

Summary

- Over 8+ years of IT experience in the field of software design, software development in web-based applications developed on the J2EE platform.
- Rich exposure to Education, Field Service, Financial and Telecommunication domain.
- Extensive experience in development, Enhancement and Support of applications in Client/Server Technology using N-Tier J2EE architecture
- Experience in implementing **microservices** using **Spring Boot** framework.
- Extensive experience of Coding and maintenance of J2EE based applications using Java 8 version, Java Collections, Data Structures, Multithreading, JDBC, Servlets, JSP, JSF, EJB, AJAX, JMS Custom Tag Libraries, JSTL, XML and Web Services.
- Extensive experience in various Java 11 technologies including Core Java, J2EE, Spring (IOC, MVC,AOP, DAO), Spring Boot, Hibernate and Java 11 Web Framework along with Web Services (SOAP,RESTful) and Database related technologies.
- Good experience in log4j implementation to persist the data into log files and experience with Maven for the build and deployment of applications.
- Experience in Spring Framework such as Spring IOC, Spring Boot, Spring Cloud, Spring DAO, Spring ORM, Spring MVC, Spring Rest, Spring Resources, Spring JDBC, Micro-Services.
- Expertise in configuring the Spring Application Context with dependency injection and using Spring Framework that can integrate Hibernate and Web Services.
- Experience in Microservice architecture, with Spring Boot-based services interacting through a combination of REST and MQ and leveraging AWS to build, test and deploy micro services.
- Strong knowledge on Hibernate and in using Hibernate Connection Pooling, HQL, Collections,Hibernate Caching, Hibernate Transactions, Optimistic Locking.
- Experience in Developing User Interface (UI) Rich Web Applications, and Web Service Applications using Front End/User Interface (UI) Technologies like Object Oriented JavaScript, Backbone JS, Angular JS, React Js, Node JS, Bootstrap Framework, Media Queries, CSS Frameworks.
- Expertise in Angular JS framework and React JS framework and its ability to create simple and scalable code for SPA.
- Experience in building application with React JS, Redux, Require JS, in MVC architecture.
- Experience in Angular/React Js development using Test driven development (TDD) using unit testing frameworks such as Jasmine Protractor, Karma and Selenium.
- Experience on AWS cloud services like EC2, ECS,S3, RDS, ELB and EBS for installing and configuring.
- Experience on AWS Code pipeline, Code Build, Code Deploy, Spinnaker.
- Worked with Kafka, Active MQ, Rabbit MQ is used for Messaging for decoupling applications by separating sending and receiving data.
- Experience in migration activities for Grails and Java applications in updating to higher versions.
- Experience in writing test cases using features files to Automate the application using Cucumber/ Selenium framework.
- Experience in working with different databases like Oracle Db, SQL Server, DB2 and MySQL & very good experience in OOAD and UML methodologies, Class diagram using Rational Rose.
- Good working knowledge of NoSQL Databases like MongoDB, Cassandra.
- Hands on experience in configuration and deployment of multi-tier applications using servers like WebSphere, Web Logic, Tomcat and JBoss.
- Experience in the field of release automation for Java application to achieve continuous integration (CI) and continuous delivery (CD).

