

VAMSI KRISHNA ARADALA

Sr. Business Analyst / Business Data Analyst | vamsiaradala@gmail.com | +1 (205) 829-5543 | linkedin.com/in/vamsiaradala

Professional Summary:

- Senior Business Analyst / Data Analyst with **5+ years of experience** delivering end-to-end analytics and business intelligence solutions by transforming complex business needs into scalable, data-driven systems that support strategic decision-making.
- Strong expertise in **Requirements Gathering** and stakeholder collaboration, including BRD/FRD creation, user stories, acceptance criteria, and JAD sessions to ensure alignment between business objectives and technical delivery.
- Advanced proficiency in **SQL** across **SQL Server, PostgreSQL, MySQL**, and Snowflake for data validation, performance tuning, analytical reporting, and troubleshooting large and complex datasets.
- Proven ability in designing high-impact dashboards and reports using **Power BI** and Tableau, applying advanced DAX, Power Query, data modeling, and visualization best practices for executive-level insights.
- Extensive experience in building and maintaining robust ETL pipelines using **SSIS, Azure Data Factory, and SQL** workflows to enable reliable, automated, and high-quality data integration.
- Strong background in data warehousing concepts including dimensional modeling (fact and dimension tables), source-to-target mappings, and implementation of row-level security and role-based access controls.
- Demonstrated expertise in improving data quality through profiling, cleansing, root cause analysis, and automation, significantly enhancing reporting accuracy and operational efficiency.
- Hands-on experience in **UAT, SIT**, and regression testing by creating detailed test cases, validating business logic, managing defects, and ensuring production-ready BI solutions.
- Skilled in creating comprehensive technical documentation such as data dictionaries, **ER diagrams, process flows, workflow diagrams**, and ETL mappings to support development and knowledge transfer.
- Results-oriented professional with strong analytical, communication, and problem-solving skills, consistently delivering data-driven insights that drive business performance, compliance, and operational excellence.

Technical Skills:

- **Requirements & Business Analysis:** BRD, FRD, User Stories, Acceptance Criteria, JAD sessions, GAP Analysis, SWOT Analysis, Process Mapping, Root Cause Analysis, Impact Analysis, Stakeholder Management, UAT & SIT.
- **Databases & Data Analysis:** SQL, T-SQL, SQL Server, PostgreSQL, MySQL, Snowflake, Stored Procedures, Views, Triggers, Data Validation, Data Profiling, Data Quality & Cleansing.
- **Business Intelligence & Visualization:** Power BI, Tableau, Cognos, WebFOCUS, DAX, Power Query, Power Pivot, Power View, Drill-through, RLS, Dashboard Design, Executive Reporting.
- **ETL, Data Integration & Warehousing:** SSIS, Azure Data Factory, ETL Pipelines, Source-to-Target Mapping, Dimensional Modeling (Fact & Dimension Tables), Data Warehouses, Data Dictionaries.
- **Programming, Automation & Scripting:** Python, C#, Power Automate, SQL Automation, Custom Visuals, Data Transformation Scripts.
- **Cloud, Security & Performance:** Microsoft Azure, Azure AD Connect, Identity Management, SQL Profiler, Nagios, Database Performance Tuning.
- **Agile, Testing & Tools:** Agile/Scrum, JIRA, TFS, Test Case Design, Defect Tracking, A/B Testing, Excel (Pivot, VLOOKUP, INDEX-MATCH), MS Visio, ER Diagrams, UML, Documentation.

