SUMMARY

Over 6.4 years of expertise in developing and deploying scalable web applications using Java, Spring Boot, Angular, and AWS. Demonstrated proficiency in designing and implementing cloud-based microservices architectures on platforms like Google Cloud Platform (GCP) and AWS, optimizing system performance and reducing infrastructure costs. Extensive hands-on experience in building RESTful APIs, integrating third-party services, and automating workflows using CI/CD pipelines with tools like Jenkins, GitLab CI, and Terraform. Proficient in front-end technologies such as React.js and Angular, with a solid ability to create dynamic, responsive user interfaces and ensure seamless integration with back-end systems. Experienced in containerization using Docker and Kubernetes, enabling efficient deployment and management of services across multiple environments. Expertise in database management, including relational databases like PostgreSQL and MySQL, as well as NoSQL databases like DynamoDB, ensuring optimal data storage and retrieval. Adept at working in Agile environments, contributing to sprint planning, daily stand-ups, and retrospectives to meet project deadlines and deliver high-quality solutions. Experienced in collaborating with cross-functional teams, including DevOps, QA, and business stakeholders, to provide end-to-end project solutions. Strong problem-solving skills and a track record of troubleshooting and optimizing applications to improve performance and reliability. We are committed to providing innovative, secure, scalable solutions that drive business success and meet customer needs.

SKILLS

Programming Languages	Java 8/11/17, PL/SQL, SQL, NoSQL, Python
Frameworks	Spring Boot, Spring Data JPA, Spring Security, Spring REST
Front-End Technologies	React.js, Angular, Java Swing
Cloud Platforms	Google Cloud Platform (GCP), AWS (RDS, S3, Lambda, CloudWatch), Firebase
Microservices Architecture	Microservices with Spring Boot, RESTful APIs
CI/CD	Jenkins, GitLab CI, Cloud Build, Cloud Run, Terraform
Containerization	Docker, Kubernetes, Helm
Databases	PostgreSQL, MySQL, Oracle, AWS RDS, DynamoDB
Caching	Redis, EHC ache
Version Control	Git, GitHub, GitLab, Google Cloud Source Repositories
Testing Tools	JUnit, Mockito, Cucumber, Google Cloud Test Lab, JMeter
Message Brokers	Apache Kafka, Amazon SQS, Google Pub/Sub, RabbitMQ
Automation Tools	Terraform, Jenkins, GitLab CI, Google Cloud Scheduler, Cloud Build, Deployment Manager
Monitoring Tools	Prometheus, Grafana, Google Cloud Stack Driver Monitoring, Cloud Logging
Agile Tools	JIRA, Confluence, Agile Methodologies (Sprint, Stand-ups, Retrospectives, etc.)
Security	OAuth 2.0, Spring Security, Role-Based Access Control (RBAC)
Development Tools	Maven, Gradle, VS Code, Eclipse IDE
Operating Systems	Linux/Unix

PROFESSIONAL EXPERIENCE

Atlanticus Holdings Corporation, Atlanta, Ga
Sr Java Developer

March 2023 to till date

Roles & Responsibilities

- Built cloud microservices and implemented back-end using Spring Boot for contract testing, deploying on Google Cloud Platform (GCP).
- Worked with Microservice architecture using Spring Boot to modularize code and implemented Rest APIs using Spring Rest.
- Integrated Swagger API for Spring Boot documentation.
- Used Cloud Build and Cloud Run to automate continuous delivery pipelines, deploying microservices in GCP.
- Unit testing with Junit 5, component testing with Cucumber, and Google Cloud Test Lab for scalable testing.

