

Vamsi Krishna Thanneru

Sr. Techno Functional Consultant

Email: vamshiba99@gmail.com Ph: 469-663-0164

<https://www.linkedin.com/in/thanneru/>

Around 9 years of experience as a **Lead Techno Functional Consultant** with demonstrated capability to work in various **Software Development Lifecycle (SDLC)** methodologies such as **Waterfall** and **Agile (SAFe, Scrum)** with profound comprehension of different domains like **Banking, Finance** and **Utility**. Smart working attitude joined with extraordinary authority abilities with team management and leadership skills.

PROFESSIONAL SUMMARY

- Expertise in creating various project documents like **Business Requirement Documents (BRD)**, **Functional Requirement Documents (FRD)**, **Software Requirement Specification (SRS)**, **Change Request Analysis**, **Requirements Traceability Matrix (RTM)** **Data mapping**, **Data definition document**, **UAT Document**.
- Competent of eliciting requirements through methods such as **Document Analysis**, **Reverse Engineering**, **Focus Group Workshops**, **Interviews** with partners, **Joint Requirements Planning (JRP)**, and **joint application development (JAD)** sessions.
- Develop and manage multiple complex IT projects/programs from beginning to end including **Business Case**, **Benefits Realization**, **Estimation**, **Scope**, **Schedule**, **Budgeting**, **Timeline**, **Capacity Planning**, **Resource Allocation** and **Project Execution**, Identify and manage **Project Dependencies** and **Critical Paths**.
- Managing the **Program Schedule** which identifies the **Milestone** and **High-level dependencies** for all the projects within the program and establishes project plans.
- Collaborated with stakeholder to discuss **Requirements**, **Pain Points**, **Use Cases**, **Workflow Dependencies**, **Scalability**, and **Unified Mapping Processes**.
- Ensured team utilized Agile Scrum methodologies efficiently by collaborating with project team using **Slack** as a communication tool to collaborate with lead developer and Scrum master to quickly eliminate **Roadblocks**, discuss work agreements, identify **Definition of Done (DoD)** and set quantifiable team goals.
- Extensive experience with **GAP (As-Is and To-Be processes of the business entity)**, **Impact**, **Risk**, **SWOT**, **Cost-Benefit Analysis**, **Root Cause Analysis**, and **Risk Analysis**.
- Expertise in **BPMN** and **UML Diagrams** such as **Use Cases**, **Activities**, **Sequences**, and **Entity Relationship Diagrams** in **MS Visio**, **Lucid Charts**, **Mockups**, **Wireframes**, and Prototypes in **Balsamiq**, and **HTML**.
- Experienced with **XML**, **JSON**, **WSDL**, **HTML**, **AJAX**, **API**, **SOAP**, and **RESTful Web Services**, as well as **SOA**, **Micro-Service Architectures**.
- Working knowledge of databases such as **Oracle**, **DB2**, and **SQL Server** for **Data Processing**, **Data Mapping**, **Data Modeling**, **Extraction**, **Transformation**, and **Loading (ETL)**, **Data Standardization**, **Cleansing**, **Scrubbing**, **Deduplication**, and **Normalization** and **Data Visualization** and reporting applications such as **Tableau** and **SQL Server reporting services (SSRS)**.
- Expertise in **Enterprise** and **Mart Level Architecture**, **Data Modeling**, **Relational** and **Dimensional Star Schema**, data quality, data migration and data integration **ETL process**, **Meta Data Management**, and **OLAP reporting**
- Facilitated end-to-end Web Service testing on **SOAP & REST API** through **Swagger & POSTMAN**.
- Created **API documentation** using **POSTMAN** and **Swagger**, **API testing** using **Swagger** for **SOAP**, **REST**, created **API Mapping**, as well as in the capturing of various response validation messages,
- Responsible for the delivery of end-to-end solutions by working closely with **Business**, **Analytic Users**, **Development** and **Operations teams**.
- Strong Experience on **E commerce Portal Web application** enhancement and development, **Content Management** systems for **E commerce** like **ATG**

