

Name: Varsha Reddy
Email: varshabonthala1@gmail.com
Ph: 9407583291
LinkedIn URL: linkedin.com/in/varshabonthala1

PROFESSIONAL SUMMARY:

- **8+ years** of professional IT experience in designing and developing multi-Tier distributed Enterprise applications using Cloud Technologies like **AWS, Azure and GCP**
- Strong with Object Oriented Programming features of **Java**, and **J2EE** technologies with Software Development Life Cycle (**SDLC**)
- Strong application development experience in using **Agile** Software Development methodologies like **Scrum** and Traditional software models like **Waterfall** and **TDD**.
- Expertise in developing web pages using **HTML5, CSS3, JavaScript, jQuery, Ajax, Angular, Bootstrap** with web page cross browser compatibility and responsive web design and Server scripting language like **Node JS, BackboneJS** and **ReactJS**.
- Strong at troubleshooting and resolving **CI/CD** pipeline issues efficiently, minimizing downtime
- Conducted thorough testing of **RESTful** APIs using **Postman**, ensuring functionality and reliability through automated and manual test cases
- Conducted load testing using tools like **JMeter** and **Gatling** to assess **API** performance under high-stress conditions, followed by implementing necessary improvements
- Developed the application using **Java11** and implemented its features like **Lambdas Expressions, Time API, Streams, functional** interfaces, **collectors**, default methods, type interfaces, for each.
- Having experience with **Cloud** Computing Service environments like **Amazon Web Services (AWS)** and **managed EC2, S3 bucket, Virtual Private Cloud (VPC)** through **AWS** Console and API Integration.
- Experience in understanding and implementing **Microservices** in client-server business applications. Expert in building **Microservice** applications using **Spring Boot** for developing **RESTful** web services.
- Proficient in using **GraphQL** client libraries like **Apollo Client, Relay**, or **URQL** for managing local state and data fetching in front-end applications
- Experienced on payment gateway integrations, facilitating seamless communication between various financial institutions and merchant platforms
- Expertise in designing, developing, and implementing Extract, Transform, Load (**ETL**) processes using **Informatica PowerCenter**, enabling seamless data integration and data warehousing.
- Developing inter-operable Web Services and their related technologies like **SOAP, Restful, WSDL, UDDI, XML, JAX-WS, JAXB, JAX-RPC** using tools like **Apache Axis**.
- Experience using **Kotlin** for backend development with frameworks like **Ktor** or **Spring Boot** for building **RESTful** APIs and **microservices**
- Proficient in designing and optimizing **DynamoDB** schemas for performance and scalability
- Knowledgeable in implementing versioning and deprecation strategies in GraphQL APIs
- Extensive hands-on experience with **JUnit** and **Mockito** frameworks for writing and executing unit tests and creating mock objects, facilitating comprehensive test coverage
- Strong skills in RDBMS implementation and development using **SQL Server, Oracle, IBMDB2, MYSQL**, and experience in working with **SQL, PL/SQL** programming languages.
- Expertise in **NoSQL** databases like **MongoDB, DynamoDB**, and **Cassandra** databases.
- Experience in using build tools like **Gradle, ANT, MAVEN** for the development of build artifacts on the source code and **log4J** framework for **logging** details.

EDUCATION:

- Bachelor of technology in Computer Science and Engineering from JNTUH, May 2015

- Masters in Business Analytics from University of North Texas, Dec 2021

TECHNICAL SKILLS:

