With over 9 years of expertise, a comprehensive grasp of the software development life cycle (SDLC) is demonstrated, particularly in crafting Java-based enterprise web applications within the Agile framework. A strong grasp of essential Java APIs, including advanced elements like multithreading, lambda expressions, and streams, is evident. Proficient in Sprint-based SDLC methodologies, excellence is shown in creating dynamic user interfaces using React, Angular, HTML, CSS, and Bootstrap technologies. Microservices architecture, especially leveraging Spring Boot, RESTful API, Hibernate, Spring AOP, and Spring MVC is a standout area of proficiency Database familiarity includes Oracle, MySQL, and MongoDB, with an emphasis on rigorous testing using tools like JUnit, and Mockito. Incorporating Docker for efficient containerization and application management through Kubernetes, adept navigation of cloud environments is demonstrated, encompassing services from AWS and Azure. With a strong command of Git for version control and Jenkins for continuous integration, adherence to cloud architecture best practices is evident. This amalgamation of technical prowess and methodical approach enables the delivery of robust, efficient software solutions.

Work Experience

Senior AWS Full Stack Developer

Kaiser Permanente - Oakland, CA

January 2022 to Present

Kaiser Permanente, a healthcare provider organization, provides healthcare services to its members through a network of hospitals, clinics, and medical facilities. We are currently working on putting patient portals in place so that patients can access their medical records, make appointments, and talk to their healthcare providers.

Responsibilities

- # Built Automation Framework for Angular 12, and Node.js and engaged in testing components with Protractor.
- # Experience with using NPM to manage and build Angular 12 applications.
- # Created Reactive forms, performed validations using Angular 12, and tested using Jasmine.
- # Developed and maintained a web application using Python and Django, implementing new features, and improving existing functionality to enhance user experience.
- # Developed APIs using Python frameworks like Flask and Pyramid, integrating with other services, and building scalable systems.
- # Used Angular HTTP client to integrate frontend with backend.
- # Wrote Java 11 code, making use of its new features in building the Microservices architecture using Spring Boot.
- # Worked with the new features introduced in Java 11, such as the new Local-Variable Syntax for Lambda Parameters, which allows for better code readability and conciseness.

- # Experience working with other libraries and frameworks commonly used with Spring Boot, such as Spring Web Flux, and Spring Cloud.
- # Experience with other Spring Boot-related technologies such as Spring Data, Spring Security, and Spring Cloud, and the ability to use them to develop scalable and robust applications.
- # Worked with Elastic Load Balancing, Amazon RDS, and Amazon S3 to connect EKS with other AWS services.
- # Worked on different AWS services like S3, IAM, SNS, SQS, and Secrets Manager.
- # Webservices to extract customer information for validation.
- # Used Docker as a container tool for deploying Microservices.
- # Leveraged MongoDB, a document-oriented database, to securely store and manage diverse sets of data.
- # Proficiently designed object-to-Mongo mappings to facilitate efficient storage and retrieval of data about various domain objects.
- # API Web Services testing was implemented using the Postman tool.
- # Used Git, and Bitbucket as version control to manage the code repositories.
- # Experienced in writing Test cases and implementing unit test cases using testing frameworks like JUnit, and Easy Mock.
- # Strong Ability to design and implement end-to-end data pipelines using Kafka and related technologies, from data ingestion to storage and analysis..
- # Designed operational metrics that drove alarms and Grafana reports to maintain service health.
- # Used Maven as a build tool to manage dependencies.
- # Implemented Slf4J for application logging and troubleshooting issues in debug mode.
- # As part of the Agile Methodology, took part in sprint planning and sprint reviews to ensure the team was on track to meet the project's goals.

Environment: Agile, Angular 12, Node.js, Jasmine, NPM, Java 11, Python, Spring Boot, Spring Web Flux, Spring Cloud, PostgreSQL, EKS, AWS, Docker, Microservices, MongoDB, Postman, Junit, Easy Mock, Apache Kafka, Grafana, Maven, Splunk, Slf4J, Git.

