
PROFESSIONAL SUMMARY:

- Over **9+** years of strong software experience in design, development and deployment of web-based and Client-Server business applications and expert in working in all life cycles (**SDLC, Agile**).
- Strong expertise in **troubleshooting, maintaining, and automating** applications built using **Java/JEE, Spring Boot, RESTful APIs, SQL/NoSQL, Python, and Linux** environments.
- Experienced in **cloud computing (AWS)** with hands-on work using **EC2, S3, Lambda, CloudWatch, IAM**, and container orchestration tools like **EKS/ECS**.
- Skilled with **event-driven systems** and **message streaming** using **Kafka Listener** for real-time data processing.
- Strong background in **observability and monitoring** using **Datadog, Splunk, and ELK Stack**, ensuring proactive detection and resolution of issues.
- Experienced with **CI/CD pipelines, Terraform, CloudFormation**, and DevOps practices to enhance automation, reliability, and scalability.
- Proven ability to lead cross-functional incident response efforts, perform **root cause analysis (RCA)**, and mentor engineers to drive **operational excellence and best practices**.
- Proficient in implementation of frameworks like **Struts, Spring, JSF**, ORM frameworks like **Hibernate**.
- Transaction implementation (CMP, BMP, Message-Driven Beans), **JMS, Struts, Spring, Swing, Hibernate, Java Beans, JDBC, XML, Web Services, JNDI, Multithreading Executor Services** etc.
- Experience in **Angular.js**.
- Developed Microservices to provide **RESTful API** utilizing Spring Boot with Spring MVC.
- Good experience with **Spring AOP, Spring Transactions, Spring Security, Spring Quartz batch jobs**.
- Worked and having knowledge on **Spring Cloud Services**. Developed UI screens using **HTML, JavaScript, XML, and Angular JS**.
- Worked on troubleshooting Java applications, writing and optimizing **SQL queries**, ensuring adherence to **SLAs**, and effectively managing incident resolution in high-pressure environments
- Implement the **JavaScript/JQuery** frameworks such as **Angular** for **MVW/MVC** framework.
- Experience with messaging systems like **Kafka** and **Kafka** event sourcing.
- Expertise in back-end/server-side java technologies such as: **Enterprise Java Beans (EJB), Java Persistence API (JPA), Java Messaging Service (JMS), Java Data Base Connectivity (JDBC), Java Naming and Directory Interface (JNDI), Remote method Invocation (RMI)**.
- Expertise in developing **SOA (Service Oriented Architecture), REST and J2EE Web Services** based on **SOAP, WSDL, UDDI, JAX-WS, JAXB, JAX-RPC** using tools like **Apache Axis**.
- Worked extensively with Core Java, **Multithreading**, and Collections. Expertise in developing **SOA (Service Oriented Architecture) and J2EE Web Services** based on **SOAP, RESTFUL, WSDL, UDDI, JAX-WS, JAXB, JAXRS, JAX-RPC** using tools like **Apache Axis**.
- Excellent experience with major relational databases – **Oracle 8i/9i/10g, SQL Server 2000/2005/2008, DB2, My SQL**.
- Worked on Grid Controls, Pie Charts and other Swing Components Expert level skills on **JQuery, JavaScript, AJAX, Adobe Flex, JSON, HTML, DHTML, CSS**.
- Expertise in software configuration management using **CVS, SVN** and **IBM Clear Case**. Hands on experience with build tools like **ANT, Maven** and logging tools like **Log4J**. Expertise in testing with **JUnit** using tools like **JMeter**. Experience in **Agile** software development process, **Test Driven Development** and **Scrum**.
- **Production Support**-Provided development (quick fixes) and technical support for complex/ critical applications. Coordinated with other teams to resolve end-user issues promptly.
- Analyzed and resolved high-priority production incidents by performing **root cause analysis (RCA)** and implementing permanent corrective actions.
- Created and maintained **incident, problem, and change management** tickets through tools such as **ServiceNow and Jira**, ensuring SLA adherence.
- Created detailed **production runbooks, RCA documentation, and knowledge base articles** to support operational excellence and team knowledge sharing.