Programming	Java/J2EE, C, C++, PL/SQL, .Net.
Scripting	jQuery, JavaScript, Shell Script, Python
Frameworks	Servlets, EJB, JSP, JSF, JDBC, SOAP, WSDL, REST, XML, JAXP, JAXB, JPA, JMS, Spring 3.x/4.x/5.x, Hibernate, Spring MVC, Spring Boot, Spring Data, Spring Batch, Spring cloud, Dump Analysis, Apache Flink
IDE	Eclipse, IntelliJ, NetBeans, IBM Rational Application Developer (RAD)
Web Technologies	HTML5, CSS3, AJAX, JSON, Bootstrap, Angular2.0/4.0, React JS with Flux, Redux, Ember JS, Knockout JS, Backbone JS, Handlebar JS, NodeJS, Express JS, TypeScript.
Web Servers	J Boss, Web logic, Web Sphere, Tomcat, Jetty, JAX-RS, JAX-WS, Apache CXF, Axis, Jersey.
Databases	Oracle 8i/9i/10g/11i/12c/18c, MySQL, MSSQL Server, Sybase, PostgreSQL, Cassandra, MongoDB
Cloud Technologies & DevOps Tools	AWS, PCF, EC2, EBS, S3, Docker, ECS, EBS, EKS, SQS, RDS, S3, Glacier, Lambda, Kubernetes.
Database Tools	SQL Developer, DB Artisan, TOAD, MSSQL Server Management Studio
Reporting Tools	Jasper Reports, BIRT, Crystal Reports
Build Tools	Ant, Maven, Gradle, Jenkins, Bamboo Gulp, Grunt, Web pack, NPM, Bower
Other Tools	JIRA, Confluence, Bam, Puppet, Chef, boo, Sonar, Fisheye
Testing Tools	Junit, TestNG, Mockito, Jasmine, Karma, Mocha, Chai, Spock, Protractor
Version Control	Git, SVN, CVS, VSS (Visual Source Safe)
Other Technologies	AppDynamics, Splunk, ELK Stack etc.

PROFESSIONAL EXPERIENCE:

Client: Deloitte, Austin, TX

Jan 2022 - Present

Role: Full Stack Java Developer

Responsibilities:

- Implementing core features of the **Angular** framework such as **Dependency Injection**, **Data Binding**, **Filters**, **Directives**, **Templates**, **Services**, and **Deep Linking Designing**.
- Used **Angular Router** to build **single-page applications** for navigation through different statuses and multiple models.
- Migrated monolithic applications to **Microservices** using **Node.js**, resulting in improved maintainability and scalability
- Implementing core features of the **Angular** framework such as **Dependency Injection**, **Data Binding**, **Filters**, **Directives**, **Templates**, **Services**, and **Deep Linking Designing**.
- Used **Angular Router** to build **single-page applications** for navigation through different statuses and multiple models.
- Orchestrated microservices deployment using **Docker** and **Kubernetes**, enabling scalable and resilient application architecture
- Implemented **Azure Functions** for microservices architecture, enabling event-driven processing and seamless integration with other Azure services like **Azure Storage** and **Azure Cosmos DB**
- Configured autoscaling for **Azure** services to optimize resource usage during peak loads, enhancing application performance and cost efficiency
- Leveraged popular **Node.js** frameworks such as **NestJS** and **Koa** to streamline development processes and enhance application architecture
- Designed and implemented event-driven architectures using **Azure Event Hubs** and **Azure Service Bus**, enabling real-time data processing for Java applications
- Conducted performance profiling and optimization of **Angular** applications, resulting in a 20% decrease in load times through lazy loading and change detection strategies
- Deployed and managed **Microservices**-based applications on **Pivotal Cloud Foundry (PCF)**, ensuring scalable and efficient use of cloud resources
- Implemented automated API tests using **Postman's** scripting capabilities (JavaScript) to enhance testing efficiency and coverage
- Implemented **Spring Boot**, based services interacting through a combination of **REST** and **Apache Kafka** message brokers for communicating between different applications and **Microservices**.
- Utilizing **Kubernetes** for the **runtime** environment of the **CI/CD** system to build and test deploy.
- Developed end-to-end data processing pipelines that begin with receiving data using distributed messaging systems **Kafka** through the persistence of data into HBase.
- **Kubernetes** is being used to orchestrate the deployment, scaling, and management of **Docker** Containers.
- Managed **Azure SQL Database** and **Cosmos DB instances**, ensuring optimal performance and security for data-driven Java applications
- Configured SSL/TLS certificates and secured Tomcat connectors for HTTPS communication.
- Developed and maintained web applications using **React.js**, ensuring high performance and responsive design
- Created custom dashboards in **Azure Monitor** for tracking key performance indicators (KPIs) of Java applications, providing stakeholders with actionable insights
- Configured and managed **Azure Active Directory** for user authentication and role-based access control, enhancing security across cloud applications

