

Siddiq Pasha S M
Senior Windows, Azure & VMware Engineer
siddiq.pasha@outlook.com
+1(279)243-0405

Profesional Summary

System Administrator with over 14+ years of experience in Systems Engineering and Virtualization, specializing in VMware technologies and Active Directory management in enterprise environments. Proven expertise in infrastructure design, operational management, and automation through PowerShell scripting. Skilled in implementing and supporting Microsoft Azure cloud services and managing MOVEit Automation workflows for secure file transfers. Adept at leading teams, coordinating with stakeholders, and delivering high-quality IT solutions in hybrid-cloud and data center environments.

- **Systems Engineering & Virtualization:**

- Administer and maintain VMware vSphere (6.x/7.x/8.x) environments including ESXi host management, vCenter administration, HA/DRS/FT configuration, and cluster lifecycle operations using VMware Lifecycle Manager.
- Manage vSAN-backed clusters and support hyper-converged infrastructure including Dell EMC VxRail nodes, firmware compliance, health monitoring, and hardware lifecycle coordination.
- Support VMware Cloud Foundation (VCF) environments including workload domain management, SDDC Manager operations, distributed virtual switches, and infrastructure upgrades.
- Administered Microsoft Hyper-V clusters including VM provisioning, live migration, cluster validation, and storage configuration.

- **Windows Server Administration:**

Managed over 2500+ Windows Servers (2012/2016/2019/2022) ensuring performance, uptime, and compliance. Provided routine maintenance, patching, and disaster recovery support using WSUS and Tanium, achieving up to 95% patch compliance. Resolved hardware/software issues onsite, improving system reliability.

- **Active Directory & Infrastructure Management:**

Designed, migrated, and consolidated multi-site AD environments, including domain controller promotions, FSMO role transfers, and cleanups. Administered user/group lifecycle, GPOs, DNS, DHCP, DFS, and login scripts. Improved domain performance by removing stale objects and auditing NTFS permissions.

- **Microsoft Azure Administration & Cloud Services (L2):**

Administer and support Azure infrastructure and hybrid-cloud environments as an L2 Engineer, including resource management, virtual networks, storage, and compute services. Implement role-based access control (RBAC), monitor resources, troubleshoot connectivity and performance issues, and optimize workloads. Completed **AZ-104** and **AZ-801** certifications, demonstrating proficiency in Azure administration, governance, and hybrid management scenarios.

- **Vulnerability, PCI Compliance & Patch Management**

- Manage end-to-end Windows vulnerability and patch lifecycle—including planning, testing, deployment, automation, and validation—using WSUS, SCCM, Tanium, BladeLogic, Qualys, Tenable, and Rapid7; analyze and prioritize CVE/CVSS findings, coordinate remediation with security/infrastructure teams, troubleshoot patch failures via log analysis, and enforce CIS/Microsoft-aligned OS hardening to eliminate recurring security gaps and maintain consistent compliance.
- Ensure adherence to PCI-DSS Requirement 6.2, CIS benchmarks, and internal security standards by maintaining timely patching, enforcing GPO-based security baselines, remediating misconfigurations (TLS/SSL/SMB/registry), monitoring patching platform health (WSUS, SCCM, Tanium), generating compliance dashboards, maintaining documentation, providing audit-ready evidence, and supporting incident response for security-related Windows server issues.

- **Automation Scripting & Performance**

- Automated VM provisioning, snapshot management, compliance reporting, and health checks using PowerShell and PowerCLI scripting.
- Conducted infrastructure capacity planning and performance analysis using vCenter performance metrics to forecast CPU, memory, and storage growth.

- Troubleshoot complex performance issues related to resource contention, storage latency, and network bottlenecks across clustered environments.
- **MOVEit Transfer & Automation:**
Installed, maintained, and optimized MOVEit Automation for secure file transfers using SFTP, FTPS, and HTTPS. Reduced manual processes by 40% and enhanced data security. Configured user access, created automated jobs, resolved connectivity issues, and upgraded software versions to maintain compliance.
- **Storage L1/L2 Support:**
Supported SAN environments, monitoring alerts, performing diagnostics, and coordinating with vendors for hardware replacement (disks, SFPs). Handled basic SAN switch tasks, Brocade port-down issues, and file restores from snapshots. Maintained documentation and worked closely with backup and data center teams.
- **Server and Data Center Hardware:**
Deep experience with Intel x86/x64, HP, IBM, Dell, and Cisco devices. Oversaw installation, troubleshooting, and maintenance of server farm hardware in production and test environments.
- **Monitoring & Reporting:**
Utilized system performance tools to monitor infrastructure, configured alerts, generated reports for audits, and documented operational procedures and troubleshooting steps for knowledge base use.