Java/J2EE Technologies	Servlets, JSTL, JDBC, JMS, JPA JNDI, RMI, EJB, JFC/Swing, AWT, Java Beans, Applets, Multi-threading, Java Networking, Spring data, Spring Boot, Spring framework, Spring JDBC Templates, java mail, Google API, Hibernate 3.2/3.5, Web Services, SOAP, RESTFUL
Programming Languages	Java JDK1.4/1.5/1.6/1.7, C++, C, SQL, PL/SQL
Application/Web Servers:	Oracle/BEA WebLogic 8.1/9.1, IBM WebSphere 5.1/6.0/6.1/7.0, JBoss, Tomcat 5.0.28/6.0, Jetty Server, jenkins
Frameworks	Struts 2.x/1.x, Spring 3.x, Hibernate 3.x, JSF 1.2/2.0
IDEs	Eclipse 3.x, IBM WebSphere Application Developer 5.x, IBM RAD, STS
Web technologies	JSP, JavaScript, jQuery, AJAX, XML, XSLT, HTML, DHTML, CSS, Bootstrap, Angular JS, Ext JS
Web Services	JAX-WS, JAX-RPC, JAX-RS, SOAP, WSDL, UDDI, REST
XML Tools	JAXB, Apache Axis, Altova XMLSpy
Methodologies	Agile, Scrum, RUP, TDD, OOAD, SDLC Waterfall model
Modeling Tools	UML, Rational Rose, Visio
Testing technologies/tools	JUnit, JMeter, HtmlUnit
Database Servers	Oracle 8i/9i/10g/11i, DB2, SQL Server 2000/2005/2008, MySQL, Informix and DB2.
Version Control	CVS, SVN, Rational clearcase
Build Tools	ANT, Maven
Platforms	Windows 2000/98/95/NT4.0, UNIX

SKILLS:

WORK HISTORY:

JUL 21- Current

Role- Principal Software Engineer

Client- Fidelity Investments, Raleigh, NC

Team Size- 15

Description:

Fidelity Health Benefits: FHB Recordkeeping supports around various work events like New Hire, Annual Enrollment etc. Scheduled events are processed on the specific schedule based on the configured time period for the client. This application provides user dashboard to see the events processed, the communications sent to the specific participants.

Responsibilities:

- Involved in the design and development phases of **Scrum Agile Software** Development.
- Used JavaScript framework, like **Ext JS** for building interactive cross-platform web applications, using **HTML5, CSS3, angular**.
- Implemented microservices architecture using Spring Boot and Spring Cloud for modular application development.
- Used Dependency Injection feature of **spring** framework and involved in writing the database integration code using **Hibernate**.
- Implement the **JavaScript/JQuery** frameworks such as **Angular** for **MVW/MVC** framework.
- Used **Spring framework configuration files** to manage objects and to achieve dependency injection.
- Involved in implementing DAO pattern for database connectivity and **Hibernate** for object persistence.
- Monolithic application was divided into small individual units using **microservices** and implement the existing techniques.
- Developed reactive microservices with Spring WebFlux for high-throughput applications.
- Coordinated with development teams to apply **hotfixes** and **patches** for production bugs and provided detailed documentation for long-term fixes.
- Executed complex **SQL operations** (e.g., INSERT, UPDATE, DELETE, MERGE, joins, and triggers), optimized queries, and resolved database-related production issues by designing and maintaining **stored procedures, functions, and views**.