- Automated **CI/CD** pipelines with **Jenkins**, **Ansible** for **Linux** hosts, and key processes with scripts reducing manual efforts
- Integrated **BlazeMeter** with CI/CD pipelines (e.g., Jenkins, GitLab) to automate performance testing, enhancing deployment efficiency
- Developed RESTful APIs using **Spring Boot** and deployed them on **Azure**, facilitating seamless communication between services and third-party applications
- Developed a logging module using **Log4J 2** to create log files to debug and trace applications.
- Proficient in setting up data replication across regions using **DynamoDB** Global Tables for high availability and disaster recovery
- Utilized **Azure Resource Manager** (ARM) templates and Terraform for automated resource provisioning and management
- Developed and managed **Azure Blob Storage** solutions for scalable data storage and retrieval, optimizing costs through lifecycle management policies
- Configured **AWS IAM** roles and **Security Groups** in **Public** and **Private Subnets** in **VPC**.
- Working on end-to-end development and migrating the application to Cloud using the **AWS** available services like **AWS EC2**, and **ElasticSearch**.
- Developed custom **React hooks** to handle specific business logic.
- Worked on **AWS**, **High Availability** Practices, and deploying backup/restore infrastructure.
- Integrated monitoring and logging solutions (e.g., **Prometheus**, ELK stack) for **Dockerized** applications, enabling real-time performance tracking and issue resolution
- Designed and configured **Azure Virtual Networks and Network Security Groups** (NSGs) to enforce traffic rules and secure network boundaries, ensuring robust security postures

Environment: Java 11, Angular, NodeJS, AWS, JavaScript, Hibernate, Bootstrap, JIRA, Spring Boot, Web services, Microservices, AWS, ELK stack, MongoDB, Maven, Tomcat, HTML5, CSS3, jQuery, Docker, Tomcat, Git, Jenkins, Selenium, Cucumber, Spring Cloud, S3.

Client: ADP, Roseland NJ

Aug 2019 - Dec 2021

Role: Sr Full Stack Java Developer

Responsibilities:

- Managed **Azure Site Recovery** solutions to ensure business continuity and disaster recovery for critical applications
- Implemented **AWS SDKs** for **DynamoDB** with various programming languages like Python, Java, and JavaScript
- Designed test cases and test plans and developed an embedded software data driven test automation framework in **Linux/Python**
- Created user-friendly **GUI** interface and Web pages using **HTML**, **Angular JS**, **jQuery**, **Ajax**, and JavaScript. Defined new validations through AngularJS for the form field validation implemented through **HTML5**.
- Conducted technical workshops and training sessions on advanced Java topics such as concurrency, multithreading, memory management, and garbage collection.
- Integrated **PCF** into CI/CD pipelines, streamlining the deployment process and ensuring rapid delivery of new features and updates
- Conducted performance tuning for **Docker** containers, optimizing resource allocation and improving application response times
- Organized and managed **Azure Resource Groups** for efficient resource allocation and governance, facilitating better access management and cost tracking

