vimaluser@gmail.com | +1 832 475 4108

Lead SQL Server DBA | AWS Cloud | Multi-Database Exposure

PROFESSIONAL SUMMARY

- Over 16 years of experience in **MS SQL Server** Database administration, analyzing, implementing client business needs, and providing efficient solutions for Production, INT, QA, UAT, and development infrastructure for client applications.
- Proficiency in High availability solutions like **DAG, Always On, Replication, Clustering, Mirroring, Log Shipping** and Backup/Recovery.
- Strong Experience in AWS Cloud services **EC2, RDS, EBS, S3, Cloud watch, Splunk** etc.
- Led multiple SQL Server data center migration and upgrade initiatives, including premises to AWS cloud migrations, EC2 instance upgrades, and schema conversions using AWS Schema Conversion Tool.
- Experience in **MongoDB, Postgres** database administration, **Jenkins, Power shell** scripting for around 7 years, know snowflake framework and services.
- Strong knowledge in **SQL Server architecture, Performance tuning**, and providing solutions for high IO/CPU/memory consuming regressive TSQL.
- Extensive hands-on experience with **AI tools such as Claude Opus 4.6**, utilizing VS Code integrated with GitHub for Mark Down (MD) files, while managing team communication, code optimization, task tracking, and project execution.
- Experienced in Archival process like **Table partition** sliding window technique and purging huge historical table and improving database/application performance-based clients data retention.
- Domain knowledge in Mortgage, BFS, Insurance, Retail, Health care benefits, FMCG and ERP and worked in Transition Projects. Strong experience in ITIL modules.
- Proficiency in analyzing database performance in **App Dynamics, Spotlight, Splunk, DPA, fog light** database monitoring, and alarming tools.
- Led multiple disaster recovery (DR) initiatives for production applications and developed comprehensive DBA roadmaps and end-to-end standard operating procedures (SOPs).
- Worked on multiple Performance tuning and troubleshooting performance issues in SQL servers and SQL automation using T-SQL and PowerShell.

- Strong problem-solving skills, Team player, Implemented and performed proactive system monitoring to ensure high availability and good performance.

TECHNICAL SKILLS

Technology: SQL server 2008/2012/2016/2019/2022, MongoDB 4.2, Postgres, Splunk, Jenkins.

Cloud Technologies: AWS EC2, S3, RDS, EBS, cloud watch, Snowflake etc.

Database Tools: SSMS, Studio 3T, pgAdmin, Git Bash, DEA, App Dynamics, Splunk, Fog light, Spotlight, Profiler, SSRS, Solar winds DPA.

High availability: DAG Always on, Clustering, Mirroring, log shipping and Replication.

Operating System: Windows Server 2022/2019/2016/2012/2008.

Other Tools: ServiceNow, Jira, Slack, On Target and HP BMC service manager, AI MCP Claude, VS code, GITHUB.

PROFESSIONAL EXPERIENCE

ICE Mortgage Technology – Pleasanton, CA & Currently Remote in Texas.

Lead Database Administrator.

Responsibilities:

- Day-to-day administration of SQL Server 2012/2016/2019/2022, Postgres and MongoDB (backup/restore, monitoring, user management, etc.).
- Handling multiple projects like DC40 upgrade (data center migration), AWS SQL cost Optimization, SQL server upgrades.
- Supporting on call for the production server and handling incidents and changes for prod environments and handling offshore team.
- Automated Prod SQL database refresh for dev/QA
- I possess extensive knowledge of Encompass (Loan origination Application) and collaborating closely with the dev and QA team during release.
- Help improve performance of queries by analyzing the execution plans, setting up the Query store, monitoring resource utilization, and checking database indexes/statistics.
- Extensive hands-on experience with AI tools such as Claude Opus 4.6, utilizing VS Code integrated with GitHub for Markdown documentation, while managing team communication, code optimization, task tracking, and project execution
- Managing AWS EC2, RDS instance, recommending EBS volume types (GP2, Provisioned IOPS) based on SQL database workload and handling IAM.
- Handling S3 storage class, Versioning, life cycle management for SQL backup.
- Interfaced with Engineering and QA teams to help manage our non-production and production environments.
- Working with Microsoft premier field engineers to troubleshoot performance issues, CPU and Memory Bottlenecks.
- Monitoring critical database health checks in App dynamics and Splunk tools.
- Collaborate with a strong team to manage and support the company's on-demand production applications.

- Automated SQL database refresh activity using T-SQL and PowerShell for QA team.
- Participated in on-call team rotation to assist in providing 24*7 support.
- Facilitating root cause analysis on database issues and managing security of application access to databases.
- Designing and implementing database backup policies and procedures. Created and maintain scripts for monitoring, administration, automation, etc.
- Ownership of the SQL code deploy process for patches and releases.
- Capacity planning (disk space, I/O, CPU, memory, etc.) to ensure that we are properly positioned for growth across all environments.