- Understanding on collect product catalog data from client business users, manipulate data for import into **Ecommerce** system and identify **data gaps**.
- Worked with Business users and trading partners to gather, analyze and develop **E2E, B2B and B2C** artifacts, mapping specifications, test cases and implementation guides.
- Refined the **Product Backlog** by writing technical user stories based on the **INVEST Criteria**, prioritizing user stories based on the **MoSCoW Technique**, and tearing down user stories based on the **SPIDR** criteria.
- Actively participated in all **Scrum Ceremonies**, including **Sprint Planning, Daily Scrum, Sprint Summary, Sprint Retrospective**, and **Product Backlog Grooming**, as well as **SAFe ceremonies**, such as **PMC Meetings, PO Sync**, and **Architectural Review Calls**, were assisted and engaged in.
- Experience working with Banking compliance like **FATCA, FINCEN, OFAC, CDD, SAR'S, BSA, SEC, FINRA, OFAC, TILA, RESPA**.

TECHNICAL SKILLS:

Methodologies	Waterfall, Agile (SAFe, Scrum), Hybrid
Web Technologies	XML, HTML & CSS, SOAP, REST, Web Services, API and AJAX
Project management Tools	Rally, Jira, Azure Devops, MS Project
Modelling Tools	MS Visio, Lucid Charts, Balsamiq
Visualization Tools	Tableau, MS Power BI, SAP Crystal reports
Documentation Tools	MS Office Suite, SharePoint, JIRA.
Testing Tools	Swagger, Postman, SoapUI, Selenium, Selenium
ETL Tools	Informatica, Power center 9.0+, Data Stage, MS Excel

CERTIFICATIONS:

- Scrum Master Accredited Certification.
- Six Sigma White Belt Certification.
- Professional Scrum Master

WORK EXPERIENCE:

Client: Next Era Energy, Miami, FL

Project: Employee App & Guest Pay

Role: Product Manager/Product Owner

Timeline: April 2023 – Present

- Performed **GAP** analysis to identify **As-Is** and **To-Be Process** from gathered business requirements and recorded the Action Plan that should be implemented while upgrading the software.
- Organized Backlog **grooming sessions**, ensuring that **DOR** and **Acceptance Criteria** are specifically articulated and prioritized using the **MoSCoW technique**.
- Engaged in all scrum ceremonies like **Sprint Planning, Daily-Standup, Sprint Review, Sprint Retrospective** and **Backlog refinement**.
- Developed technology road map working with business and Engineering teams, Translated the technical and design requirements into objectives, Features and stories in **Azure Devops**.

- Aided in the **JAD** session where Requirement Modeling was done by generating **UML diagrams** and **BPMN** diagrams to identify the areas that need customization by documenting the obtained requirements in **BRD**.
- Created **Use Cases Diagram** for validating Entity Reference Data and Verification of customer records: legal name, address, business purpose legitimacy and analysis of transaction activity.
- Facilitated **Triage Calls** to identify issues using **Root Cause Analysis** and collaborated with the development and testing teams to resolve them.
- Involved in technical **API documentation** using **POSTMAN**, **API** testing using **SoapUI** for **SOAP**, **REST**.
- Validated request and response using **SOAPUI Pro** for web services and **API** usage for inquiry, create, and update operations between various applications, ensuring secure and real-time data sharing in appropriate formats such as **SOAP**, **XML**, **REST**, **API**, **JSON**.
- Excellent back end **SQL object development** skills, including **Tables**, **Stored Procedures**, **Functions**, **Views**, **Indexes**, **Rules**, and **SQL Performance Tuning**, to aid with data manipulation and consistency.
- Designing and testing **PowerBI** dashboards, Reports, Imported .csv and text files to **PowerBi**
- Built Visualization designs and dashboards using **Power Bi** and **AWS Kibana**, Supported **BI** teams with reporting requirements.
- Created **Test Cases**, **Test Strategies**, **Test Plans** and **Test Scenarios** based on user stories and Acceptance criteria defined according to the business requirements.
- Used **Swagger** to **Test** and **Document** the external **APIs** and **Web Services** used in the project and was involved in developing **Service Level Agreements (SLA)**.
- Experienced in **Black Box**, **Manual**, **Unit**, **System**, **Performance**, **Load**, **Stress**, **Regression**, **Automated**, **Functional**, **Non-Functional**, **UAT**, **Smoke** and **Sanity Testing** of applications with knowledge on **STLC (Software Testing Lifecycle)** by creating **Test plan**, **Test cases**, **Test Scenarios**, **Test reports** and **Requirements Traceability Matrices (RTM)**.
- Authored **User Stories** and **Acceptance Criteria** for business requirements using **INVEST** criteria pertaining to the **ATDD** methodology, and managed team to promote velocity and track performance using **Agile KPIs** in **Jira Tool** such as the **Burndown** and **Burnup Charts**.
- Facilitated **UAT Sessions** and developed **Test Plans** and **Test Cases** for verification and validation of requirements at all levels.
- Actively participated in Program Level Ceremonies such as **PO Sync**, **PMC**, and **Architectural Review Call (ARC)** with Product Owner to identify feature dependencies and resolve Architectural Runway needs with **System Architects** and **Tech Leads**.

