

Anirudh M

Sr. Java Developer

Email : Anirudh.4m1@gmail.com

Phone: +1 475-328-0302

PROFESSIONAL SUMMARY

- Sr. **Java Developer** with **9+ years** of experience with **OOPs, Java/J2EE technologies** and all phases of the Software Development Life Cycle (SDLC), including **design, development, testing, and deployment of web-based and enterprise business applications**.
- Solid grounding in coding principles and the ability to develop **RESTful multi-tier apps** using **Spring MVC, Spring Boot, Hibernate, Spring AOP, Angular4/6/8, Kafka, Jenkins, OpenShift technologies, Docker, Ansible, and AWS**.
- Experience with a variety of SDLC (Software Development Life Cycle) paradigms, including **SCRUM, RAD, and Waterfall**.
- Solid understanding of Java/J2EE design patterns including **MVC, Singleton, Factory, Session Façade, and Delegate pattern Servlets, JMS, Spring, and JSF My Faces, Rich Faces, Ice Faces, Prime Faces, and JPA, JAX B**.
- Proven expertise in the construction of user interfaces for the web utilizing **HTML5, ANGULAR 6, ANGULAR 8, REACT JS, VUE.JS, XHTML, DHTML, CSS3(SAAS/LESS), Bootstrap, JavaScript, JQUERY, and AJAX**.
- Good Expertise in analyzing the **Document Object Model (DOM) Layout, DOM Functions** and **Java script functions**, cascading styles across cross browser using **Fire Bug, Developer tool bar**.
- Experience in using **React.js components, Forms, Events, Keys, Router, plus Redux, Animations** and **flux concept**.
- Good Expertise in **React.js** for creating interactive UI's using **one way data flow, virtual DOM, JSX, React Native concepts**.
- Broad knowledge of Core Java concepts like **Streams API, Lambda Expressions, Multithreading, Transaction Management, Exception Handling, and Collection API**.
- Hands on Experience in writing **PL/SQL** optimization, creation of complicated stored procedures, joins, and views for database objects in **Oracle, MySQL, MS SQL Server, and MongoDB**.
- Experience in creating build scripts using **Maven, Gradle** and writing **Docker** files for creating **Docker images** and then deploying the **Docker containers** onto **AWS EC2 instances**.
- Excellent Expertise in **Amazon Web Services (Amazon S3, Amazon EC2, Amazon SQS, Amazon Simple DB, Amazon Elastic Load Balancing, Amazon EBS, Amazon CloudFront, and Amazon Lambda)**.
- Excellent working experience of the Spring Framework's various modules, including **Spring Core Container Module, Spring Application Context Module, Spring MVC Framework Module, Spring Boot, Spring AOP Module, Spring ORM, and Spring JDBC**.
- Object-oriented JavaScript libraries were used to build the reusable service components using **REACT, Angular 2/5/6/7/8, Vue.js, Angular JS, and Node.js services**.
- Implementing SOAP services with Axis-2 and Apache CXF while working on **WSDL and WADL (JAX-WS frameworks)**.
- Implemented security features Secure authentication with **LDAP, OAuth 2.0, Spring Security, SSL, and SiteMinder (SSO), OAuth2** for creating tokens in the application using **Spring Security**, and **JWT** for providing tokens.
- Implemented authentication to web services using **OAuth 2.0 and Spring Security** and worked with **Spring Cloud Config** and **Apigee API-gateway** in the Spring Cloud to provide weighted load balancing based on numerous criteria like traffic and resource utilization (User Access Management).
- Used **Spring Boot** to develop Micro Services extensively, and **Swagger** to produce dynamic documentation for **RESTful web services**.

- Developed **HQL** queries for data access and used Spring Boot to integrate Micro Services with Hibernate ORM.
- Experience in testing knowledge of the **Mockito-based JUnit Framework**.
- Thorough knowledge of **Selenium-based** integration testing and Java-based automated behavioral testing of applications. **Jenkins CI/CD** pipeline was used to integrate the code repository and automate the deployment process.
- Using **Jenkins** with GitHub to establish a **continuous integration (CI) and continuous deployment (CD)** pipeline using Docker container services to deliver the applications.
- Solid understanding of managing **Kubernetes clusters and Docker containers** on the OpenShift platform.
- Maintained code repositories using various version control tools like **GIT, GIT LAB, SVN, CVS, Bitbucket** and **Bamboo**.
- Working experience using **Splunk, ELK** as monitoring tools and **Redis cache** as a Caching service and using **NATS** java client for publishing and consuming messages.
- I have experience working with **Microsoft Azure services** like **Azure ARM Templates, Azure SQL Database, Virtual machines, Azure Active Directory, Azure VPN Gateway, Azure Fabric, Azure search, App services, Notification hub, Cosmos DB**.
- Used message-oriented middleware such as **Apache Kafka, Active MQ, Rabbit MQ, and IBM MQ** to coordinate applications.

