

Manasvi Jain

Jainmanasvi78@gmail.com | 432-599-5338 | linkedin.com/in/manasvijain07 | https://github.com/manasvijain07

TECHNICAL SKILLS

- **Programming Languages:** Java, Python, C, C++, SQL, DQL
- **Databases:** SQL/ Relational databases - MySQL, Oracle, Postgres & NoSQL databases – Mongo DB, Redis, Dynamo DB
- **Web & API Development:** HTML 5, CSS 3, JavaScript, Angular JS, Angular 8, React, Bootstrap, Node JS, Spring, Spring boot, Spring Security, Spring Web, Spring MVC, Hibernate, Java Vaadin, REST API, GraphQL, XML, JSON, SOAP UI
- **Containerization & Version Control:** Docker, Kubernetes, GitHub (Git), Bitbucket, SourceTree
- **Cloud Services:** Amazon Web Services (AWS): EC2, Elastic load balancer, EBS, EFS, S3, AWS Lambda, RDS
- **Development Tools & Frameworks:** Jupiter Notebooks, JIRA, Apache Maven, PowerShell, JUnit, Mockito, Scrum, DOM, Gradle, Swagger, SharePoint, Bitbucket, Confluence, Eclipse, IntelliJ, Visual Studio Code, Postman, SQL Workbench, Apache Tomcat server, Splunk, Linux, Unix, SQL server, SQL Workbench

EXPERIENCE

Software Engineer, ITMC – American Express – Tempe, Arizona Aug 2024 - Present

- Contributed to modernizing **debit card transaction processing system** to a **scalable microservices-based architecture** using **Java and Spring Boot**, ensuring the system handled over **1 million transactions per day** with **99.99% uptime**.
- Migrated critical network functions to the **AWS Cloud**, leveraging **EC2, S3, and Elastic Load Balancer**, achieving **99.99% uptime** and **25% lower latency** during high transaction volumes.
- Streamlined deployment processes with **Jenkins CI/CD pipelines**, reducing network updates and maintenance windows
- Leveraged **Kibana** for root cause analysis for incident management, reducing time to resolution by **30%** in high-severity outages
- Integrated **Drools** with **Spring Boot microservices**, enabling dynamic rule updates without requiring redeployment, ensuring **99.9% system uptime** during regulatory changes.
- Developed and maintained comprehensive test suites using **JUnit** and **Mockito**, achieving a test coverage of **95%**

Lead Software Engineer, ITMC - Bristol Myers Squibb – Tempe, Arizona Mar 2024 – Aug 2024

- Spearheaded the development of a **pharmaceutical data analytics platform**, utilizing **Java 8** and **Spring Boot** for backend services, enhancing data processing capabilities by 30%.
- Designed **RESTful APIs using Spring Rest & Spring Security**, facilitating seamless & secure data exchange within the platform.
- Architected a **microservices-based architecture** with **Docker** and **Kubernetes**, ensuring scalable and **resilient deployment**, and managing the end-to-end delivery of the project.
- Implemented **AWS solutions** using **EC2, S3, & RDS**, to handle large-scale data processing needs, achieving 99.9% system uptime
- **Collaborated with cross-functional teams**, including data scientists, analysts, and product managers, to integrate user feedback and continuously improve the platform, resulting in a 20% increase in user satisfaction.
- **Implemented robust security measures**, including **OAuth2 and JWT**, to ensure secure **authentication and authorization**, protecting sensitive pharmaceutical data.

Technical Lead Software Engineer, Tata Consultancy Services – San Antonio, Texas Jan 2021 - Dec 2023

- Led a Scrum team to modernize an **insurance claims application** using backend technologies as **Java 8, Spring Boot**, and frontend as **Angular**, increasing system efficiency by over 25% through **RESTful API**
- Engineered highly **scalable cloud solutions** with **AWS** services using **EC2, and Elastic Load Balancer**, boosting application performance by 40% and system reliability by 99.9%
- Cultivated a culture of technical excellence, **mentoring 15 developers** in best practices and **advanced coding standards** for emerging technologies such as **containerization** with **Docker** and **Kubernetes**, increasing collaborative team productivity by 30%
- Integrated user feedback loops and **Agile methodologies** for product refinement, boosting **customer satisfaction** scores by 60%
- Streamlined project delivery by managing **code reviews**, sprint planning, **unit testing** and defect resolution, reducing effort by 30%
- **Aligned project goals with business objectives**, boosting stakeholders' satisfaction by 15% through seamless communication

Software Developer, ResilienX – Syracuse, New York May 2019 - Nov 2020

- Engineered a **microservices-based** fault detection system for Unmanned aircraft, utilizing **Java, Spring Boot and Angular**, achieving a 90% fault detection accuracy rate through innovative system design
- Architected **REST API solutions** with **token-based authentication and authorization**, enhancing security and data protection
- Boosted deployment efficiency by 20% with Continuous Integration/Continuous Deployment (CI/CD) pipelines- Jenkins & Docker
- **Optimized SQL queries**, improving data retrieval speeds by 35% and ensuring **efficient database management** under high loads

- Designed **modular, reusable components** & conducted **debugging** ensuring high-quality deliverables & bug reduction by 60%
- Crafted **responsive UI features** using **Java Vaadin, Angular, JavaScript & other web technologies**, enhancing user experience
- Employed **Hibernate framework** for efficient **object-relational mapping (ORM)**, resulting in a 30% reduction in database operation time and enhancing development productivity

Full Stack Software Developer, Cognizant Technology Solutions – Pune, Maharashtra

Feb 2016 – Dec 2018

Spearheaded the software development lifecycle for a distributed Life Science project, utilizing Java, Node.js, Docker, and AWS, achieving a 45% performance boost and a 20% reduction in downtime through strategic optimizations and **Agile methodologies**

- Developed **batch scripts** to streamline microservices deployment, improving efficiency and reducing service startup times by 50%
- Implemented **application load balancing across five AWS EC2 instances** using **Elastic Load Balancing**, optimizing cloud resource utilization and enhancing system responsiveness by 30%, thereby ensuring scalable and efficient performance
- Led the adoption of **GraphQL** for **API data fetching**, slashing network load & enhancing data processing efficiency by 88%
- Bolstered application security by seamlessly integrating **OAuth2 and JWT for robust authentication and authorization measures**, effectively neutralizing 99% of potential security breaches
- Facilitated **cross-functional team collaborations** to refine product features based on user feedback, utilizing Agile practices and **JIRA** for project management, leading to a 40% increase in market alignment and customer satisfaction

EDUCATION

Syracuse University

Jan 2019 - Dec 2020

Master of Science in Computer Science | **GPA** – 3.4 out of 4

Coursework - Design Analysis Algorithm, Object Oriented Design, Operating System, Computer Architecture, Database

Rajiv Gandhi Technical University

Aug 2011 - May 2015

Bachelor of Technology in Computer Science | **CGPA** – 8.44 out of 10

Coursework - Cloud Computing, Algorithms, Data Structures, Operating Systems, Web Engineering, Computer Networks