Environment: Agile-SAFe, Rally, MS-Visio, IBM Blue Works Java, MS Visual Studio, IBMDB2, Tableau, MS Office, Azure devops, SharePoint, CI/CD, Swagger, AWS, IAM, SailPoint, CyberArk, Splunk, AWS

Client: T-Mobile

Project: Promotions

Location: Bellevue, WA

Role: Product Manager

Timeline: July 2022 – March 2023

- Participated in **Daily Standups** and Conducted weekly **Backlog Refinement** session with the **Offshore** scrum team.
- Eliciting Business Requirements from business stakeholders, assisted in the design of consumer stories and acceptance criteria into the **Product Backlog**.
- Documented requirements in **Business Requirements Document (BRD)**, **Functional Requirements Document (FRD)**, **Non-functional Requirements Document (NFRD)** and **System Requirements Document (SRD)**
- Extensive implementation knowledge of **Databases**, **Data Table Structures**, **Data Warehousing**, **Schemas**, **Data Marts**, **OLAP** operations like **Rollup**, **Drill down**, **Slicing/Dicing**, **Star Schema**, **Snowflake Schema**, **Galaxy Schema**.
- Excellent backend **SQL object development** skills, including **Tables**, **Stored Procedures**, **Functions**, **Views**, **Indexes**, **Rules**, and **SQL Performance Tuning**, to aid with data manipulation and consistency.

- Serving Clients ad liason between IT and **Business groups** on system development and **ecommerce** application to configure **Tmobile.com website**
- Managed Implementation and launch of recurring annual **OEM launches** and updating the Promotions and new implementations and also support **eCommerce** product data management
- Created **Test Cases, Test Strategies, Test Plans** and **Test Scenarios** based on user stories and Acceptance criteria defined according to the business requirements.
- Used **Swagger** to **Test** and **Document** the external **APIs** and **Web Services** used in the project and was involved in developing **Service Level Agreements (SLA)**.
- Authored **User Stories** and **Acceptance Criteria** for business requirements using **INVEST criteria** pertaining to the **ATDD** methodology, and managed team to promote velocity and track performance using **Agile KPIs** in Jira Tool such as the **Burndown** and **Burnup Charts**.
- Actively participated in Program Level Ceremonies such as **PO Sync, PMC**, and **Architectural Review Call (ARC)** with Tech leads to identify feature dependencies and resolve Architectural Runway needs with **System Architects** and **Tech Leads**.
- Experienced in **Black Box, Manual, Unit, System, Performance, Load, Stress, Regression, Automated, Functional, Non-Functional, UAT, Smoke** and **Sanity Testing** of applications with knowledge on **STLC (Software Testing Lifecycle)** by creating **Test plan, Test cases, Test Scenarios, Test reports** and **Requirements Traceability Matrices (RTM)**.
- Attended **UAT sessions** and developed **Test Plans** and **Test Cases** for verification and validation of requirements at all levels.