Technical Skills

Programming Languages	Java 8, Java 11, SQL, PL/SQL
Java/J2EE Technologies	J2EE (Servlets, JSP, EJB, JavaBeans, JDBC, JMS, JPA, JNDI, JAX-WS, JAX-RS), MVC, Struts.
Database	MySQL, Entity Framework, Oracle, MS SQL Server, DB2, Cassandra, PL/SQL, MongoDB, DynamoDB, Couchbase.
Messaging Servers	RabbitMQ, ActiveMQ, Kafka.
Platform /OS	Windows OS, Linux, MacOS
Web Technologies	JavaScript, AngularJS, Backbone JS, XML, HTML5, CSS3, XHTML, XMLSchema DHTML, JSON RPC, AJAX, jQuery, WebSocket, Knockout JS, React, React JS, Angular JS & 2, XSL, XSLT, SED, DTD.
Web/App Server	Oracle WebLogic Application Server, IBM WebSphere Application Server, Apache Tomcat Webserver, Boss Application Server.
Web Services	SOAP, Restful, JAX-B, JAX-RS, WSDL, AWS, Apache Axis, XML, XHTML, XSLT and JAX-WS.
Cloud Services	AWS (EC2, ECS, ECR, Lambda, S3, RDS, ELB & EBS), Docker
DevOps	GIT, Jenkins, Maven/Gradle, AWS-CodeCommit, AWS-codeBuild, AWS-CodeDeploy, Spinnaker, Jfrog
IDE	Eclipse, IntelliJ, Spring Suite Tool, Git, GitHub, ClearCase, RAD, SVN, NetBeans, JBOSS Developer Studio.
Frameworks/Testing	Hibernate, Spring, Springboot , Grails, Agile & Scrum, JUnit, Postman, TestNG, Selenium, Jasmine, Mockito, Power Mockito, Cucumber.
Build/Performance Managing Tools	JIRA, Bugzilla, Rational Rose, RSA, Docker, Docker Compose, Kubernetes, Helm, SonarQube, Datadog.

Professional Experience

Lumen (CenturyLink), St. Louis, MO

October 2021 – Present

Java Full-Stack Developer

Responsibilities -

- Involved in SDLC cycle like Analysis, Designing, developing, Testing, and deploying the Enterprise applications using Java and
- Object-Oriented Design Patterns based on business requirements.
- Daily Interaction with Client's Technical Architecture in meetings to focus on the performance and implementation of code development.
- Implementing new API's using Restful Web services using Spring Boot to interact with mobile application and Clients legacy systems.
- Experience using **SpringBoot** which is radically faster in building cloud **Microservices** and develop a Spring-based application with very less configuration.

- Used **Kafka** Messaging Services to interact with external interfaces.
- Involved in designing, developing and testing the web application by using the HTML5, CSS3, Bootstrap, and ReactJS.
- Created the responsive UI components using React/Redux and to dispatch events to the store.
- Worked in using React JS components, Forms, Events, Keys, Router, Animations and Flux concept.
- Implemented client-side Interface using React JS and used various predefined components from NPM (Node Package Manager) and Redux library.
- Involved in creating custom components and library components for displaying data using React with Redux, ES6.
- Used React Http service to make GET/POST/PUT/DELETE to deal with API request and response.
- Created various template and data-driven form components using React Forms and define module-level routing for various components in the application using React router.
- Developed unit test cases using Jasmine, karma, web pack and used angular testbeds and async utilities to mock async calls.
- Created collections and performed CRUD operations on MongoDB using Mongo Repository and spring Mongo Template for persistence.
- Involved in writing the test cases for the application using Junit, Mockito.
- Upgraded Grails applications to 5.x version.
- Worked on migration activities of applications from AWS to EKS.
- Developed an information pipeline utilizing Kafka and Storm to store data into HDFS.
- Loading spilling data using Kafka, Flume and real time Using Spark and Storm.
- Implemented various hive optimization techniques like Dynamic Partitions, Buckets, Map Joins, Parallel executions in Hive.
- Leveraged **CI/CD** tools to build and deploy microservices in **AWS** platform using Jenkins and **Spinnaker**.
- Server instances are created on AWS and worked on Code pipeline with Tomcat, Swagger are installed and used for deploying Microservices.

Environment - Java 1.8, **Spring Boot**, AWS, S3, EC2, Kafka, IntelliJ, Microsoft Visual Studio, TypeScript, **ReactJS**, Git, Cucumber, SOAP, Jasper Reports, Jenkins, AWS, Oracle, Mongo DB, Flume, spark, Kubernetes.