TECHNICAL SKILLS

Programming Languages	Java (11/8/7/6), C, C++, C#, PL/SQL, Python.
Java/J2EE Technologies	JSP, JSTL, Servlets (3.1,3.0), JDBC, EJB, Java Beans XSD, JAX-RS, JAX-WS, SOAP, WSDL, Axis, Apache CXF, Java Security.
Micro Services	Spring Boot, Rest API, Spring Core, Spring Integration, Spring Security.
Frameworks	Struts 2.0/1.0, Hibernate 4.x/3.x, Spring 3.0, Spring Batch, Spring Security, Spring AOP, Spring Core, JSF, Spring IOC, Spring Boot, React JS, Angular JS.
Web Technologies	Servlets, JSP, JavaScript, HTML5, CSS3, jQuery, AJAX, JSON, DOJO, Node.JS, React.JS, Angular.JS, Bootstrap, ExtJS, XML, XSL, XSLT, SAX, DOM, XML Beans and JAXB
Database	SQL Server, MySQL, Oracle, MongoDB, Cassandra, CouchDB, Dynamo DB and Graph DB, PostgreSQL.
Web Services	Oracle SOA, RESTful, SOAP, UDDI, and WSDL.
Messaging	Rabbit MQ, IBM MQ, Apache Active MQ, Apache Kafka, and JMS (Java Message Service)
Application/ Web Servers	Apache Tomcat 8.0/7.x/6.x, IBM WebSphere 8.x/6.x, Oracle WebLogic 10.x/9.x, WebLogic, IBM WebSphere, Apache Tomcat, and JBoss
Design Patterns	Singleton, Business Delegate, Data Transfer Object, Façade, Data Access Object, MVC, Filter.
Methodologies	Waterfall, Agile, OOAD, and SCRUM
Testing Tools	Selenium, Log4J, JUnit, Mockito, Karma, and Mocha
Version Control	Bitbucket, SVN, CVS, GIT, and GIT LAB
IDEs	Eclipse, Net Beans, IntelliJ, Spring Tool Suite, Android Studio, Visual Studio, RAD.
Operating Systems	Windows, Unix, Linux, Mac OS
Cloud Technologies, Devops Tool & Others	AWS, EC2, Pivotal Cloud Foundry (PCF), GCP, Azure, Docker, JIRA, Log4j, Splunk, Redis, NATS, Bitbucket, Guidewire, Bamboo.

Education:

- B-Tech, EC Engineering from JNTUH, May 2017.
- Master of Science in Computer Information Systems, July 2019.

PROFESSIONAL EXPERIENCE**Client: Tiaa bank, Iselin, New Jersey****Nov 2023 to Present****Role : Sr. Java Developer****Responsibilities:**