ADT - Boca Raton, FL. (Oct 2018 to Aug 2019)

Employer: KForce Inc

Sr. Database Administrator.

Responsibilities:

- Administration and maintenance of SQL server in Production and QA environment on SQL 2016, 2014, 2012, 2008R2 versions;
- Performed Data center SQL server migration and upgradation (SQL 2008R2 to SQL 2016).
- Setting up and troubleshooting Always On replication and Log shipping between SQL servers.
- Configured Memory Optimized Table Data file and Worked with In Memory OLTP Tables.
- Automated Table partition for huge history table and splitting the data into multiple filegroups (Monthly) to easy access and archive the oldest data using the slide window technique.
- Performing backup and recovery on Database Management Systems (DBMS);
- Create SSRS reports for weekly business dashboard management and database performance and inventory reports in SSRS.
- Troubleshooting database performance issues & tuning SQL queries.
- Analyzing and identifying technical areas of improvement within existing applications.
- Optimizing database access and allocating/reallocating database resources for optimum configuration, database performance, and cost;
- Being a technical resource for direct communications to team members in the project development, testing and implementation processes;
- Creating technical specifications to meet the requirements of the design; and analyzing and identifying technical areas of improvement within existing applications.
- Researching and recommending new tools and technology frameworks that can drive innovation and differentiation of software
- Configuring and handling Spotlight and Ignite database monitoring tool and setting up alerts for SQL Database health and issues.

Wells Fargo- Charlotte. NC (Nov 2016 to Sep 2018)

Employer: Populus Group, LLC.

Database Administrator

Responsibilities:

- Supporting Enterprise Database Management (EDM) project which has around 150 SQL instances, hosted many SQL database applications, also worked in compliance Action center and handling incidents and Work orders.

- Implementing SQL Always On setup for critical production databases and enabling Read-only routing URL and Listing for reporting purpose in secondary replica.
- Worked in Transparent Data Encryption (TDE) Databases, creating, managing Master key, certificates and restoration.
- Worked on Database refreshing and user security management.
- Configuring SQL server monitoring and net cool alerts in Fog light and spotlight tools for wholesale server and DAN server and reports.
- Managing SQL security compliance failure for Our SQL server group and acting to remediate the failure.
- Upgraded to Fog Light 5.7.5.3 and spotlight version from 11.7.0 to 12.0.1 and handling vendor tickets.
- Setting up and troubleshooting Cluster SQL server and Log shipping.
- Managing SQL servers with power shell modules like sqlps, dba tools, SQL servers, etc.
- Managing and archiving Fog light & spotlight SQL repository database and servers.
- Analysis of database growth and recommendations for additional capacity (hardware, memory, etc.)
- Checking SQL server health check, Run SQL jobs and scripting SQL tasks in power shell module.
- Troubleshooting space issues like transaction log full, data file full, clearing the drive space.
- Creation of Jobs Schedules, Alerts using SQL Server Agent and Notifications.

Stewart Title - Houston, TX. (Mar 2015- Oct 2016)

Employer: Cognizant Technology Solutions.

Technical Lead

Project Highlights:

High Availability solution: Configured SQL 2014 always-on availability solution for critical application Resware and reporting option on secondary replica server.

Risk and Health Assessment program: Worked with Microsoft expert and ran RAP tool in super critical production SQL server to proactively identify the critical, medium, low categories problem and issue and took corrective action to increase the database performance.

SQL Server License Consolidation: Migrated all physical SQL server core-based licensed servers to ESX SQL farm Core based software assures license model to reduce the cost consequence.

Consistency and Integrity Check: Performed Database consistency test for critical application AIM+, Sure Close Lawson, Oracle EPM in SQL server.

SQL Migration: Migrated most of the non-production physical SQL server to consolidated VM server to reduce Microsoft licensing.

Responsibilities:

- Installed SQL 2014\2012\2008 and applied service packs.
- Scheduling/monitoring/troubleshooting SQL database backup jobs and backup disk space management.
- Enabling Transparent Data Encryption (TDE) and supporting TDE Database refresh.
- Database refreshments to Dev, UAT, QA environment from production for application team.
- Implemented production database to Always on and configured reporting features on the secondary replica server.
- Resolved deadlocks and blocking issues using Performance Monitor, Quest PA, Spotlight third party tool, SQL Server Profiler, DMVs, System tables and Stored Procedures for performance tuning and Used DBCC commands for consistency checks to improve performance.
- With T-SQL, we develop a security scheme for the database environment and application module.

