Virginia, USA

PROFESSIONAL SUMMARY

Results-driven Full-Stack Software Engineer with 19+ years of experience delivering enterprise-grade web solutions across modern open-source, AWS, and Microsoft technology stacks. Proven track record leading complex architectural migrations, scaling platforms to serve 250K+ customers, and driving cross-functional Agile teams across globally distributed environments. Consistently recognized for zero-defect production deliverables, \$800K+ cost-saving releases, and award-winning contributions to large-scale platform modernization. Deep domain expertise spanning Commercial Real Estate, Banking, Financial Services, Retail, and Manufacturing.

WORK EXPERIENCE

Senior Software Engineer | CoStar Group

Virginia, USA · Jan 2017 – Feb 2026

CoStar Suite — Flagship CRM & Property Intelligence Platform

CoStar Suite is CoStar Group's flagship enterprise product serving 250,000+ commercial real estate professionals across the globe, generating hundreds of millions in annual revenue. The platform delivers authoritative property data across the US, UK, Canada, France, Spain, and Germany — encompassing building details, lease and sale listings, loan information, photo/video galleries, property contacts, sale and lease comparable, and in-depth analytics.

- Core contributor to CoStar Suite delivering multiple feature-rich web applications with complex workflows at global scale
- Led successful planning and migration of CoStar products from a monolithic ASP.NET architecture to a modern distributed SPA — Node.js, React, Tailwind CSS, C#, SQL Server, AWS Lambda, DynamoDB, REST, GraphQL, BFF microservices, and Micro Frontends — now handling millions of user requests in milliseconds with full i18n support
- Engineered Geospatial property data synchronization with Google Maps UI, rendering accurate real-time property placards across global map views
- Owned and optimized multi-level property search experience, ensuring reliable, performant search across millions of global CRE records
- Implemented prefetch and caching mechanisms on the Property Detail page, significantly reducing data load times and improving perceived performance at scale
- Developed and maintained key Property Detail tabs — Multifamily Unit Mix, Lease, and Loan — delivering accurate, real-time data for CRE professionals
- Built multiple reusable React/ARIA UI component library with Tailwind CSS, ensuring consistent and elegant UX across the platform
- Authored comprehensive unit test suites and Cypress end-to-end integration tests, significantly reducing production defect rates
- Maintained legacy C# .NET, Knockout.js, and SQL Server applications alongside modern stack development
- Collaborated with Product Owners and Business Analysts as an Agile practitioner to define Acceptance Criteria and ensure consistent sprint deliverables
- Onboarded and mentored new team members, accelerating ramp-up time and reinforcing engineering best practices
- Served as point of escalation for critical production issues, ensuring swift diagnosis and resolution to minimize customer impact

Listing Manager — Commercial Real Estate Portfolio Management SPA

Listing Manager is CoStar's modernized enterprise web application empowering CRE agents and brokers across the US, UK, and Canada to manage portfolios and listings across CoStar Suite and LoopNet.com — featuring Grid, List, and Carousel views, multi-level filtering, type-ahead address search, and Google Maps proximity discovery. Built as an isomorphic React-Redux SPA served over Express.js with a BFF microservices architecture.

- Architected and delivered Listing Manager as a responsive SPA (React-Redux / Express.js / BFF microservices) across desktop and mobile platforms
- Engineered a reusable JavaScript Security Module establishing a consistent and maintainable security layer across the application
- Implemented OpenID Connect protocols to enable seamless Single Sign-On (SSO) across CoStar applications using Node.js
- Designed and built BFF microservices to optimize client-server communication and decouple front-end consumption from backend enterprise services
- Implemented off-market listing functionality using React-Redux components, extending platform capability for a key business use case
- Developed a library of reusable React components with plug-and-play capability across multiple web forms, accelerating feature delivery
- Authored comprehensive unit test cases using the Mocha JavaScript framework

Technical Lead | Capital One

Virginia, USA · Sep 2010 – Jan 2017

IRIS Platform — Enterprise CRM for 15,000+ Call Center Agents & Bankers

IRIS is Capital One's flagship CRM application powering over 15,000 call center agents and bankers in serving millions of customers daily. The platform encompasses 200+ independent web modules spanning customer search and identity verification through to lost and stolen card reporting. IRIS Bank delivers a 360° view of customer portfolios — Account View, Relationship View, Restrictions, Account Alerts, Stop Payments, Transaction History, International Wire Transfers, and more — built on a proprietary IRIS Framework leveraging advanced Microsoft .NET technology.

