QA Automation Engineer

QA Automation Engineer/SDET with over 8 years of experience delivering high-quality testing solutions across Banking, E-commerce, and Healthcare domains. Expertise in developing and maintaining test automation frameworks, API and performance testing, and CI/CD integration within Agile environments. Solid understanding of API development and integration principles. Adept at collaborating with cross-functional teams to reduce defects, accelerate releases, and enhance software quality through scalable automation practices. Skilled in leveraging modern test tools and cloud-based platforms to streamline workflows and drive measurable efficiency gains.

Key Skills

Selenium WebDriver | Cypress | Playwright | Rest Assured | TestNG | Cucumber | Pytest | Jenkins
Azure DevOps | GitHub Actions | AWS | Docker | SQL | MongoDB | JMeter | Gatling
Postman | Jira | TestRail | Zephyr | Node.js

Experience

Accenture, San Antonio, Texas

April 2024 – May 2025

SDET/Automation Engineer

Developed detailed Test Plans, Test Strategies, and Test scenarios, which saved 25% of project time with a shared understanding among teams. Collaborated with cross-functional teams in Agile sprints, ensuring 100% of user stories were validated before release.

- Partnered with developers during the SDLC to refine requirements and support early issue detection.
- Built and maintained end-to-end automation solutions, including system-level testing and integration workflows, ensuring seamless coverage across complex platforms.
- Designed and implemented a scalable Page Object Model (POM) framework using Selenium with Python and pytest for modular and reusable test automation.
- Created separate page classes to encapsulate web elements and page-specific actions, improving maintainability and reducing code duplication.
- Designed and implemented Playwright automation frameworks (Java/TypeScript), achieving 95% regression coverage and reducing test cycle time by 40%.
- Implemented BDD-style automation with Playwright + Cucumber, improving collaboration between QA, Dev, and Product teams by 30%.
- Optimized test execution speed and reduced flaky test occurrences by implementing advanced Playwright features like autowaiting, assertions, and custom hooks.
- Conducted API + UI end-to-end testing with Playwright, ensuring seamless validation of microservices and frontend flows. Performed load and performance testing using JMeter to evaluate application scalability.
- Conducted cross-browser testing across Chrome, Edge, and Safari to ensure consistent user experience.
- Ensured QA best practices, coding standards, and **shift-left testing** were followed throughout the project lifecycle.
- Integrated automated test suites into Jenkins pipelines hosted on AWS EC2, enabling seamless CI/CD and reducing regression testing time by 60%.
- Performed **API automation** using Postman/SoapUI with validations for payloads, status codes, and backend workflows.
- Utilized Jira for agile project tracking, sprint planning, and managing epics, stories, tasks, and bugs across cross-functional teams.
- Partnered with 4+ cross-functional agile teams to embed automated testing early in the SDLC, contributing to a 30% reduction in escaped defects during production. Managed version control using GitHub, followed Git best practices (pull requests, branching, tagging).

- Performed end-to-end testing of microservices using Rest Assured, logging requests/responses, and validating status codes, headers, and payloads. Implemented data-driven API tests with JSON/XML schema validation using Rest Assured.
- Used complex joins, self joins, inner joins, and different clauses like WHERE, HAVING, FROM, different aggregate functions, and wild cards to validate data.
- Worked closely with developers and actively participated in Agile Scrum environment ceremonies like Sprint Grooming, Planning, Sprint Demo, Retro & daily meetings in the entire SDLC and STLC of an application.

McKinsey and Company, San Francisco, California

December 2020 – April 2024

QA Automation Engineer

Involved in reviewing software requirements and specification documents like BRD and FSD to write the manual and automation test cases. Followed agile methodology throughout the project and daily attended regular standup meetings.

- Applied strong knowledge of software testing principles, SDLC, and Agile methodologies to align testing strategies with project goals. Collaborated with DevOps teams to support automated testing workflows within AWS-based CI/CD pipelines.
- Implemented API and UI combined testing (hybrid) using Playwright with JavaScript/TypeScript and Node.js to validate front-end interactions with backend services, ensuring faster full-stack test cycles.
- Cut test execution time by 60% by parallelizing test runs and integrating automation into CI/CD pipelines with GitHub Actions and Jenkins. Responsible for designing and implementing a Java Selenium Webdriver automation framework for Regression and Functional test suites to reduce manual efforts by 30%.
- Extensively did database testing using complex SQL queries and joins to validate data integrity in PostgreSQL. Hosted Jenkins on AWS EC2 instances and configured S3 buckets for storing build artifacts and test reports.
- Built a reusable Rest Assured framework to test real-time fund transfer APIs, handling API calls under peak load. Performed manual testing of 100+ RESTful APIs using Postman to validate CRUD operations, authentication, and data integrity.

ACL Digital, San Jose, California

November 2019 – November 2020

QA Automation Engineer

Conducted QA/UIT/UAT/Regression Testing for Connectivity, Data Flow, Data Validation, and Error handling.

- Developed and tracked a comprehensive test automation suite using Selenium with BDD/TDD, reducing manual testing time by 40% and increasing regression testing efficiency by 30%. Executed manual test cases and logged defects in Jira, improving defect tracking and resolution by 10%.
- Applied data-driven testing with CSV/JSON files in Postman Collection Runner, executing 100+ test iterations in batch.
- Optimized sprint planning and backlog refinement in Jira, increasing sprint completion rate by 35%.

LatentView, San Jose, California

September 2017 – October 2019

QA Automation/Manual Tester

Analyzed business requirements, documented business requirements specifications, wrote Test plans and Test cases.

- Executed manual test cases and logged defects in Jira, improving defect tracking and resolution by 10%.
- Manually executed Test Cases for Functional Testing, GUI Testing, Regression Testing, Smoke Testing, and wrote automation test scripts using Selenium Web Driver. Continuously reported defects using Jira as a defect management tool.
- Validated APIs with various authentication methods, including Bearer Token, OAuth 2.0, and Basic Auth.
- Maintained strict adherence to software testing protocols, resulting in a 10% improvement in application performance.

Education

Bachelor of Accounting, B.Acc.