Educational Details:

Master of Science (M.S.) in Computer Science

- St. Francis College | Brooklyn, NY USA | Aug 2025

Bachelor of Technology (B.Tech.) in Computer Science

- Lovely Professional University | Punjab, India

Certifications:

- Microsoft Certified: Azure Fundamentals (AZ-900) | Credential ID: I409-9082
- Microsoft Business Analyst Professional Certificate | Udemy
- Scrum Certification – In progress
- Object-Oriented Programming Using Python (NPTEL)

Professional Experience:

ENGIE

Apr 2024 – Current

Sr. Business / Data Analyst

Norwood, MA

- Researched, elicited, and documented business, functional, and non-functional requirements by collaborating with operations, compliance, and IT stakeholders, authoring **Business Requirement Documents (BRD)**, **Functional Requirement Documents (FRD)**, user stories, and acceptance criteria to support business intelligence and analytics initiatives.
- Participated in **Joint Application Development (JAD)** sessions and requirements-gathering workshops with cross-functional teams to clarify business workflows, validate system behaviors, and translate stakeholder needs into actionable technical specifications.
- Performed comprehensive data analysis using **SQL**, **Excel**, and analytics tools to identify trends, data gaps, and process inefficiencies, improving reporting accuracy and data quality through targeted profiling and cleansing activities.
- Designed and developed interactive **Power BI** dashboards tracking multiple KPIs and business metrics, implementing **Power Query**, **Power Pivot**, **Power View**, and complex **DAX functions** to enable data-driven decision-making and executive-level reporting.
- Built and maintained **ETL workflows** using **SQL Server Integration Services (SSIS)**, creating data flow and control flow tasks with **C# scripts** to extract, transform, and load data from **Excel spreadsheets**, **XML sources**, and flat files into target data warehouses.
- Developed optimized **SQL queries**, **stored procedures**, **triggers**, **views**, and **user-defined functions** using **T-SQL** across **SQL Server**, **PostgreSQL**, and **MySQL** databases to support analytical reporting, data validation, and troubleshooting efforts.
- Contributed to **Agile development cycles** through active participation in **Scrum ceremonies** including Sprint Planning, Daily Standups, Sprint Reviews, and Retrospectives while creating and prioritizing user stories in **JIRA** and **Team Foundation Server (TFS)**.
- Created multi-dimensional data models with fact tables and dimension hierarchies, developed **source-to-target mappings**, and implemented **row-level security** and **role-based access controls** in **Power BI** and **Tableau** to ensure proper data governance and compliance.
- Conducted **GAP analysis**, **SWOT analysis**, and trend assessments to support strategic business planning, performing root cause analysis on data discrepancies and collaborating with development teams to implement permanent resolutions.
- Documented technical specifications including data dictionaries, workflow diagrams, **ER diagrams**, data models, and **ETL process mappings** to support development activities and facilitate knowledge transfer across project teams.
- Supported **User Acceptance Testing (UAT)** and **System Integration Testing (SIT)** across multiple releases by writing test cases, executing **A/B testing** using **SQL** and **Snowflake**, validating reports and dashboards, logging defects, and verifying fixes prior to production deployment.
- Configured data integration pipelines using **Azure Data Factory**, connected reporting platforms including **Cognos**, **WebFOCUS**, and **Tableau** to diverse data sources, and utilized **Azure AD Connect** for identity management and synchronization tasks.
- Monitored database performance using **SQL Profiler** and **Nagios**, executed database maintenance tasks including integrity checks, statistics updates, and re-indexing operations, while identifying automation opportunities to reduce manual effort and improve operational efficiency.

DXC Technology

Jan 2022 – Jul 2023

Business Analyst / Intelligence Analyst

Bangalore, IN

- Gathered and documented business requirements through **Joint Application Development (JAD)** sessions, translating complex needs into technical specifications, user stories, and acceptance criteria. Facilitated **Agile ceremonies** to ensure alignment between business objectives and development deliverables.
- Performed **SQL-based data analysis** to investigate system discrepancies, validate data integrity, and troubleshoot application defects. Designed optimized queries to extract key performance indicators and support data-driven decision-making.
- Designed and developed interactive **Power BI** dashboards by importing data from **SQL Server**, **Excel**, and **SharePoint**, creating data models and implementing **DAX** measures. Built custom visualizations using **Python** scripts for HR, project management, and operational metrics.
- Built advanced analytical solutions using **Tableau** with statistical functions, trend lines, and forecasting capabilities. Created **Tableau extracts** with scheduled refreshes, implementing dashboard actions, filters, hierarchies, and **Top-N** analysis for dynamic data exploration.
- Conducted end-to-end requirements analysis by collaborating with stakeholders to understand processes, identify gaps, and define solutions. Created process flows, **UML diagrams**, and workflow documentation in **MS Visio** to communicate system behaviors.
- Wrote test cases and supported **System Integration Testing (SIT)** and **User Acceptance Testing (UAT)** by validating system behavior, logging defects, and coordinating resolutions. Performed regression testing to ensure quality releases.