- Implemented observability improvements with Datadog and Splunk to track application health.
- Collaborated with SRE and DevOps teams to improve uptime, scalability, and release reliability.
- Mentored junior engineers in troubleshooting, automation scripting, and CI/CD best practices.
- Creating **microservices** using **Spring Boot** framework and exposed it to an external system.
- Used **JMS API** and **Active MQ** to send and receive messages from one application to the other.
- Applied Object Oriented Programming (OOP) concepts (including UML use cases, class diagrams, and interaction diagrams).
- Designed front-end integration with Angular and React for end-to-end application delivery.
- Shared client side and server-side page rendering stack using **Node.JS** framework **Express JS**.
- Used **Kafka** for Publish/Subscribe pattern in application dealing with messaging.
- Used Java/J2EE Design patterns like Business Delegate and Data Transfer Object (DTO).
- Played key role in the quality assurance of the products delivered, by doing internal code reviews, implementing **Hudson**, and promoting **TDD** and unit testing.
- Contributed to continuous delivery pipelines and supported **DevOps** culture in production deployments.
- Used **JUnit** for unit testing and as logging frameworks.
- Managed **on-call rotations** and escalated critical issues to senior leadership, maintaining service level agreements (SLAs) for high-availability applications.
- Managed Terraform state, workspaces, and CI/CD deployment pipelines.
- Managed incident tickets from creation to resolution, ensuring adherence to SLA targets.
- Drove several applications from development phase to production phase using Continuous Integration and Continuous Deployment (CICD) model using **Apache Maven**.
- Involved in Iterative development using **Agile Process**.
- Used **GIT** for version control of the source code.
- Provided detailed **weekly status reports**, documenting activities completed, issues encountered, and upcoming tasks for improved project transparency and planning.
- Responsible for delivering changes to different Development, Integration and User Acceptance Testing regions, supporting User Acceptance testing and addressing defects and supporting the system in Production and fixing Production defects.

Environment:

J2EE, Spring framework, Spring MVC, Spring Boot, Spring JPA, Spring AOP, Jira, Java 1.8, Hibernate 4.x, Kafka, JSON, Angular, Jenkins, Gradle, Restful, XML, DBEaver, Java Beans, JSON, JavaScript, Tomcat, Agile Methodology, GIT, Junit 4.9, HTML/DHTML

JUL 19 – JUN 21

Role- Software Engineer

Client- Wells Fargo, Charlotte, NC

Team Size- 10

Description:

Print Delivery Hub: Print Delivery Hub is a Web application that will serve as the traffic gateway for all file exchanges between Wellsfargo and RR Donnelly. PDH is also used to support Product Migration and Insert Plan Management. This application also provides users a dashboard to view jobs processed.

Responsibilities:

- Involved in various phases of **Software Development Life Cycle (SDLC)** of the application like Requirement gathering, Design, Analysis and Code development.
- Responsible for creating the detailed design and technical documents based on the business requirements.
- Used Dependency Injection feature of spring framework and involved in writing the database integration code using **Hibernate**, leveraged the AOP features of Spring framework to handle exceptions.
- Used **Spring framework configuration files** to manage objects and to achieve dependency injection.
- Involved in implementing DAO pattern for database connectivity and **Hibernate** for object persistence.
- Responsibilities include designing and developing new back-end services and providing mentorship to others on my team.
- Integrated authentication and authorization using OAuth2 and JWT tokens in Spring Security.
- Provided **on-call production support** for Java applications, resolving performance issues, database connection errors, and application crashes. Used **Splunk** and **AppDynamics** to monitor application health, detect anomalies, and generate performance dashboards.