Technical Skills

- **Operating Systems:** Windows Server 2003/2008/2012/2016/2019/2022, Windows Azure
- **Virtualization:** VMware vSphere 6.x/7.x/8.x, ESXi, vCenter, VMware Cloud Foundation (VCF), vSAN, NSX (Conceptual Knowledge), Dell EMC VxRail, Microsoft Hyper-V
- **Scripting & Automation:** PowerShell, PowerCLI,
- **Infrastructure Services:** Active Directory, DNS, DHCP, DFS, Group Policy, IIS, File/Print Services
- **Switches:** Brocade G620, 720, 7840, G610, Cisco MDS 9200, 9500, 9100 multi-layer switches.
- **Hardware:** HP, Dell, IBM, Cisco (Tower/Rack Servers, ILO Management)
- **Tools:** SCCM, BBSA (BMC Server Automation, formerly BladeLogic Server Automation, WSUS, BatchPatch, Performance Monitor, Resource Monitor, RAMMap, SCOM, MOVEit Automation, Symantec/McAfee/Traps/CrowdStrike/Tanium, VMware Lifecycle Manager, Dell OMIVV, SDDC Manager, SCCM, ServiceNow
- **Networking:** vNetwork Standard/Distributed Switches, VLANs, Firewall Coordination
- **Cloud Technologies:** Azure DevOps, AWS, Git, Ansible, Docker, Terraform.
- **Storage & Backup:** NetApp, Dell EMC, IBM, Cleversafe, Isilon, Nasuni, HP3PAR, NetBackup, Rubrik.

Education

Bachelor of Engineering: - ECE from Bangalore University Bangalore, India.

Certification & Courses

- Microsoft Certified Solutions Associate (MCSA)
- Microsoft Certified Windows Server Hybrid Administrator Associate
- Microsoft Certified: Azure Administrator Associate
- **Udemy courses completed:**
 - The Complete Nutanix Private Cloud Solution Bootcamp
 - VMware Certified Professional - Data Center Virtualization 2023
 - Ansible for the Absolute Beginner - Hands-On – DevOps
 - Linux Crash Course for Beginners – 2026 & Linux Redhat Certified System Administrator (RHCSA - EX200)
 - MS-900 Microsoft 365 Certified: Fundamentals & Intune (MDM / MAM) Microsoft training course with HANDS ON

Professional Experience

Cognizant Technology Solutions

Role: Senior Windows & VMware Administrator, Rocklin CA, United State & Bangalore, India

Duration: March 2017 – Present

Key Responsibilities and Achievements:

- Windows Server Administration: Managed 2,500+ Windows Server 2016/2019/2022 systems, ensuring high availability, performance, and security compliance across environments, including legacy support for Windows Server 2012.
- Patch & Vulnerability Management: Administered WSUS and Tanium for patch deployment, achieving 95% patch compliance and reducing vulnerabilities through automated updates.
- Virtualization Management: Led VMware vSphere (6.7/7.0) and Hyper-V environments, optimizing resource utilization by 30% and performing P2V/V2V migrations, vSwitch management, and storage vMotion for enhanced performance.
- File Transfer & Automation: Implemented and maintained MOVEit Transfer and Automation, designing secure file transfer workflows (SFTP, FTPS, HTTPS), reducing manual tasks by 40% and increasing data security.
- Active Directory & Security: Managed Active Directory in multi-site environments, overseeing user/group management, GPO administration, domain controller deployments, and MFA implementation.
- Managed PKI/Certificate Services tasks including certificate enrolment, renewals, template updates, and troubleshooting auto-enrolment issues for secure authentication.
- Implemented Microsoft Defender and GPO-based security baselines, improving endpoint hardening, RBAC alignment, and security posture visibility across Windows environments.
- Supported modern endpoint management by assisting with policy enforcement, compliance checks, and device governance through Intune/SCCM hybrid environments.
- Collaborated with security teams to configure and validate Azure AD Conditional Access rules for MFA, compliant devices, and identity-based access controls.
- Applied Zero Trust principles by enforcing least-privilege access, MFA, hardened GPO configurations, and continuous verification in identity and endpoint workflows.
- Infrastructure & Storage Management: Led SAN/NAS support (NetApp, Dell EMC, HP 3PAR), performed RAID rebuilds, snapshot management, and disaster recovery testing. Administered DNS/DHCP infrastructures and ensured operational continuity.
- Migration Projects: Led Windows Server migration projects, including OS upgrades (2003–2022), file server migrations, Active Directory migrations, and permissions audits. Developed PowerShell scripts to automate tasks and streamline migration processes.
- Provided infrastructure support for PeopleSoft Web, App, and Process Scheduler servers, including OS patching, middleware updates, and service restarts.
- Assisted DBAs and application teams with People Tools upgrades, environment refreshes, and system integrations.
- Monitored PeopleSoft logs/services, troubleshooting authentication, connectivity, and batch job failures.
- Team Leadership & Collaboration: Managed a 10-member Windows support team, coordinated offshore delivery, and represented the team during P1 incidents. Collaborated with vendors and application teams to resolve complex issues.
- Administered SharePoint Server/SharePoint Online environments including permissions, site access, quota and storage management.
- Supported SharePoint backend infrastructure (IIS, authentication, SQL connectivity), resolving access and service issues.
- Coordinated cumulative updates, farm patching, and feature deployments with application teams.
- System Monitoring & Reporting: Utilized tools like ServiceNow, SCOM, and SolarWinds to monitor system health, configure alerts, and generate reports for proactive incident management and performance tuning.
- Data Center Operations: Installed, configured, and maintained data center infrastructure, including server setup, iLO configuration (HP, Dell, IBM), structured cabling, and asset management.
- Technical Support & Documentation: Provided end-user support for hardware, software, VPN, and mobile devices. Created comprehensive technical documentation and conducted user training for MOVEit platform and troubleshooting procedures.

➤ On-Site Experience at Brisbane Australia:

- **Provided comprehensive on-site IT support**, including prompt resolution of daily user issues to minimize downtime, maintenance of IT applications for optimal performance and accessibility, and management of ID card printing tools to uphold access control standards.
- **Handled end-to-end data center operations**, including server installation and configuration (iLO for HP, Dell, IBM), structured cabling and patching for Cisco switches, tape backup management, and assistance in deploying wireless Access Points in coordination with offshore network teams.

Tata Consultancy Services Limited

Role: L2 - System Administrator, Pune, India

Duration: August 2012 - March 2017

Roles & Responsibilities:

- Deployed and managed Windows Server environments (2003–2019) across physical and virtual platforms, utilizing tools like BMC BladeLogic for patch management and Windows Performance Monitor for proactive system optimization.
- Led file server migrations and Active Directory administration, including FSMO role management, OU creation, DNS configuration, and GPO enforcement, ensuring seamless transitions and compliance.
- Administered Hyper-V and VMware infrastructures, including P2V migrations, VM provisioning, resource optimization, and datastore management, enhancing system scalability and performance.
- Configured and supported iLO for HP, Dell, and IBM servers, handling remote troubleshooting, server lifecycle operations, and performance monitoring to ensure high availability.
- Supported SharePoint environments at the infrastructure level, managing permissions, authentication, IIS/SQL connectivity, and site-related troubleshooting.
- Provided OS-level and infrastructure support for PeopleSoft application servers, applying patches, managing services, and troubleshooting issues.
- Managed Websense Web Security (Forcepoint), enforcing DLP policies, configuring Content Gateway, and generating audit reports to maintain compliance and safeguard the network.
- Provide first-line support for Exchange Online and Microsoft 365, handling mailbox provisioning, license assignments, MFA/login issues, Outlook troubleshooting, and resolving basic mail flow problems.
- Monitor service health via the Microsoft 365 Admin Center, run approved PowerShell scripts, manage group memberships, and document recurring issues for the knowledge base; escalate complex issues to L2/L3 teams.
- Monitor Exchange Server health, mail flow, and service availability using EAC or monitoring tools; log and escalate incidents such as DAG replication failures, mail queue buildup, or outages.
- Deliver basic mailbox and Outlook support, perform mailbox status checks, track SSL certificate expirations, assist in generating reports, and document all activities in ITSM tools like ServiceNow.