- Implemented data quality improvements through data cleansing and transformation in **Power Query**, establishing validation checks to identify inconsistencies. Reduced manual validation efforts through automated **SQL** queries and quality control processes.
- Developed **Power BI** visualizations with drill-through reports, drill-down capabilities, and cascading parameters, implementing **Row-Level Security (RLS)**. Published reports to **Power BI Service** with scheduled refreshes using **Data Gateway** and optimized performance using **DAX Studio**.
- Created technical documentation including data dictionaries, **data warehouse** schemas with fact and dimension tables, mapping specifications, and **traceability matrices**. Supported knowledge transfer and team onboarding through comprehensive documentation.
- Automated business intelligence processes using **Power Automate** for scheduled data flows and **Python scripts** for data extraction and transformation. Configured report distribution mechanisms to ensure stakeholders received timely insights with minimal manual intervention.
- Conducted impact assessments for system changes by analyzing dependencies, evaluating risks to workflows and data pipelines. Performed gap analysis to identify inefficiencies and coordinated with teams to develop mitigation strategies.
- Designed analytical dashboards across **Power BI** and **Tableau** platforms, creating data blends from multiple sources with advanced features like statistical calculations. Migrated legacy reports to modern BI platforms and tracked project health through metrics visualizations.

Star Health Insurance

Business Data Analyst

Mar 2020 – Dec 2021

Mumbai, IN

- Performed **SQL**-based data validation across multiple datasets involving **500K+ records** to identify discrepancies, analyze root causes, and ensure accuracy in downstream reporting and compliance analytics.
- Designed and developed **Power BI** and **Tableau** dashboards utilizing **DAX** measures, calculated columns, and complex **SQL** queries to deliver real-time operational and business performance insights for **10+ leadership stakeholders**.
- Gathered and analyzed business requirements from global stakeholders across multiple regions through **JAD sessions**, interviews, and workshops, translating business needs into functional specifications, **BRDs**, and automated analytics solutions.
- Analyzed system workflows, business processes, and data structures to identify logic gaps, mapping issues, integration inconsistencies, and process dependencies across operational modules supporting enterprise business intelligence initiatives.
- Developed technical documentation including process flows, data mapping specifications, **use cases**, **user stories**, system diagrams (**MS Visio**), **activity diagrams**, and functional requirements to support system enhancements and reporting automation.
- Conducted impact assessments, **SWOT analysis**, and **gap analysis** (current and future state) for system and reporting changes by evaluating upstream and downstream data dependencies, integration touchpoints, and cross-functional workflow implications, reducing audit **discrepancies by 18%**.
- Built **SQL**-driven analytical models, **stored procedures**, data models, and automated reporting solutions to reduce manual processing efforts and improve data accuracy and timeliness.
- Developed comprehensive test plans for **ETL** processes and supported **UAT** and **SIT** testing cycles by writing technical test cases, validating business logic, troubleshooting defects, and verifying database-level data integrity throughout the **SDLC**.
- Collaborated with cross-functional **Agile** teams, **QA** teams, and stakeholders to gather and document business requirements, translating them into user stories, acceptance criteria, and functional specifications using **JIRA** for backlog management.
- Performed ad-hoc data analysis and investigations using **SQL**, **Excel** (pivot tables, **VLOOKUP**, **INDEX-MATCH**), and analytics tools to validate data quality, integration requirements, and support operational reporting and management insights.