- Designed and maintained **RESTful** APIs for payment processing, ensuring seamless connectivity between merchants and financial institutions
- Refactored legacy code to modern **React** practices, improving code readability and maintainability
- Experienced in integrating **JMeter** tests into **CI** pipelines using tools like **Jenkins**, **GitLab CI**, or **Bamboo**, enabling automated performance testing as part of the software delivery process
- Implemented the project as a multi-tier application using **Spring IOC**, **Spring Data**, **Spring AOP**, **Spring Data JPA**, **Spring MVC** Architecture
- Knowledgeable in implementing versioning and deprecation strategies in **GraphQL** APIs
- Conducted performance tuning and optimization of Java applications deployed on **Azure**, achieving significant improvements in response times and resource utilization
- Worked on **AWS Data Migration Service (DMS)** to migrate data from other databases to **DynamoDB**
- Developed **RESTful** Web Services with **JAX-RS** using **Spring Boot** and **Micro Services** Architecture. Worked on testing the **RESTful** APIs using tools like **POSTMAN**.
- Used **Spring IOC** framework for Dependency Injection and **Spring AOP** for logging purposes. Implemented **Restful** Services with **JAX-RS** using **Spring Boot** and **Micro Service** Architecture.
- Implemented persistence layer using **Hibernate**, created **POJOs** and mapped to databases Annotations.
- Integrated **Docker** into **CI/CD** workflows for consistent and reproducible builds, reducing environment-related issues
- Used **Jenkins** pipelines to drive all **microservices** builds out to the **Docker** registry and then deployed to **Kubernetes**, Created Pods and managed using **Kubernetes**.
- Involved in development of test environment on **Docker** containers and configuring the Docker containers using **Kubernetes**.
- Evaluated new Java technologies and tools (e.g., Java 17, Quarkus, Micronaut) to improve the development process, ensuring alignment with industry standards.
- Served as the point of contact for Java-related inquiries, providing guidance on framework selection, coding standards, and architectural decisions
- Configured **Azure Load Balancers** for high availability and reliability of applications, improving user experience by ensuring consistent performance under load
- Built comprehensive **unit tests** and **integration tests** for React components using **Jest**, **React Testing Library**, and **Enzyme** to ensure code reliability and minimize bugs
- Developed **Microservice** on boarding tools leveraging **Python** and **Jenkins** allowing for easy creation and maintenance of build jobs and **Kubernetes** deploy and services.

Environment: Java 1.8, J2EE, Spring MVC, XML, AJAX, AngularJS, NodeJS, AWS, JavaScript, Hibernate, Bootstrap, JIRA, Spring Boot, Web services, Microservices, AWS, ELK stack, MongoDB, Maven, HTML5, CSS3, jQuery, Docker, Tomcat, Git, Jenkins, Selenium, Cucumber, STS, Tomcat Server

Client: Accenture, Hyderabad, India

Aug 2018 – Jul 2019

Role: Full Stack Java Developer

Responsibilities:

- Involved in various phases of Software Development Life Cycle (**SDLC**) of the application like Requirement gathering, Design, Analysis and Code development and understanding of business requirements and implement the process using Agile (**Scrum**) methodology.
- Worked on Prototype designs and development in **HTML5**, **CSS3**, **Bootstrap**, **Java Script** and **ReactJS**.
- Used **jQuery**, **Ajax** for service calls on pages to interact with the server for information.

- Developed the User Interface using **JSP**, Spring **MVC** frameworks, **jQuery**, **AngularJS**, **Backbone JS**, and **Node JS**. Used
- Built and maintained data pipelines utilizing **Kafka Connect** to integrate various data sources and sinks, enabling seamless data flow across systems
- **AJAX** and **sql** for Server side/Client-side validation.
- Worked on Proof of Concept for developing applications using **Node JS** and **Mongo DB**.
- Used **Spring** framework **AOP** features and **JDBC** module features to persist the data to the database for few applications. Also, used the **Spring IOC** feature to get hibernate session factory and resolve other bean dependencies.
- Involved in writing **Spring Configuration XML**, file that contains declarations and business classes are wired-up to the frontend managed beans using **Spring IOC** pattern.
- Created **RESTful** web services interface to Java-based runtime engine and accounts.
- Expert in integration of the various modules over Service Oriented Architecture (**SOA**) using **JMS**, **Restful Web services** and **Micro Services** using **Spring Boot**.
- Involved in integrating **JAX-RS** into **Spring Boot** application.
- Implemented the various services using **micro services architecture** in which the services work independently. Installed, secured, and configured **AWS (Amazon Web Services)** cloud servers with **Tomcat**, **MySQL**, **Apache**, and **Amazon AWS virtual servers (Linux)**.
- Worked with numerous tools and services from the AWS suite including **S3**, **SQS**, **AWS Lambda**, **EMR**, **Elastic search**, **Dynamo DB**.
- Developing scripts for build, deployment, maintenance, and related tasks using Jenkins, Docker. Experience on continuous Integration (CI) process and continuous deployment (CD) in Jenkins.
- Developed an **API** to write **XML** documents from a database. Utilized **XML** and **XSL** Transformation for dynamic web- content and database connectivity.
- Involved in designing and developing the **JSON**, **XML** Objects with **MySQL**, and **NoSQL** database like **MongoDB**.
- Implemented service methods and **SQL** queries, **PL/SQL** to interact with the Oracle **DBMS**. Called **Stored Produces** in **Oracle** using Callable Statements in **JDBC**.
- Developed **SCM** by using the **JSP/HTML** like one form for each functionality user interface, standard validations using the **JavaScript**, Servlets used as the controllers for the business logic and business logic using **JDBC**, **XML** parsing techniques etc. using **MVC**.
- Implemented client-side routing using **React** Router, creating a seamless single-page application experience