- Designed, coded, and delivered 40+ web modules including 360° Customer Portfolio View, Bank Wire Operations, Promise to Pay, and Pay by Phone — supporting mission-critical banking and call center operations
- Engineered high-performance agent Landing Pages using JavaScript and lazy loading, significantly improving page load times for 15,000+ daily users
- Implemented high-performance Customer Portfolio Module and middleware components using .NET Task Parallel Library (TPL), optimizing concurrent data processing at scale
- Developed reusable ASP.NET User Controls with plug-and-play capability across multiple web pages, accelerating feature development and ensuring UI consistency
- Authored Automated Test Cases using Rhino Mocks and MS Test, and built a comprehensive Regression Suite using SpecFlow and Selenium
- Led Agile sprint planning, task assignment, offshore team coordination, code review, and ATC automated test coverage
- Collaborated with Product Owners to translate complex business requirements into precise, well-scoped technical deliverables
- Proactively analyzed downstream dependencies and coordinated with cross-functional teams to eliminate blockers and ensure on-time delivery
- Mentored developers on Software Design Patterns, Best Practices, and Engineering Principles, elevating overall team code quality
- Achieved zero-defect production releases consistently, maintaining high team productivity and meeting all product deadlines

Key Achievements

- **Awarded Twice — Best Contribution in Platform Migration:** Recognized for consistent excellence in large-scale modernization efforts across the Banking Platform
- **\$800K Savings in Under One Month:** Delivered a critical Web Module release under a tight deadline, directly generating \$800K in savings within the first month of go-live

Rapid Cycle Development (RCD) — Credit Card & Banking Platform

RCD is an integrated enterprise platform consolidating three core ASP.NET web applications — Track One, Deuce, and Cop Tracker — supporting Capital One's Credit Card Finance operations. Track One and Deuce are underwriting tools for Credit Limit Decrease adjudication; Cop Tracker manages fraudulent customer case lifecycle.

- Architected and deployed a reusable Security Framework using ASP.NET HTTP Handlers, enforcing consistent authentication and authorization across all three applications
- Engineered SSIS packages to tokenize Credit Card numbers via ION Web Services, reducing sensitive data exposure across the platform
- Successfully implemented PCI DSS — Project Shield across the entire RCD platform, ensuring full compliance with payment card industry security standards
- Remediated all Linux shell scripts handling Credit Card numbers to use Account IDs, eliminating PII exposure at the scripting layer
- Coordinated redesign of SQL Server and Oracle databases to fully purge Credit Card numbers across millions of transactions
- Introduced and enforced a structured TFS branching strategy and mentored the team on source control best practices

System Analyst | Ballistic Blue

UK (Offshore: India) · Oct 2008 – Aug 2010

ballisticblue.com — Online Personalized Gifts & Cards Platform

An e-commerce platform specializing in personalized gifts and cards — printable invitations, e-cards, jigsaw puzzles, and customized teddies — with an interactive design dashboard, secure SagePay 3D payment integration, order tracking, and a full Admin application for design, pricing, order management, and print fulfillment.

- Engineered a complex, interactive Design Dashboard using jQuery, enabling real-time text editing and image scaling for product personalization
- Designed and delivered a Print Preview with Mail Merge feature, allowing customers to preview personalized designs with dynamic contact data before purchase
- Built a fully functional User Photo Library Management system enabling customers to upload, organize, and reuse personal images across product customizations
- Developed an XML service layer over Adobe Graphics Services for high-fidelity image scaling and product customization rendering, ensuring print-quality output

Software Engineer | LMW / Super Sales India / Earlier Roles

India · 2006 – 2008

Notable Projects

- Patent Alert System (PAS) & Calibration Alert System — LMW: Built a dynamic Web Form Builder, automated Mail Alert Engine (Windows Services), and scalable database models to manage patent lifecycles for million-dollar machinery assets. Platform was extended as the Calibration Alert System for a separate manufacturing production line.
- XeDec — Job Scheduling & Production Planning: Implemented proprietary Backward and Forward Scheduling Algorithms, interactive Gantt Chart visualization, and high-performance SQL Server data models to achieve 100% resource utilization in Discrete Manufacturing environments.
- IPS — Integrated Order Processing System (Super Sales India): Replaced a legacy Excel-based workflow with a full Windows/Web application managing the complete order lifecycle from entry to dispatch, achieving a 70% improvement in customer satisfaction.

- EZ-Publish — Developer Productivity Tool: Built an internal Windows command-line utility that automated web application deployment to IIS virtual directories in two keystrokes, saving each developer 15–20 minutes per day.

TECHNICAL SKILLS

Languages	JavaScript, TypeScript, C#, ASP.NET, SQL
Frontend	React, Redux, Micro Frontends, Tailwind CSS, LESS, Bootstrap, CSS3, Webpack, Babel, Storybook
Backend	Node.js, Express.js, GraphQL, REST APIs, BFF Microservices, Ts.ED, Isomorphic Rendering, WCF, Web API
Cloud & AWS	AWS Lambda, API Gateway, DynamoDB, RDS, S3, Docker, Docker Compose
Databases	SQL Server, PostgreSQL, DynamoDB, MongoDB
Auth & Security	OpenID Connect, SSO, Passport.js
Testing	Cypress, Grafana K6, Mocha, MS Test, Rhino Mocks, SpecFlow, Selenium, Sauce Labs, TDD, BDD
Tools & Ops	Git, TFS, Datadog, LogRocket, Kibana, Snowflake, Confluence, Jira, VersionOne, HP ALM, SOAP UI, Fiddler, Postman

EDUCATION & CERTIFICATIONS

Master of Computer Applications Bharathiar University, India	2003 – 2006
Bachelor of Science, Computer Science Bharathiar University, India	2000 – 2003
Certified Scrum Master · Scrum Alliance	
Microsoft Certified Professional (MCP) · Microsoft