- Implemented automatic API documentation using Swagger OpenAPI specification.
- Configured GCP Pub/Sub for reliable, asynchronous messaging between microservices and used Cloud Logging to track events and errors.
- Integrated React.js for front-end development, building responsive and interactive user interfaces and implemented Redux state management.
- Developed dynamic, modular front-end features using Angular, creating reusable components and integrated REST APIs.
- Set up Firebase for hosting and real-time database services to handle front-end applications and sync user data across platforms.
- Used Jenkins for CD/CI pipelines to build the project upon passing test cases, with deployments on Google Kubernetes Engine (GKE).
- Deployed the application stack on Google Cloud using Terraform and Deployment Manager for infrastructure automation.
- Utilized Redis cache for in-memory data clusters to optimize Google Cloud Functions performance and reduce response times.
- Implemented logging frameworks using slf4j and log4j with various log levels, including debugging and info.
- Used Google Cloud Source Repositories for version control, maintaining a merge request policy with different branches for different environments.
- Implemented contract testing between API providers and consumers using Pact.
- Integrated Lombok to reduce boilerplate code for POJOs and manage Java entities.
- Used GCP Cloud Scheduler to automate batch jobs and tasks across microservices.
- Created and managed Google Cloud SQL instances with PostgreSQL databases to support dynamic APIs and internal purposes.
- Developed PL/SQL packages and UNIX shell scripts for data migration and batch processing on GCP VM Instances.
- Used Google Stack Driver Monitoring to track performance and log critical application events.
- Worked with React.js and Angular for the front end, implementing dynamic web applications and improving performance with code splitting and lazy loading.

Environment: Java 11/17, JUnit 5, JWT, OAuth 2.0, JIRA, Google Cloud Pub/Sub, Cloud Build, Cloud Run, Jenkins, SonarQube, Cucumber, GCP Cloud SQL, GKE, Terraform, Firebase, React.js, Angular, GCP Cloud Scheduler, Swagger API, PostgreSQL, Maven, Dagger, Lombok.

HCL Technologies Chennai, India

Sep 2021 - Dec 2022

Java Developer

Roles & Responsibilities

- Integrated third-party APIs and external services into Java applications, enhancing system functionality and enabling seamless data exchange with external platforms.
- Automated monitoring and alerting for Java applications using Prometheus and Grafana, reducing incident response times and improving system uptime.
- Leveraged Spring Security to implement role-based access control (RBAC), ensuring secure user access and adherence to compliance requirements.
- Implemented caching mechanisms using EHCACHE and Redis, reducing database load and improving application response times.
- Configured Kubernetes Helm charts for automated deployment and management of microservices, streamlining the deployment process.
- Developed unit and integration tests using JUnit and Mockito, ensuring high code quality and reducing defects in production.
- Migrated legacy codebase from Java 8 to Java 11, improving application performance and security while adopting modern Java features.
- Collaborated with cross-functional teams, including DevOps, QA, and business analysts, to deliver end-to-end project solutions promptly.
- Used Docker to containerize Java applications, facilitating seamless testing and deployment across different environments.
- Worked with Oracle PL/SQL for performance tuning, optimizing stored procedures, and reducing query execution times.
- Contributed to designing and implementing a multi-tenant architecture for Java-based applications, enabling better resource allocation and cost-efficiency for clients.
- Collaborated in Agile environments, actively participating in sprint planning, retrospectives, and daily stand-ups to deliver features on time.
- Developed backend services integrated with message brokers like Apache Kafka, ensuring reliable asynchronous communication between microservices.
- Implemented CI/CD automation using GitLab CI, ensuring seamless code deployment with zero downtime and reducing manual intervention.