- Monitored database health and optimized SQL queries for faster performance by indexing frequently queried tables and optimizing joins.
- Monitor application health and system performance using tools like Splunk and AppDynamics to proactively detect and resolve potential issues.
- Collaborate with development teams to implement permanent fixes for recurring production issues and defects.
- Used **Spring MVC** to handle/intercept the user requests and used various controllers to delegate the request flow.
- Worked on development of a web application using front end MVC framework **Angular, Node Js, HTML4, CSS, JavaScript**.
- Responsible for developing all the UI pages using **HTML, DOM, CSS, JSON, TypeScript, Angular**.
- Used the vertex x to achieve reactive programming in one of the modules.
- Used **Angular Reactive** Forms to implement complex forms and performed the validations using form builder.
- Analyzed logs and metrics using ELK Stack to track application performance and identify issues.
- Creating **microservices** using **Spring Boot** framework and exposed it to an external system.
- Developed **REST Web Services clients** to consume those Web Services
- Used **Spring framework configuration files** to manage objects and to achieve dependency injection.
- **Apache Kafka** was used to send message objects to client queues and topics.
- Developed RESTful APIs and backend services leveraging **Java, Spring Boot**, and **NoSQL** technologies (**MongoDB, Cassandra**) for high-performance data handling.
- Solve **unique and complex technical problems** with broad impact on the business within SLA.
- Unit testing, smoke testing and Integration Testing of application.
- Ongoing support and maintenance of the application of defects and Fixing them.
- Implemented database monitoring, indexing, and replication strategies in **NoSQL environments (MongoDB, Cassandra)** to ensure reliability and high availability
- Participating UAT testing and production readiness.
- Monitored database health and optimized SQL queries for faster performance by indexing frequently queried tables and optimizing joins.
- Monitor application health and system performance using tools like Splunk and AppDynamics to proactively detect and resolve potential issues.
- Automated common support tasks, improving incident resolution time and accuracy.
- Enhanced system observability using Splunk dashboards and ELK Stack integration.
- Partnered with DevOps team to improve CI/CD deployment automation and rollback safety.
- Conducted detailed root cause analysis and prepared postmortem reports for critical incidents.
- Collaborate with development teams to implement permanent fixes for recurring production issues and defects.
- Conducted unit and integration testing across **SQL and NoSQL** environments.
- Used the vertex x to achieve reactive programming in one of the modules.
- Used **Log4j** for tracking errors and debugging the code.
- Managed Informatica ETL job monitoring, performance tuning, and recovery for data transfer workflows.
- Automated common support tasks, improving incident resolution time and accuracy.
- Enhanced system observability using Splunk dashboards and ELK Stack integration.
- Partnered with DevOps team to improve CI/CD deployment automation and rollback safety.
- Conducted detailed root cause analysis and prepared postmortem reports for critical incidents.
- Involved in doing a code refactoring and code reviews.
- Involved in implementing DAO pattern for database connectivity and Hibernate for object persistence.
- Played key role in the quality assurance of the products delivered, by doing internal code reviews, testing.
- Used JUnit for unit testing and as logging frameworks.
- Created **Jenkins** jobs for continuous integration and continuous delivery.
- Used **Git** as a Version Control Tool
- Involved in Iterative development using **Agile Process**.
- Created and executed unit and regression test scripts; created personal and common test data, tracked actual vs. expected results, and evaluated quality of modules created.
- Responsible for delivering changes to different Development, Integration and User Acceptance Testing regions, supporting User Acceptance testing, and addressing defects and supporting the system in Production and fixing Production defects.

Environment:

J2EE, Spring framework, Spring MVC, Spring Boot, Spring JPA, Spring AOP Rally, Java 1.8, Hibernate 4.x, Vertex, JSON, Jenkins, Gradle, Restful, Angular, XML, SQL, Java Beans, Kafka, JSON, JavaScript, Oracle 12c, Tomcat, Agile Methodology, GIT, JUnit 4.9, HTML/DHTML, CSS3, MongoDB, Cassandra

FEB 17 – JUN 19

Role- Sr. Java/ J2EE Full Stack Developer

Client- Broadridge Financial Solutions, New York, NY

Team Size- 15

Description:

Presentment: Presentment/Post edge is a Web application that provides search and presentment of documents to support client and Broadridge roles. This app is used for accessing the client document archives for their Trade Confirms, Statements, tax or any type of documents stored in their archives. A user can access the presentment document site for by entering the appropriate URL in their browser. This logon is managed by the Broadridge SiteMinder application which maintains the User IDs, their entitlements and passwords.

