Technical Skills

Languages: C#, Javascript, Python, SQL

Frontend: HTML, CSS, Javascript, Typescript, Angular, React Js, npm, RxJs, Redux, Angular material, Storybook, XAML

Backend: C#, Python, .NET Core, ASP.NET, Microservices, REST APIs, JWT, ADO.NET, Dapper, Entity Framework, xUnit, NUnit, Moq, SQL Server, Postgres, Serilog, Async Programming, RabbitMQ, ActiveMQ, Unit testing, Node.js, MongoDB

Cloud : Azure App Services, Azure functions, Blob Storage, Azure Application Insights, Azure Storage, CosmosDB, Azure monitor, Azure Logic Apps, AKS, Azure key vault, Azure AD B2B B2C, Azure data factory, OAuth2.0, AWS Lambda, S3, Secrets manager, Cloud Front, SQS, SNS, Cloudwatch, Cloudwatch Dashboards, AWS Batch, Event Bridge, IAM, DynamoDB, QLDB, Terraform

Methodologies: SDLC, Agile Scrum, SAFe Agile Framework

Others : Docker, Kubernetes, GitLab, CI/CD pipelines, Visual Studio, VS Code, SQL Server Management Studio, pgAdmin, Postman, Swagger, Git, Bitbucket, Jira, familiar with Azure DevOps, SAML, AI

Work Experience

Virtusa

Overland Park, Kansas

Senior Software developer

Jul 2022 – Present

- Spearheaded integration efforts of payment systems and streamlined settlements and auditing processes, resulting in a noteworthy 60% reduction in overall settlement time.
- Leveraged .NET, CQRS, MediatR, gRPC, Gitlab and aws services such as AWS Lambda, S3, SQS, SNS, Eventbridge, AWS batch, and API Gateway to develop resilient and efficient microservices.
- Collaborated in the design and implementation of a comprehensive orchestration solution for Virtusa's flagship Digital Transformation Platform. Involved in modernizing the application to Micro-service event-driven architecture using .NET and Azure which improved resiliency and scalability by 20%.
- Designed, developed, and maintained client-side session management during the transition from a monolithic application to microservices, facilitating improved modularity and scalability.
- Demonstrated expertise in leveraging various Azure services including Azure Blob Storage, CosmosDB, Azure SQL, Table Storage, Azure Key Vault, and Azure App Services. Enhanced logging capabilities using Azure Application Insights for improved monitoring and troubleshooting.
- Collaborated on SaaS solutions for a digital transformation platform, following SDLC best practices and employing clean coding techniques.
- Focused on enhancing testing methodologies with xUnit and NUnit frameworks to improve overall code quality and system reliability.
- Designed and developed back-office web application using Angular.
- Implemented Agile Scrum methodology, collaborating closely with the Product Owner to deliver accepted functionality in each sprint.
- Worked with terraform for Infrastructure as code.

Country Financial

Champaign, Illinois

Software Engineer

Jan. 2022 – Jul 2022

- Improved the customer portal, empowering users with streamlined access to insurance, billing documents, and personalized preferences making the overall document processing time-by 45%. Leveraged .NET to develop bespoke auto insurance cards tailored for Country Financial.
- Collaborated on the design and validation of intuitive user interfaces using XAML and WPF, ensuring consistency across platforms.
- Orchestrated seamless transitions by collaborating with diverse stakeholders. Addressed technical hurdles and coordinated cross-functional teams for Azure App Services deployment, ensuring smooth project execution.
- Designed and implemented engaging user interfaces using HTML, CSS, JavaScript, and ReactJs including Redux. Ensured an intuitive and responsive user experience across platforms.
- Leveraged Azure services like App Service and Cosmos DB to deploy scalable applications and optimize database performance. Contributed to improved reliability and efficiency of systems.
- Implemented robust authentication mechanisms using Azure AD, OAuth 2.0, and SAML, ensuring secure access control and data integrity.
- Developed a robust data processing pipeline for insurance data leveraging Azure Data Factory, Azure SQL, and Python. Also integrated with Azure Blob Storage and Azure Data Lake, ensuring efficient data ingestion, transformation, and storage.

