Phone: 405 922 2325

Summary:

IT Infrastructure and Systems Engineer with 6 years of hands-on experience managing Windows, Linux, and cloud environments. Strong background in on-prem and Azure infrastructure, VMware vSphere, Hyper-V, and virtualization performance tuning. Skilled in administering Windows Server, RHEL, Active Directory, Office 365, and Exchange. Experienced in server maintenance, patching, storage integration (SAN/NAS), and automation using PowerShell, Bash, and Python. Proven ability to support 100+ users, deliver high-quality technical troubleshooting, and optimize system performance in both production and development environments. Adept at creating documentation, improving workflows, and ensuring stable, secure, and scalable IT operations.

Technical Skills:

- **Infrastructure & Cloud:** Experience with on-prem servers, Microsoft Azure, VMware vSphere, VMware Horizon, Azure Virtual Desktop (AVD), Azure AD, and Proxmox.
- **Operating Systems:** Skilled with Windows Server 2016/2019/2022, Windows 10/11, and Red Hat Enterprise Linux.
- **Server Management:** Handles updates, patching, and SAN/NAS storage integration for Windows and Linux servers.
- **Automation & Scripting:** Uses PowerShell, Python, and Bash to automate tasks and improve system efficiency.
- **Technical Support:** Provides end-user support for Windows, Office 365, and applications, including documentation and remote/on-site troubleshooting.
- **Exchange & Office 365:** Experienced in managing Microsoft Exchange and Office 365 accounts, email settings, and system configurations.
- **Cloud & Virtualization:** Works with Azure, Hyper-V, VMware vSphere, vCenter, and ESXi for virtual machine and cloud management.
- **VM Optimization:** Performs storage integration and VM performance tuning for VMware vSphere and Hyper-V environments.

Professional Experience

Vakula Technologies Inc
System Engineer

Sep 2023 – present

- Administered and supported 250+ RHEL and CentOS servers across production and development environments, ensuring high availability, stability, and peak performance.
- Installed, configured, and maintained Red Hat Linux systems, performing kernel upgrades, security patching, and lifecycle management to meet compliance standards.
- Implemented end-to-end monitoring using Prometheus and Grafana, configuring node exporters to track system health, resource utilization, and performance trends.
- Conducted proactive capacity planning, forecasting CPU, memory, and storage requirements to support growing infrastructure demands.
- Delivered 24/7 production support, rapidly diagnosing Linux OS, system, and network issues while meeting strict SLA timelines.
- Managed user administration, access controls, and permissions, enforcing RBAC-based security policies to protect mission-critical systems.

- Configured and supported NFS, Samba, and FTP services for secure, efficient file sharing and remote access across Linux environments.
- Performed backup and recovery operations using NetBackup, ensuring data integrity and reliable disaster recovery readiness.
- Automated provisioning and package deployments with Kickstart, YUM, and RPM, improving consistency and reducing manual overhead.
- Administered VMware ESXi environments, deploying and optimizing Linux virtual machines for performance and resource efficiency.
- Configured, troubleshot, and maintained network services such as DNS, DHCP, and TCP/IP to ensure uninterrupted connectivity.
- Executed regular system health checks, resolving storage and file system issues using tools like e2fsck and xfs_repair to prevent outages.
- Collaborated closely with VMware, storage, and network teams to maintain seamless integration across infrastructure layers.
- Developed detailed technical documentation, including SOPs and troubleshooting guides, enhancing team efficiency and operational consistency.

Mahavir Auto, Hyderabad, India
IT System's Operator

Oct 2016 – June 2021

- Delivered advanced technical support for Windows environments, rapidly diagnosing and resolving hardware, software, and networking issues in high-demand settings.
- Provided Tier 2/3 support for Windows Server, VMware, virtualization, and enterprise network infrastructures.
- Administered and optimized VMware vSphere and Hyper-V environments, ensuring performance, stability, and efficient resource utilization.
- Managed Windows OS deployments (7/10/11) and led large-scale imaging using MDT, WDS, PXE, and Autopilot.
- Performed Active Directory administration, including user lifecycle management, permissions, security, and Group Policy updates.
- Supported 100+ users with remote and onsite troubleshooting for Office 365, network issues, and hardware failures.
- Configured and maintained Microsoft 365 services, Outlook Anywhere, mail flow, and database integrity.
- Monitored system performance and recommended upgrades to enhance efficiency and reliability.
- Installed and managed printers, peripherals, remote access tools, and standard desktop applications.
- Oversaw backup operations and recovery processes to maintain data integrity and business continuity.
- Delivered enterprise desktop support across multiple locations, ensuring consistent service quality.
- Created and maintained detailed technical documentation to streamline workflows and support knowledge sharing.