Environment: Java 8/11, Spring Boot, Spring Security, RESTful APIs, Prometheus, Grafana, EHC cache, Redis, JUnit, Mockito, Kubernetes, Helm, Docker, GitLab CI, Oracle PL/SQL, PostgreSQL, Apache Kafka, RabbitMQ, Maven, Radle, Git, GitLab, JIRA, Confluence, Microservices Architecture, Linux/Unix, CI/CD Pipelines, Apache Tomcat, Nginx

Accenture Private Limited, Hyderabad, India
Software Developer

Nov 2019 - Sep 2021

Roles & Responsibilities

- Developed RESTful APIs with Spring Boot to enable smooth communication between microservices, facilitating the integration of different systems.
- Optimized Java-based applications for better memory management and CPU utilization, enhancing performance and reducing infrastructure costs.
- Migrated databases from on-premises to AWS RDS using JDBC connections, ensuring seamless data migration with minimal downtime.
- Implemented OAuth 2.0 for secure API authentication and authorization in Java applications, improving data security and compliance with industry standards.
- Configured AWS services like S3, Lambda, and CloudWatch to monitor and automate backend systems, enhancing system observability and response times.
- Used Docker to containerize Java applications, simplifying deployment and ensuring consistency across development, staging, and production environments.
- Developed custom exception handling in Java applications to improve error reporting and debugging processes.
- Built CI/CD pipelines using Jenkins, Maven, and JUnit to automate builds, testing, and deployments, speeding up delivery times and reducing human error.
- Leveraged Spring Data JPA for database interactions, reducing the amount of boilerplate code and improving database query performance.
- Worked with NoSQL databases like DynamoDB to store and retrieve data for high-performance, distributed applications.
- Implemented caching using Redis to improve application response times and reduce load on backend services.
- Collaborated with front-end teams to integrate APIs with React.js and Angular applications, ensuring seamless communication between the front-end and back-end.
- Performed load testing using tools like JMeter, identifying bottlenecks in Java applications and optimizing performance for high-traffic scenarios.
- Integrated message queues like Amazon SQS to decouple and scale microservices, improving fault tolerance and reliability.
- Mentored junior developers in Java and Spring Boot best practices, conducting knowledge-sharing sessions and improving overall team productivity.
- Collaborated with DevOps teams to optimize Java application deployment pipelines, ensuring smooth and reliable releases.

Environment: Java 8/11, Spring Boot, Spring Data JPA, Spring Security, RESTful APIs, OAuth 2.0, AWS RDS, S3, Lambda, CloudWatch, DynamoDB, SQS, Docker, Kubernetes, Jenkins, Maven, JUnit, Redis, EHC cache, React.js, Angular, JMeter, Apache Kafka, Git, GitLab, JIRA, Confluence, NoSQL, SQL, PL/SQL, Microservices Architecture, Linux/Unix, CI/CD Pipelines, Agile Methodology

Global Technologies, Hyderabad, India
Junior Developer

Jun 2018 - Nov 2019

Roles & Responsibilities

- Assisted in developing Java-based web applications, focusing on enhancing user interface functionality using Java Swing, which improved user interaction and satisfaction.
- Implemented RESTful APIs using Java, facilitating data exchange between front-end and back-end systems, which streamlined communication and reduced data retrieval time.
- Debugged Java code under the guidance of senior developers, improving application stability and performance, which led to a more reliable user experience.
- Collaborated in version control using Git for Java projects, ensuring seamless team collaboration and code integration, which minimized conflicts and enhanced project efficiency.
- Developed CRUD operations in Java to manage database interactions, enhancing the efficiency of data handling and improving data retrieval speed.
- Conducted code reviews using VS Code, providing feedback on Java code quality and ensuring adherence to best practices.
- Participated in sprint planning and daily stand-ups, contributing to the timely delivery of Java-based features and improvements.

Environment: Java 8/11, Java Swing, RESTful APIs, Git, GitHub, VS Code, Eclipse IDE, MySQL, PostgreSQL, JDBC, Linux/Unix, CRUD operations, Maven/Gradle, Agile Methodology, Junit, CI/CD Pipelines (Jenkins), JIRA.

EDUCATION

- Central Michigan University - Jan 2023 - May 2024 - Master's in computer science - Mount Pleasant, MI
- Avanthi's Scientific Technological Research Academy - Jun 2015 - May 2019 - Bachelor's in computer science - Telangana, TS