Responsibilities:

- Developed **MVC design pattern**-based User Interface using **JSP, XML, HTML, CSS, Struts and React**.
- Developed the **UI component** architecture and API for application integration framework using **Angular and React JS**.
- Provided 24/7 production support for the released applications and sorted out issues, if any.
- Designed and developed new features for the server stack, written in mix of **Java and Scala**.
- Involved in the design and development phases of **Scrum Agile Software** Development.
- Used JavaScript framework, like Ext JS for building interactive cross-platform web applications, using HTML, CSS, Ajax, and DOM scripting.
- Responsible for creating the detailed design and technical documents based on the business requirements.
- Used **Struts validator framework** to validate user input.
- Drove several applications from development phase to production phase using Continuous Integration and Continuous Deployment (CICD) model using Apache Maven.
- Responsible for troubleshooting application issues on Apache web servers and database servers running on Linux.
- Used JMS API and ActiveMQ to send and receive messages from one application to the other.
- Shared client side and server-side page rendering stack using **Node.JS** framework.
- Created XML files for storing the data required for module.
- Applied Object Oriented Programming (OOP) concepts (including UML use cases, class diagrams, and interaction diagrams).
- Developed utility classes, which allows easy translation from XML to Java and back and Property Reader to read properties from a flat file.
- Developed window layouts and screen flows using **Struts Tiles**.
- Used Kafka messaging system for publishing.
- Implemented **Swagger/Swagger UI** to streamline endpoint documentation.
- Played key role in the quality assurance of the products delivered, by doing internal code reviews, and promoting **TDD** and unit testing.
- Used **JSTL** and **JavaScript** in front end design.
- Used JUnit for unit testing and as logging frameworks.
- Involved in Iterative development using **Agile Process**.
- Used **SVN** for version control of the source code.
- Created Web services using Apache Axis 2 for communication with other application.

Environment:

Java/J2EE 1.6, JSP, Servlets, Spring 3, Hibernate 3, Struts 2, XML Web service, Apache Camel, SOAP, JAX-WS, JMS, ActiveMQ, MySQL, JavaScript, AWS, Angular, React JS, XML, XSLT, Eclipse IDE, AJAX, JavaScript, Apache Ant 1.7, JDBC, Swagger UI, Windows XP, JUnit 3.8, Log4j, CSS, log4j, CVS, Apache Axis 2, Node.JS, React JS, AWS.

JAN 15– JUL 15

Role- Java Developer

Client- Infosys, India

Responsibilities:

- Involved in the **Requirements collection & Analysis** from the business team.
- Created the design documents with **use case diagram, class diagrams, and sequence diagrams** using **Rational Rose**.
- Implemented the MVC architecture using Apache **Struts1.2** Framework.
- Implemented **Action Classes** and **server-side validations** for account activity, payment history and Transactions.
- Implemented views using **Struts tags, JSTL2.0** and **Expression Language**.
- Implemented **Tiles Framework** for the **view's layout**.
- Implemented **session beans** to handle **business logic** for fund transfer, loan, credit card & fixed deposit modules.
- Worked with various java patterns such as **Service Locator** and **Factory Pattern** at the business layer for effective object behaviors.
- Worked on the **JAVA Collections** API for handling the data objects between the business layers and the front end.
- Worked with **JAXB, SAXP** and **XML Schema** for exporting data into XML format and importing data from XML format to data base and **JAXB** in the web service's request response data marshalling as well as marshaling process.
- Implemented the **web services** client to consume the third-party service API for validating credit cards. Used **XMLWeb Services** using **SOAP** to transfer the amount to transfer application that is remote and global to different financial institutions.
- Designed the front-end applications, user interactive (UI) web pages using web technologies like **HTML, XHTML**, and **CSS**.
- Wrote **SQL, PL/SQL, SQL*Plus** programs required to retrieve data using cursors and exception handling.
- Using advanced level of **jQuery, AJAX, JavaScript, CSS**.
- Used **Java Messaging Services (JMS)** for reliable and asynchronous exchange of important information such as payment status report.
- Developed **Unit test cases** using **JUnit**.
- Developed **Ant scripts** and developed builds using **Apache ANT**.
- Used **Log4J** to capture the log that includes runtime exceptions.
- Used Clear **Case** for **source code maintenance**.

Environment:

J2EE, Java, Struts, Tiles, HTML, XHTML, CSS, jQuery, AJAX, JavaScript, JSP, PL/SQL, JNDI, Clear Case, SOAP, WSDL, UDDI, JAXB, JAXP, Schema (XST), EJB 2.0, ANT, JavaScript, JMS, Rational Rose, WSAD, DB2.