Client: American Express

Location: Manhattan, NY

Project: India Data Localization

Role: Product Manager /Product Owner

Timeline: Aug 2021 - July 2022

- The managed full lifecycle of software development including documenting **Functional Specs, Technical Specs, Coding, Unit Testing, System Integration Testing** and **Implementation**.
- Defining financial forecasts and cost-benefit analysis by detailed **interviews** and **JRP sessions** with stakeholders, partners, and subject matter experts (**SMEs**) such as **Confidential services, Underwriters**, and **Credit Analyst**.
- Created **Agile Project charter**, defined **Project Scope** and **Objectives**, involving all relevant stakeholders and ensuring technical feasibility.
- Provide an active role in mitigating impediments impacting successful team completion of **Release/Sprint Goals**.
- Aided in the **JAD** session where Requirement Modeling was done by generating **UML** diagrams and **BPMN** diagrams to identify the areas that need customization by documenting the obtained requirements in **BRD**.
- Creating **Client-Side Validation, Server-Side Validation**, and **Database Validation** for various system operations and also Involved in defining the source to target **data mappings, Data governance policies, business rules** and **data definitions**.
- Created **API documentation** using **POSTMAN** and **Swagger**, **API** testing using **Swagger** for **SOAP, REST**, created **API Mapping**. Traced and cataloged data processes, transformation logic's to identify data governance issues.
- Engaged in all scrum ceremonies like **Sprint Planning, Daily-standup, Sprint Review, Sprint Retrospective** and **Backlog refinement**.
- Prioritized User stories using **MoSCoW** technique during **Sprint planning** and **Backlog refinement sessions** and in estimating the user story points using **Planning Poker** and the **Fibonacci sequence**.
- Worked with application **Architects** and **Directors** to set the expectations and plan the uplift based on current project work and capacity.
- Designed prototype of **Orchestration Processes** in MS Visio by invoking respective **Web Services** and **APIs** to scrub the errors in initial loan origination validation process.
- Experience creating database objects such as tables, constraints (Primary key, Foreign Key, Exclusive, Default), and indexes for **OLTP** and **OLAP** applications using Normalization and Denormalization techniques.

- Involved in projects which used **Data Mapping and Data Conversion** tools.
- Designed and tested **PowerBI** dashboards and Reports, for visualization.
- Worked with Swagger for **API Documentation for REST and SOAP**.

Environment: Agile- Scrum Framework- (HTML/CSS, Javascript, Java, Oracle), MS Visual Studio, MS Project, MS Visio, Jira, Confluence, PowerBI, Web Services, API, Microservices, AJAX, SOAP UI, RESTful Services, Microsoft Dynamics, Splunk, AWS

Client: Silicon Valley Bank

Project: Anti Money Laundering System

Location: Tempe, AZ

Role: Technical Product Owner

Timeline: April 2019 - July 2021

- Ensured that information obtained was consistent with **BSA AML Policy** and Procedures and satisfied regulatory requirements.
- Integrated with the data from credit bureaus, and the existing **Customer Due Diligence (CDD)**, **Customer Risk Rating** procedures, and **FATCA** identifying the high-risk customers to Actimize AML.
- Involved in the recommendation for the rules-based flags for any transaction or activity that violated a business rule and enhanced the reporting process of the **AML investigations** and **SAR** filings.
- Implementing **NAIC Code** risks and mitigation to support the AML risk review.
- Defined, groomed, documented and maintained user stories/requirements in partnership with the Engineering team.
- Performed **GAP** analysis to identify **As-Is** and **To-Be Process** from gathered business requirements and recorded the Action Plan that should be implemented while upgrading the software.
- Used **UDDI** to locate the existing web services, while **WSDL** was used to locate request and response web methods.
- Validated request and response using **Swagger** for web services and API usage for inquiry, create, and update operations between various applications, ensuring secure and real-time data sharing in appropriate formats such as **SOAP, XML, REST, API, JSON**.
- Assured the application is compliant with all **AML laws, OFAC, BSA, FINCEN**, and **CDD** regulations.
- In conjunction with a residential underwriter, home loan servicer, credit consultant, and compliance experts, business rules for fixed-rate mortgage loans, adjustable-rate mortgage loans, government-insured mortgage loans, Jumbo mortgages, and standard mortgages.
- Ensured that the request complies with all **TRID rules**, as well as the laws of **OFAC, BSA, FINCEN**, and **HMDA**.