- Followed Agile methodology for developing application and involved in analysis, design, development, and testing phases of Software Development Life Cycle.
- Developed the application using the Spring 4.x Framework and individual components were built using microservices.
- Involved in the complete Software Development Life Cycle including gathering Requirements, Analysis, Design, Implementation, Testing and Maintenance.
- Designed and Developed SQL database structure with Django Framework using agile methodology.
- Worked on designing, building, deploying, and maintaining Mongo DB and with cloud deployments using Maven, Docker, and Jenkins.
- Develop new frontend from the ground up using HTML5, CSS3, JAVASCRIPT, JQuery, Bootstrap, Angular 17, and NodeJS as front-end building Environment.
- Worked with various sources like relational databases, XML, JSON, CSV files to perform ETL operations to the target data marts/warehouses.
- Implemented RESTful Web services to retrieve data from client side and made REST API calls from Angular JS and parsed the data to project to client and handled the security and Authorization using Spring Security and OAuth1/2.
- Developed GUI using Python and Django for dynamically displaying the test block documentation and other features of Python code using a web browser.
- Implemented Kafka model which pulls the latest records into Hive external tables.
- Worked extensively on AWS components like Elastic MapReduce (EMR), Elastic Compute Cloud (EC2), and Simple Storage Service (S3).
- Responsible for loading customer's data and event logs from Kafka into HBase using REST API.
- Ingested data from RDBMS and performed data transformations and then exported the transformed data to Cassandra as per the business requirement.
- Worked on MongoDB database concepts such as locking, transactions, indexes, replication, schema design.
- Loaded the dataset into Hive for ETL (Extract, Transfer and Load) operation.
- Used ETL to extract, clean, transform and load data into the data warehouse/data marts and Implemented the ETL from S3 to Snowflake using python.
- Worked extensively on Web Services (SOAP&REST), XML, JMS and Spring Controller.
- Used Snowflake connectors for Tableau and developed reports using snowflake views/tables.
- Worked on designing and deploying a multitude application utilizing almost all the main services of the AWS stack (like EC2, S3, RDS, VPC, IAM, ELB, EMR Cloud watch, Route 53, Lambda and Cloud Formation) focused on high availability, fault tolerance environment.
- Created Terraform scripts for EC2 instances, Elastic Load balancers and S3 buckets. Implemented Terraform to manage the AWS infrastructure and managed servers using configuration management tools like Chef and Ansible.
- Used Test driven approach (TDD) for developing services required for the application and Implemented Integration test cases and developing predictive analytic using Apache Spark Scala APIs.

Environment: Java 8, HTML5, CSS3, JSP, JSTL, jQuery, React JS, Node JS, Angular 17, AWS, EC2, EBS, S3, Python, VPC, PyCharm, jQuery, MySQL, HTML, CSS, JavaScript, Ajax, Web Services, JSON, Angular, MongoDB, SQL Workbench.

Client: Verizon, Irving, Texas
Role: Sr. Java Developer

April 2021 to oct 2023

Responsibilities:

- Used Agile (SCRUM) methodologies for Software Development Lifecycle of the dynamic J2EE project.
- Used various components in Spring, which includes Spring IOC, AOP, Spring MVC, Spring JDBC, Spring JPA, Spring Securities, Spring Batch, Spring Quarts, and Spring Security.
- Used Spring MVC framework for design, development, and implementation of application.
- Designed and developed the UI using Spring view component, JSP, HTML, CSS and JavaScript, AJAX, JSON.
- Implemented the presentation layer utilizing JSP, HTML5, JavaScript, CSS3, ReactJS, jQuery, JSTL, and Tag Libraries.
- Architected and developed a custom, single-page, responsive web application leveraging ReactJS as the primary front-end framework.
- Involved in using JPA (Java Persistence API) frameworks and APIs such as Hibernate and JDO (Java Data Objects).
- Designed and implemented scalable, secure cloud architecture based on Amazon Web Services.
- Setup and built AWS infrastructure various resources, VPC EC2, S3, IAM, EBS, Security Group, Auto Scaling, and RDS in Cloud Formation JSON templates.
- Implemented automated local user provisioning instances created in AWS cloud and .
- Developed the legacy monolithic application and involved in migrating existing monolithic application to Microservice level Architecture based RESTful Service and deployments were done on AWS.
- Created monitors, alarms, and notifications for EC2 hosts using CloudWatch.
- Worked on Restful web services using Node.js and implemented mock services in Node.js with help of modules using Node.js server.
- Integrated Struts application with Spring Framework by configuring Deployment descriptor file and application context file in Spring Framework.
- Responsible for testing Policy Administration Guidewire implementation frameworks.
- Implemented service level authentication for API'S using OAUTH token, HMAC.
- Used J2EE design patterns like Front Controller, DAO, MVC, Business Delegate and Session Facade.
- Developed robust form management system with complete CRUD capabilities in React Native and Redux.
- Worked on ReactJS for creating interactive UI's using One-way data flow, Virtual DOM, JSX, React Native concepts.
- Worked in using ReactJS components, Forms, Events, Keys, Router, Animations and Flux concept.
- Implemented ReactJS code to handle cross browser compatibility issues.
- Used React JS to create views to hook up models to the DOM and synchronize data with server as a Single Page Application (SPA).
- Used Spring, Hibernate module as an Object Relational mapping tool for back-end operations over SQL database.
- Used Spring Integration to communicate with different web Services. Involved in build and deployment of microservices with Jenkins. Implemented Inheritance between tables using different hibernate strategies.
- Implemented Product-Retrieval Service as SOAP based service using Apache frameworks.
- Implemented asynchronous messaging services using AMQP such as Rabbit MQ.
- Used jQuery APIs to implement cross-domain calls and handling JSON responses.
- Performed unit testing using JUnit and Mockito aiding Test Driven Development in some scenarios.
- Provided ANT build script for building and deploying the application.
- Developed web services, SOAP message envelopes and headers using WSDL, UDDI, XML and JAXP.
- Involved in server and application configurations and logging using Log4j.