Zinier Technologies, Bengaluru India

Java Back-End Developer, March 2020 – August 2021

Responsibilities -

- Created System Requirement Specifications (SRS) report of the project by collecting all the requirements from client.
- Implementing new API's using Restful Web services using Spring Boot to interact wif mobile application and Client's legacy systems.
- Developed single page applications using Angular 2, Typescript, HTML5, CSS3, and Bootstrap.
- Created Typescript reusable components and services to consume REST API's using Component-based architecture provided by Angular 2.
- Good Knowledge on using Angular APIs like @angular/http for making HTTP requests, @angular/common Common core things including form validation, @angular/router Routing for our entire app.
- Used Hibernate Transaction Management, Spring/Hibernate Batch Transactions, Hibernate cache Concepts.
- Experience in handling messaging services using Apache Kafka.
- Designed overall Microservices architecture including Gateway, API Service, Core Service, Discovery Server and Monitor Server using SpringCloud Netflix.
- Built a stored-procedure-as-a-service microservices that is generic: will take sproc name and parameters and spit out output or error from the database.

- Loading the data to Cassandra Cluster with the help of Java API.
- Created and configured EC2 instances on Amazon Web services (AWS) for establishing clusters on cloud and created S3 buckets for our application.
- Worked on Multiple AWS instances, set the security groups, Elastic Load Balancer and AMIs, Auto scaling to design cost effective, fault tolerant and highly available systems.
- Design and develop microservices based applications using Spring Integration and Spring Boot framework.
- Developed data pipeline utilizing Flume, Sqoop, Pig and Java MapReduce to ingest client behavioral information and money related histories into HDFS for analysis.
- Deploy and administer microservices based applications on Cloud infrastructure using Pivotal Cloud Foundry.
- Exposed the Web Services to the client applications by sharing the WSDL.
- Created DDL and DML SQL scripts for creation of database objects in SQL Server db.
- Created logical and physical data models putting to practice, concepts of normalization and RDBMS.
- Created new tables, PL/SQL stored procedures, functions, views, indexes and constraints, triggers, and Required SQL tuning to reduce the response time in the application. Used Jenkins to load JAR files from Database required for running the application.
- Used Maven building tool for creating EAR file to be deployed in application servers. It is also used for Dependency management of code in application.

Environment - J2EE, Java 1.8, spring Boot, Angular, Microservices, SQL Server, Hadoop, Scala, MapReduce, AWS, jQuery, JavaScript, Cassandra, Eclipse, Web Sphere, Agile Methodology, SVN, Maven, Jenkins, JUnit, Winscp.

**Reliance Jio Infocomm Limited,
Hyderabad, India**

Java Back-End Developer, April 2018 – February 2020

Responsibilities -

- Worked within and across Agile teams to design, develop, test, implement, and support technical functions across a full stack of development tools and technologies.
- Worked using Java 8 for implementation development, used Java Collection API for data structure, annotations for code reuse and exceptions to handle the errors.
- Developed the application by using Scrum methodology in agile environment.
- Designed the architecture based on the popular J2EE Model 2 approach of MVC design paradigm.
- Developed application on Spring framework by utilizing its features like Spring Dependency injection, Spring Security, Spring Web flow with Spring MVC using Spring Rest Template to use the exposed REST Web Services.
- Involved in developing code for obtaining bean references in spring framework using Dependency Injection (DI) or Inversion of Control (IOC) using annotations.
- Developed Business components using Java Objects and used Hibernate framework to map the Java classes to the database using Annotations.
- Development of application communication through asynchronous message using JMS, MQ, MD process message in point-to-point scenarios.
- Developed Java/J2EE code, business logic using Spring, Hibernate framework and OOP concepts, involved in Peer code reviews.
- Implemented Responsive development using Bootstrap and CSS3 media queries.
- Used Spring Security for implementing the authentication, authorization, and access-control features.
- Published Restful services using Spring MVC and consumed rest services using spring-rest template.
- Functionality is implemented by developing RESTful web services using spring boot, JPA, Cloud foundry and Oracle.