- Importing Tables, Store Procedures, Functions, and Triggers from one environment to other environments.
- Created and scheduled SQL jobs to run SSIS packages into the data warehouse daily.
- Experience in providing Logging, Error handling by using Event Handler, and Custom Logging for SSIS Packages
- Upgrading databases for SQL servers, applying patches, etc.
- Worked on Optimization and Tuning of Stored Procedures and T-SQL queries.
- Created maintenance plans for performing Optimizations, Backups, Rebuilt and Reorganize indexes.
- Worked with SQL Server Profiler to generate traces on application team demands.
- Handling server level and database level permissions for users.

Project: Global Shared Services. (July 2011 to Mar 2015)

Clients: CSM, NBIM, Fidelity, Orkla Foods, Aetna, Ports American, Christies

Employer: Cognizant Technology Solutions. - India

Senior Systems Executive

Project Highlights:

SQL Server Upgradation: In CSM environment, we have upgraded critical production application databases from SQL 2008 R2 to SQL 2012 version SQL failover clustering after successful.

DR Test: Performed DR test by failing over secondary log shipping server to production by doing database health check and application connectivity.

Knowledge Transition: Onboarded new client Orkla Foods (200+ SQL instances), took KT from client in Norway for 3 months and gave reverse KT to internal cognizant team and onboarded the Orkla environment in offshore model with ITIL process and conveyed to steady state support.

Responsibilities

- Configuring new maintenance plan for DB backups, DB integrity and index maintenance etc.
- Setting up and Troubleshooting Replication, always availability and Log shipping between two or more servers with different configurations.
- Implemented SQL Always On setup for critical production databases and in secondary replica enable reporting purpose for insurance client databases.
- Worked on SQL server migration 2005, 2008 to higher version and Physical to VM level migration.
- Installation and administration of SQL Server 2005/2008/2012/2014 on Windows 2003/2008/2012 Platform.
- Databases refresh activity in UAT/DEV/Test environments.
- Analysis of database growth and recommendations for additional capacity (hardware, memory, etc.)
- Automation of silent SQL installation, Supporting TDE Databases, using PowerShell automated SQL report and exported in csv files.
- supported applications like internal employee benefits module databases.
- Permanent fixes for repetitive problem issues.
- Troubleshooting space issues like transaction log full, data file full, and clearing the drive space.
- Creation of Jobs Schedules, Alerts using SQL Server Agent and Notifications.
- Worked on all high availability: Clustering, replication, and Log shipping.
- Analyses the TSQL queries for the developer and writing queries for better performance.

Ramco Systems – India (May 2010- July 2011)

Analyst Programmer.

Responsibilities:

- Installation, Administration of SQL server 2005/2008 over windows 2003/2008 Platform.
- Adhoc and hot fix movement from the development team.
- Synching ERP SQL production database server in Singapore and US Site DB server.
- Responsible for creating & maintaining Database files for the db.'s.
- Worked on SSIS package deployment and creating SSRS report for SQL team support.
- DB refresh in non-prod environments. Work as a part of the team and provide 24x7 support to the servers.
- Monitoring Database performance and optimizing performance
- Configured SQL Agent for scheduling backups, managing jobs and creating alerts.
- Performing database consistency checks using DBCC Utilities and handling data corruption in user databases.
- Setting up and Troubleshooting Log shipping between two or more servers with different configurations.
- Setting up and Troubleshooting in Mirroring and SQL Server Failover clustering
- Generated daily report on the job failures, backup failures, disk space and involved in performance issues and resolving deadlocks.

Leiten Technology

Project: HRM, SMART, MRP (Feb 2009 – April 2010)

Junior Programmer.

Responsibilities:Involved in Installing, Monitoring and Troubleshooting Backup and DBCC jobs on the servers, Database Migration & Refreshing the Database.

- Worked with Tables, stored procedures and trigger
- Troubleshoot system issues, monitor scheduled jobs, and set up maintenance plans for proactively monitoring the performance of all SQL Server databases including monitoring failed and long running MS SQL Server jobs.
- Installing and Configuring SQL Server instances
- Scheduling SQL agent jobs like rebuild index, update statistics, and backup db.
- Creating and Managing indexes
- Configuring Database options and maintaining database integrity

Resolving blocking and deadlock issues. Grant privileges to the user, role, and object. Support column level privileges. Administrate security for server logins (Windows and SQL Accounts).

Education Details:

Degree: **Bachelor of Engineering** (2004- 2008)

Major: Computer science

Name of University: Anna University -India

Certifications: Microsoft Certificate of excellence: Microsoft® SQL Server™ 2008 - Implementation and Maintenance.