AWS Full Stack Developer

Station Casinos - Las Vegas, NV

April 2020 to January 2022

Station Casinos offer many kinds of games, including slots, table games, poker, sports betting, restaurants, shows, and hotels. The company is more focused on providing high-quality, local gaming experience. Our project was to implement a centralized system inside the Station.

Casinos manage gift card issuance, redemption, and tracking.

Responsibilities

- # Developed and maintained web applications using ReactJS, Node.js, Spring Boot framework, and NPM for importing packages.
- # Strong understanding of React libraries and frameworks such as Redux, React Router, and Material-UI. Tested ReactJS Framework using Chai.
- # Worked with other libraries and frameworks that are commonly used with Spring Boot, such as Spring Data JPA and Spring Batch.
- # Used Java 1.8 technologies like Lambda Expressions to simplify the code and Stream API to improve performance and manage Azure Services.
- # Configured the project's build environment using Maven's POM file.
- # Integrated GitHub, Jenkins, and Jenkins Jobs with Maven to build and manage EAR, WAR, and JAR files for application servers.
- # Centralized configuration and logging with Spring Config Server and Splunk.

- # Microservices deployment with Concourse and Jenkins.
- # Used Kafka for Publish/Subscribe patterns in applications dealing with messaging.
- # Experienced in Test Driven Development and good experience in using unit test frameworks like JUnit and Mockito.
- # Proficiently managed and optimized AWS cloud infrastructure to support gift card systems, ensuring high availability and scalability.
- # Employed Amazon CloudFront to accelerate content delivery, ensuring fast and secure digital gift card content distribution to casino patrons.
- # Managed AWS resources efficiently to control costs, utilizing AWS Cost Explorer and AWS Trusted Advisor to monitor and optimize spending.
- # Utilized Amazon API Gateway to create and manage APIs, enabling secure and controlled access to gift card services for external applications and partners.
- # Experienced with deploying and scaling Docker containers using Kubernetes, including knowledge of Kubernetes pods, services, and deployments.
- # Used IntelliJ's built-in tools and plugins, such as the built-in terminal, and Maven integration, to streamline the development process.
- # Used Spring JPA to design entity data mapping with Oracle DB..
- # Managed data with NoSQL Cassandra efficiently managing high volumes of user activity logs.
- # Created Alerts, Reports, and Dashboards in Splunk and Catchpoint portals.
- # Used SLF4J's API to log messages in the application code in a consistent way across all classes and modules.
- # Customized log format and layout to match the project's requirements.
- # Used Postman for API testing.
- # Contributed to the SDLC process of gathering requirements, analyzing, designing, developing, and testing applications using the Agile methodology.

Environment: Agile, ReactJS, Node.js, Spring Boot, NPM, ReactJS, Chai, Java 1.8, AWS Cost Explorer, AWS Trusted Advisor, Kafka, Oracle DB, NoSQL Cassandra, Maven, GitHub, Splunk, Jenkins, Concourse, Docker, Kubernetes, IntelliJ, SLF4J, Postman, JUnit, Mockito.

Full Stack Developer

Moody's Analytics - Bangalore

September 2017 to April 2020

Moody's Analytics provides a range of financial services, including credit ratings and risk management solutions. Enhanced and provided a new look to the application that combines the data from the resources and automates reporting to regulatory authorities.

Responsibilities:

- # Migrated existing User Interface applications to Angular 6 along with Node.js, and NPM
- # Worked on the conversion of the applications from Spring MVC to Spring Boot microservices architecture.
- # Implemented default methods, and type interfaces for each using Java 1.8.
- # Worked on the conversion of an existing application to a Microservices architecture using REST APIs, Spring Boot.
- # Utilized JUnit for application testing.
- # Apache Tomcat was used to service WSDL requests.
- # Leveraged Azure Data Services, including Azure Data Lake Storage and Azure Synapse Analytics, to build a robust data analytics platform for processing and analyzing financial data, enhancing decision-making processes.