Environment: Agile-SAFE, Rally, MS-Visio, Java, MS Visual Studio, IBM Db2, Tableau, MS Office, Rally, SharePoint, CI/CD, Swagger, AWS, IAM, SailPoint, CyberArk, Splunk, AWS.

Client: National Grid

Project: Gas Line Maintenance

Location: Brooklyn, NY

Role: Business Systems Analyst

Timeline: Jan 2018 - March 2019

- Facilitated **Focus Groups, Seminars, Questionnaires**, and **Brainstorming Sessions** with sector executives, promoters, and technological specialists to collect market and device requirements for the **Potential Shippable Product Increment (PSPI)**.
- Among the artifacts created were **Business Requirement Documents (BRD)**, **System Requirement Specifications (SRS)**, and **Use Cases**.
- Prior to each sprint, create **Mock-Ups** and **UML diagrams** such as **Process, Sequence, Orchestration**, and **Data Flow Diagrams, Entity Relationship Diagrams (ERD)**, **Logical** and **Conceptual Data Model Diagrams** to ensure seamless

development and testing.

- Validated request and response using **SOAPUI Pro** for web services and API usage for inquiry, create, and update operations between various applications, ensuring secure and real-time data sharing in appropriate formats such as **SOAP, XML, REST, API, JSON**, and others using the **Service Oriented Architecture (SOA)** framework.
- Facilitated sessions for **Joint Requirement Planning (JRP)** and **Joint Application Development (JAD)** to compile criteria and convert functional requirements into technical requirements.
- Facilitated **User Acceptance Testing (UAT)** after each sprint to ensure that the software increment is free of technical debt and satisfies the criteria of the company's **Minimum Viable Product (MVP)** and **Definition of Done (DOD)**.
- Assisted QA team with manual testing, including the creation of artifacts such as **Test Schedules, Test Analysis Notices, Test Conditions, Test Measures, Test Results, Fault Control, Bug and Failure Prevention Methods**, the **Requirements Traceability Matrix (RTM)**, and the maintenance of **Acceptance Test-Driven Development (ATDD)** operations.
- Worked diligently on **Change Request Management** and performed **Impact Analysis** as well as **Capacity and Velocity** planning.
- Implemented the '**Pair Programming**' strategy to maximize team velocity while decreasing the chance of bugs.

Environment: Agile-Scrum framework, UML, BPMN, VISIO, Oracle, SQL Server, Excel, Windows 7.0, SoapUI, CyberArk, SOAP, REST, XML, SOAP, WSDL, WADL, FHIR MS-Office, SailPoint, XML spy, ServiceNow, SharePoint, TFS, IAM, DocuSign, Splunk, AWS.

Client: HDFC Credila

Project: Loan Origination System

Location: Hyderabad, INDIA

Role: Jr. Business Systems Analyst

Timeline: Jan 2014 - Aug 2016

- Facilitated requirement elicitation meetings, such as individual interviews and brainstorming sessions with the product owner and business users, to gain a complete grasp of the business objectives.
- Maintained various documentations, such as **Business Requirement Documents (BRD)** and **System Requirements Specification (SRS)**, to capture **Functional, Non-Functional, and Technological Needs**.
- To analyze business needs **UML Diagrams** such as **Use Case Diagrams** and **Activity Diagrams** were created.
- Worked with the QA team to develop the test strategy, test conditions, and test cases that would be utilized throughout the testing process. Depending on the company's requirements
- Participated in **User Acceptance Testing (UAT)** to guarantee that the created application is dependable in real-world scenarios.

Environment: waterfall, MS Visio, Excel, HTML, SOAP, REST, WSDL, WADL, Postman, TFS, JAVA.

EDUCATION:

Bachelor of Technology in Electronics and Communications Engineering: GRIET, India

May 2014

Master of Science in Information Systems: California Lutheran University, Thousand Oaks, CA

Dec 2017