- Worked in Agile environment and actively applied SAFe Agile Framework in the work culture. Collaborated with the Product Owner to understand requirements and design logic for implementation.
- Collaborated closely with cross-functional teams to deliver growth-driven software solutions.

AARP - The Tech Nest

Champaign, Illinois

Full Stack Developer

May. 2021 – Jan 2022

- Developed a python API extension POC to generate stats and add dynamic analytical capabilities on JSON data in RDBMS.
- Worked on health care security and analytics following HIPPA, HL7, FHIR, CCDA standards
- Leveraged Node.js and React for interactive front-end development, improving market engagement and user experience.
- Designed, developed, and Integrated AWS API Gateway to create and manage RESTful APIs for backend services.
- Developed an image management system using micro-services in .NET and deployed in AWS fargate as docker image. Also, implemented serverless architecture using resources like S3, SNS, SQS, Lambda functions.
- Developed responsive and interactive user interfaces using React.js, HTML, and CSS.
- Created Typescript reusable components and services to consume REST APIs using Component.
- Implemented Multi-threading in an application using design patterns like Factory Method, Abstract Factory, Singleton, Builder, and Adapter which improved maintainability and extensibility.
- Developed Web API Services for B2B communications and developed a system with an API request and response logging system. Implemented client-side Interface using React.js.
- Developed and optimized T-SQL queries to retrieve sales data from a multi-table database, improving query performance by 40% through query optimization techniques.
- Built terraform scripts for Infrastructure as code and integrated them in Gitlab CI/CD pipeline

National Center for Supercomputing Applications -

Champaign, Illinois

Software Engineer

Aug. 2020 – May 2022

- Enhanced .NET Core microservices, optimizing core functionalities for project requirements.
- To capture, index and correlate real-time data in a searchable repository and to generate graphs, reports, alerts in Splunk. Also worked with SOC team to build and visualize network related data.
- Designed robust Web APIs, executing CRUD operations with Entity Framework for data access. Implemented Docker and Kubernetes for scalable, portable deployments.
- Implemented industry-leading AWS security measures to ensure robust data protection and compliance adherence. Additionally, orchestrated AWS environment configurations and streamlined deployment pipelines.
- Developed dynamic UIs with React.js, facilitating seamless backend communication.
- Managed relational & NoSQL databases, optimizing schemas. Implemented OAuth 2.0 and JWT for secure API access.
- Designed and developed publisher and consumer services for RabbitMQ for publishing and consuming messages.
- Established robust authentication and authorization mechanisms using OAuth 2.0 and JSON Web Tokens (JWT), ensuring secure API access and protecting sensitive data against unauthorized access.
- Led the data migration effort, utilizing T-SQL BULK INSERT and BCP commands to seamlessly transfer customer data from legacy systems to the new CRM platform.

Amazon - TCS

Chennai, India

Software Engineer

May. 2018 – Aug 2020

- Developed and maintained SQL Server databases and stored procedures.
- Built an application to display data analytics and beacon tracking user interface for the IoT system.
- Spearheaded the development of a product prototype for TCS Digital, leveraging Raspberry Pi iBeacons and Azure IoT.
- Led end-to-end development of a Chatbot utilizing Dialogflow. Integrated seamlessly with python backend Dialogflow API V2 and rich user interface with Angular framework.
- Created a Webhook using the Python Flask framework, incorporating JWT Authentication and Authorization. Also integrated it with Dialogflow framework for secure authentication.
- Designed, modified, and optimized Alteryx workflows to improve efficiency and performance.
- Collaborated with QA and product management teams, utilizing Azure DevOps for efficient tracking of release activities.
- Facilitated the migration of a legacy application to a new Angular-based UI and .NET Core backend to build .

Education

University of Illinois Urbana-Champaign

Champaign, United States

Masters in Computer Science; GPA:4.0

Aug. 2020 – May. 2022

Gandhi Institute Of Technology

Visakhapatnam, India

Bachelor of Technology in Computer Science;

Jul. 2014 – May. 2018