Environment: Agile Methodology, Java, J2EE, HTML5, CSS3, JavaScript, jQuery, AngularJS, JSP, JSTL, Spring (IOC, MVC, Security), Hibernate, DB2, XML, XSD, SOAP UI, Apache Camel, Web Services, Restful, SOAP, JAX RS, JAX-WS, WSDL, Log4j, JUnit, Web Logic, Jenkins, Gradle, GIT, Spring Tool Suite (STS), JIRA, Windows, Linux.

Client: Tata Consultancy Services, Hyderabad, India

Aug 2015 – Jul 2018

Role: Java Developer

Responsibilities:

- Involved in **SDLC** requirements gathering, analysis, design, development, and testing of application developed using Agile methodology.
- Created user-friendly **GUI** interface and Web pages using **HTML**, **Angular JS**, **jQuery**, **Ajax**, and Java script. Defined new validations through AngularJS for the form field validation implemented through **HTML5**.
- **JVM** tuning experience by changing to heap sizes according to the requirement.

- Used Spring **MVC** and Dependency Injection for handling presentation and business logic.
- To maintain loose coupling between layers published the business layer as services and injected the necessary dependent components using Spring **IOC** and published cross cutting concerns like **Logging**, User Interface exceptions, Transactions using **Spring AOP**.
- Developed or configured custom connectors, filters, or extensions to enhance the functionality of **Tomcat** for specific business use cases.
- Integrated Spring **DAO** for data access using **Hibernate**.
- Used **Spring Security** for Authentication and **Authorization** of the application.
- Implemented persistence framework using **Hibernate** & handled Transaction Management using the provided data source.
- Managed multiple **Tomcat** instances and environments (development, QA, staging, production) with automated processes
- Upgraded **CI/CD** pipeline automation with **Ansible**, **Maven**, and **Terraform**, accelerated build process and ensured consistent, version-controlled deployments
- Extensively used **JSON** to parse the data from server side to satisfy the business requirement. Responsible for designing **Hibernate** mapping files based on business logic and Object relationships.
- Integrated **Spring** and **Hibernate** together and worked on developing backend components and services using **Hibernate** and **spring**.
- Extensively used **HQL** and **SQL** for querying databases.
- Developed **Message Driven Bean** for **asynchronous** sending Messages using **JMS**.
- Used **Apache Axis Service Engine** for creating and deploying **Web Service** clients using **SOAP**, **WSDL**.
- Used **Web Services** for creating rate summary and used **WSDL** and **SOAP** messages for getting useful plans from different modules.
- Used **Spring JMS** module for lookup for the queues and **MDBs** for the listeners.
- Used **Log4J** for application logging and notification tracing mechanisms. Used Maven tools for building and deploying Web applications.
- Analysis and Bug fixing of the production problems and defects along with enhancement.
- Implemented **JUNIT** test cases for unit testing and Suites for end-to-end testing.
- Used **JIRA** for tracking the Project Stories in Agile Methodology.
- Used Tortoise **SVN** to maintain the version of the files and took the responsibility to do the code merges from branch to trunk and creating new branch when new feature implementation starts.

Environment: Java, J2EE, HTML, CSS, JavaScript, jQuery, JSP, JSTL, Spring, Hibernate, XML, XSD, Web Services, Restful, SOAP, WSDL, Log4j, Tomcat, JUnit, DB2, JBoss, Jenkins, Gradle, GIT, Eclipse, JIRA, Agile methodology, Linux.
