).
 - Conducted User Story Writing Sessions to create User Stories and assisted PO in determining Acceptance Criteria and the Definition of Done (DoD), (DoR) for Potentially Shippable Product Increment (PSPI).
 - Created high fidelity and low fidelity wireframes and mockups using Balsamiq screens in the requirements gathering phase.
 - Created UI/UX diagrams like Use Case Diagrams, Activity Diagrams, Sequence Diagrams and ER Diagrams in MS Visio.
 - Tested and logged defects using JIRA. Assisted in the implementation of Sharepoint as the documentation space of choice, which allowed us the flexibility to integrate seamlessly with JIRA and forge a collaborative understanding and workspace.
 - Prepared Requirement Traceability Matrices (RTM), and managed change requests effectively throughout SDLC lifecycle.
 - Provided inputs to create and maintain SQL queries. Involved in fetching and displaying data using SQL queries. Effectively executed exporting table data in MS Excel and flat files to SQL Server. Testing and executing SQL queries to access data.
 - Documented test cases, test scenarios, test scripts, test plans. Assisted in performing functional testing, performance testing and end to end testing.
- Assisted in QA phase planning, coordination and implementation of QA strategy for the overall project. Extensively involved in User Acceptance Testing (UAT). Assisted the developer in Test-driven Development (TDD).
- Used SharePoint for Content Management and Document Management where everyone in the company can access to documents.
 - Analyzed and accurately identified business risk, required changes were done accordingly and re-baseline and deliverables.

Environment: Waterfall- Scrum Hybrid, MS Visio, Enterprise Architect, RESTful API,

SharePoint, Advanced MS-Office (MS Excel, MS Word, MS PowerPoint), SOL queries, UAT, ER Diagrams, JAD sessions, Tableau, Balsamiq screens.

Web UI Developer

ICICI Bank - Mumbai, India

July 2015 to March 2016

The scope of the project was to enhance the online trading platform for ICICI Direct. The aim was to add in new features such as market research, day trading, adding a separate account for NRI's and creating a separate login for them.

Roles and Responsibilities:

- Worked in Waterfall Methodology and extensively involved in Requirement Analysis, Requirement Gathering.
- Developed a web application using Java, Spring Framework, and to manage the portal feature for the application.
- Built a user-friendly web interface with HTML, CSS, and JavaScript, allowing customers to easily manage account.
- Translated intricate wireframes and design mockups into fully functional web pages, adhering to best practices in UI development.
- Designed and implemented a database schema using MySQL to store and retrieve customer database data.
- Developed unit tests using JUnit and integrated continuous integration and delivery pipelines using Jenkins to ensure code quality.
- Utilized RESTful web services to enable communication between the front-end application and the back-end server.
- Collaborated closely with backend developers to integrate the frontend components with RESTful APIs, leveraging frameworks to create dynamic and data-driven user interfaces.
- Solid experience of Quality Assurance (QA) in reviewing Test Procedures, reviewing and maintaining Test scripts, analyzing bugs, interacting with team members in fixing errors and UAT
- Conducted meticulous unit testing, debugging, and performance optimization to guarantee the optimal performance of the web UI, achieving seamless user interactions and minimizing latency.