- # Utilized Power BI, integrated with Azure, to create interactive dashboards and reports for real-time financial data visualization.
- # Configured and optimized the Oracle DB database to ensure performance and scalability.
- # Authorized Users and Provided the Rest Security Template for Secure Communications between Microservices Using OAUTH 2.0.
- # Worked with SoapUI for analyzing and debugging requests/responses.
- # Used Maven to build the application.
- # Experienced in creating logs by using Slf4J to identify errors in the production test environment.
- # Postman was used for testing the APIs to facilitate the creation, distribution, testing, and documentation of the APIs and store basic and sophisticated HTTP queries and their responses.
- # Worked with Agile principles such as frequently delivering working software, embracing change, and collaborating with customers..

Environment: Agile, SpringMVC, Spring Boot, HTML5, CSS3, JavaScript, jQuery, Angular 6, Node.js, NPM, Java 1.8, Azure, Azure Data Lake Storage, Azure Synapse Analytics. Microservices, REST API, Maven, Slf4J, Apache Tomcat, OAUTH 2.0, SoapUI, JUnit, Postman.

Software Engineer

Hedge Equities Limited - Kochi, Kerala
November 2015 to September 2017

Hedge Equities is a financial services company based in Kochi, India. The company specializes in offering various financial products and services. Enhanced an application for clients to view their portfolios and amend them.

Responsibilities

- # Contributed to designing and programming a dynamic website utilizing HTML, CSS, JavaScript, Bootstrap, and jQuery.
- # Experience with integrating Spring MVC with other frameworks and technologies, such as Hibernate, Spring Security, and Spring Data.
- # Deployed and tested the Application on JBoss Server to validate it.
- # Utilized MySQL to manage customer support teams and summarize financial data.
- # Implemented Log4j for Error Logging, Debugging, and Monitoring by utilizing Loggers and Appender Components.
- # Created application code with Eclipse IDE and set up ANT and JUnit.
- # Engaged in the pre-testing of Web-Service calls using Postman.

Environment: Agile, Git, HTML, CSS, JavaScript, Bootstrap, jQuery, Spring MVC, MySQL, JBoss, Log4j, Eclipse IDE, ANT, JUnit, Postman.

Java Developer

Yiron Technologies Pvt Ltd - Pune
August 2014 to November 2015

Yiron Technologies is an IT product, Services, and consulting company based in Pune, India. It provides IT services to travel companies based in the Middle East and Africa. We developed an application called FACTS, which is accounting and tracking software for the Travel Industry.

Responsibilities

- # Developed an intuitive GUI and Web pages with HTML, CSS, and JavaScript
- # To establish relationships between application components, the Spring MVC Framework IOC design pattern is utilized.
- # Strong understanding of data types, operators, control structures, and exception handling in Java 1.6

Involved in multiple stages of SDLC, including the creation of design documentation, programming, unit testing, and Microsoft IIS deployment.

Wrote Maria DB Stored Procedures and complicated queries.

Log4j was used for Application-level Error logging and Debug statements to debug application problems.

Worked with SoapUI to analyze and debug requests/responses and developed JUnit test classes for module testing.

Experience in using ANT as a build tool to automate the build process, including compiling, packaging, and deploying code.

Environment: Agile Methodology, HTML, CSS, JavaScript, Maria DB, Microsoft IIS, Java 1.6, ANT

Education

Master of Science in Information Systems

Dakota State University - Madison, SD

Bachelor of Commerce in Accounts

Acharya Nagarjuna University

Skills

- Cloud Watch
Build Scripts & DevOps Tools: Maven
- Eclipse
Databases: Oracle DB
- Python
Web Technologies: HTML5
- Mongo DB
Messaging Tools: Apache Kafka
AWS: EC2
- Java
- Docker
- EKS
- Mockito
- RDS
- Jenkins
- Cloud Watch
- Node.js
- PostgreSQL
- ReactJS
IDE Tools: IntelliJ IDEA
- Bitbucket
- Log4j
- Azure Synapse Analytics
Testing Tools & Logging Tools: JUnit
- MySQL

- Angular 12
- ELB
- Kubernetes
Version Control: GitHub
- CSS3
- Ant
- CloudFront
Azure: Azure Data Lake Storage
- S3
- Slf4j
Monitoring Tools: Splunk

Certifications and Licenses

AWS Certified Developer - Associate