Environment: Agile methodology, Java, J2EE, AWS Cloud (VPC EC2, S3, IAM, EBS, Security Group, Auto Scaling, RDS), Spring, Hibernate, ReactJS, Rational Software Architect (RSA) 8.5.5.4, JAWS16.0, EJB, OAuth, Guidewire, Oracle11, Webservices, JavaScript, JSTL, SOAP UI, TOAD, jQuery 1.11, jQuery Data table, jQuery, Ajax, XML, JPA, Log4j and JSON.

Client: Horizon BCBS NJ
Role : Full Stack Developer

Feb 2019 to March 2021

Responsibilities:

- Participated in all phases of the project's SDLC, including requirement gathering, analysis, design, development, and testing, as well as the daily stand-up, Preplanning, and Retro meetings, all of which are done in accordance with Agile and SCRUM methodology.
- Involved in acquiring business requirements, project analysis, use case creation, and class diagram creation.
- MVC design pattern was used in the project's design and development.
- Utilizing Spring Boot and REST API, microservices-based architecture was implemented.
- Developed the front-end web pages for our login and customer enrolment portals utilizing HTML5, CSS3 (using SASS), media queries, JavaScript, and React JS.
- Used various features from ReactJS like data binding, routing, custom filters, and directives to meet various customized requirements.
- Building User Interface by using React.js/Redux, strong knowledge of state store, middleware, action creator, reducer, and container.
- Implementing client-side Interface by using ReactJS, Redux for SPA development and Used the ReactJS to develop user interface.
- Generate the server environments by using Browserify, flux to manage with targeted URLs for Uni-Directional data flows and to monitor the application and write the Client-Side code using React JS.
- Programmatic navigation by React-Router and client-side view rendering services by REACT JS Virtual DOM, state management by React-Redux.
- Worked on NoSQL database like Cassandra to store key values, for data analytics which is used as a Database.
- Installed the Kafka manager to track Kafka metrics and to monitor consumer latency. This manager has also been used to adding topics and partitions.
- Created ORM mappings to map Java 8 entities to database Graph QL tables and wrote Hibernate Criteria queries for data retrievals.
- Handled the search using Java 8's core concepts, such as parallel streams and filters through lambda expressions.
- Developed front-end applications using ReactJS, Flux, NodeJS and Docker and Built Spring based Java and Scala services to support Enterprise Web application.
- Implemented Test Driven Development (TDD) technique while unit testing the application using JUnit 4.0 and the Mockito framework. developed test scripts for automated testing using Selenium Web Driver.
- Exposed and utilized SOAP-based Web Services to facilitate system communication.
- Tested the front-end application using Karma testing frameworks.
- Authenticated users using OIDC and OAuth 2.0 to access RESTful services and deployed Application instance on JBoss and WebLogic Server.
- Using the ELK stack (Elastic Search, Log Stash, and Kibana) to create a complete system for transaction processing.
- Created test suites for each service using Azure endpoints in Ready API to test the services created in Azure APIM.
- Configured access groups for Azure Storage, Azure Blob storage and Azure Resource Group management with the help of solution architects' team.
- Used windows Azure to host the share platform applications in the cloud.
- Implemented Jenkins pipelines into Azure pipelines to drive all micro services built out to the Docker registry and then deployed to Kubernetes, Created Pods and managed using AKS.
- Focused on high-availability, fault tolerance, and auto-scaling while designing, developing, and deploying a variety of applications leveraging nearly the whole AWS stack (including EC2).
- Maintained, organized, and reviewed the Cassandra database's documents to guarantee data integrity, fix anomalies, and improve the database's overall maintainability.
- Created sophisticated SQL queries for the MySQL database by utilizing joins, stored procedures, functions, triggers, cursors, and indexes.
- Very Strong JIRA Skills to Track Issues and Communicate with Other Teams in Different Environments.