- Used Spring Boot with Microservices to create RESTful Web Services, set JSON data type between front-end and the middle-tier controller, and deployed it on AWS ECS using Docker container.
- Developed code for obtaining bean references in Spring and used dependency injection and Inverse of Control to make the application reusable and maintainable.
- Developed Object Relational Mapping (ORM) using Hibernate and Develop Data Access Object (DAO) persistence layer.
- Used MongoDB No-SQL database and set connection by using Hibernate to fetch data from the database and store data in the database.
- Used Java Mail Sender API for sending detailed notifications and the receipt to the internal customer for testing purposes.
- Experienced in writing complex SQL queries for extracting data from multiple tables.
- Extensively executed SQL queries to view successful transactions of data.
- Extracted data from various sources like Oracle, flat files, and SQL Server.
- Development of XML/XSLT/XSD for schema definitions.
- Unit testing and Integration Testing of application.
- Coordinated with the testing team for bug reports and fixes and tracking these tickets through JIRA.
- Good experience with test driven software development and unit testing tool like JUnit to write and run repeatable test.
- Used GIT HUB for maintaining the component and to release version management.
- Used Jenkins to build the War file.
- Tested web services on SOAP UI and SOAP Sonar.
- Used Log4j for logging errors, messages, and performance logs.

Environment - Java 8, Spring MVC, REST Services, Hibernate, WebLogic 11g, Oracle, jQuery, JSON, MongoDB, Eclipse, Log4j, GIT, Maven, Postman, RabbitMQ, JUnit, AWS, Docker.

Indian Servers, Vijayawada, India

Java Back-End Developer, April 2014 – February 2018

Responsibilities -

- Implemented Microservices architecture using Spring Boot for making the application smaller and independent.
- Designed and developed the project using MVC design pattern.
- Used Hibernate annotation to control data fetching and cascading type and batch size to improve the data access performance.
- Worked on advanced Hibernate associations with multiple levels of Caching, lazy loading.
- Implement a JPA repository to access data as DAO.
- Configured Spring Security to grant permissions for different level resources.
- Implement OAuth2 to verify authentication.
- Used Amazon cloud formation templates for creating stacks to launch AWS infrastructure and resources.
- Configured Jenkins for project build and deployment.
- Worked with AWS and utilized EC2 to deploy Docker containers onto the servers.
- Provided Log4j support for debugging the application system.
- Follow the Software Development Life Cycle and Agile methodology to develop projects.
- Performed Unit Testing using JUnit, used Log4j technology for logging and used Maven 2.0 as build tool for managing dependencies.
- Experience in Postman to test the API including collections and environments development.

- Responsible for the design and development of the framework. The system is designed using J2EE technologies based on MVC architecture. The Views are programmed using struts, JSP pages, Model is a combination of EJB's and Java classes and Controllers are Servlets.
- Developed user interface using JSP, jQuery, and AJAX to speed the application.
- Writing the JavaScript and designing the JSP GUI framework.
- Involved in developing EJB's for business logic and deploying them in Apache Tomcat.
- Responsible for creating Action classes, JSPs, Model classes.
- Used business delegate to call EJB from struts action class.
- Used JBoss application server to deploy the application into a Production environment.
- Extensive experience using framework APIs like Struts, Spring and Hibernate
- Used Java Messaging Services for the reliable and asynchronous exchange of important information.
- Deployed Application to BEA WebLogic server.
- Involved in designing the user interfaces using JSP.
- Used jQuery to make the frontend components interact with the JavaScript functions to add dynamism to the web pages at the client side.
- Extensively worked on spring's framework.
- Used JDBC for database connectivity with MySQL Server.
- Implement the presentation layer (GUI), based on open-source framework, involving Servlets, JSP, JSTL, JSF, CSS, HTML, JavaScript, and Beans.
- Designed Interactive GUIs using Java Applets and Swing.
- Developed Servlets and Worked extensively on SQL.
- Worked with MySQL for MySQL, SQLYog, and Workbench.
- Implementation of Spring IOC container, Spring JDBC template, Spring Exception Strategy and AOP.
- XML messages are used to communicate between web services that are written using SOAP and WSDL.
- Created different database objects (Stored Procedures, Functions, and Triggers) for the backend MS SQL server.

Environment - Java, Servlet, EJB, Struts, JMS, JDBC, Hibernate, Spring, JavaScript, AJAX, UML, Eclipse, OAuth2, AWS, EC2, Docker, Kubernetes, WebLogic, SOAP, JBoss, ANT, jQuery, NetBeans, JSP, EJB, WSDL, Toad, web services, HTML, XML, MS SQL, Junit, CVS, MySQL.