- GitLab is used for tracking issues and bugs, while Jira is utilized for project management and Log4j implementation is done for logging, debugging and error tracing.

Environment: Java8, OOPS, Lambda expressions, React.js, Spring MVC, Spring Boot v1.2, Spring Batch v3.0, Kafka, HTML5, CSS3, jQuery 3.0, Typescript, AJAX 4.1, JSON 3, NPM 5.5, Jenkins v2.0, PL/SQL, Microsoft Azure, Azure Application Insights, Azure Migrate, MySQL, DB2, Cassandra 3.0, AWS, EC2, IAM, JUnit, Selenium, Visual Studio, STS, JIRA, GIT, POSTMAN/REST Client, Jenkins, Windows, Agile, Scrum.

Client : COMCAST, Philadelphia, PA

August 2017 to Dec 2018

Role : Java Developer

Responsibilities:

- Accessed project requirements gathered by business analysts to understand the scope of the project.
- Utilized the AGILE software development methodology and created a comprehensive framework to support Test Driven development (TDD) using Dependency Injection for the software development process and to create high-quality applications.
- Utilizing the Struts framework for the front end and EJBs for the business components, the user will be presented with the data using a Struts/Tiles-based architecture.
- Experienced in implementing Micro services, Service Oriented Architecture (SOA) with XML based Web Services (SOAP/UDDI/WSDL) using Top Down and Bottom-Up approach and Used Struts, JSP, Servlets, and Custom tags to build the web UI.
- Developed and managed the user interface using Java Server Faces and jQuery, while also configuring and maintaining the Spring Framework's IOC container.
- JDK 1.7 and JRE 6 characteristics were used to implement batch jobs using Java multi-threading.
- Significantly worked on the Java Collections API for handling the data objects between the business layers and the front end. Examples of Java Collections used in the code are LinkedList, Queues, and HashSet.
- Used wide implementation procedures to disintegrate whole monolithic application into loosely coupled reusable Micro services. This laid the foundation for the simplicity in updating versions of existing technologies without hassle of deploying entire modules.
- Used Core Java technologies, including Entity and Session Beans, Serialization, Generics, Annotations, and Exception Handling, to construct back-end business logic.
- Built an MVC framework using the Node.js EXPRESS Server and Socket.io to deliver broadcast and chatting services from the front-end AngularJS to the back-end MongoDB.
- Proficient in the use of Hibernate Query Language (HQL), HSQL Named Queries, Criteria, and Projections to map Java classes using Middleware persistent frameworks like Hibernate/JPA Entities.
- Developed dynamic web pages using JSP and used the Struts Validation framework to perform validation.
- Created front-end code using an Ajax call in AngularJS and jQuery to retrieve data as JSON objects from controllers in a backend RESTful server. AngularJS controllers, directives, services, and route providers were then written to display the neatly structured output on web pages. To make the data searchable and sortable, an Angular.js filter was also employed.
- Created batch jobs using UNIX Shell Scripts to move data between servers.
- Created business objects with the help of POJOs and data access layers with the aid of JDBC.
- Created Ant scripts to deploy the system into the JBOSS Application Server.
- Knowledge of IBM MQ Series JMS asynchronous processing.
- Developed an application using J2EE components like Struts2, Hibernate, Java, JSP, and Servlets.
- Created sophisticated SQL queries for the MySQL database using joins, stored procedures, functions, triggers, cursors, and indexes.
- Worked on Google cloud platform GCP services, Compute engine, Cloud load balancing, Cloud storage, Cloud SQL, Stack driver monitoring and cloud deployment manager.

- Managed, Configured and Maintained GCE instances and GCP services.
- Evaluating performance of GCP instances, CPU, Memory Usage and setting up health checks, GCS and VPC Setup Alerting and monitoring using Stack driver in GCP.
- Leveraged stack driver service to setup alert, monitoring for GCP resources and also configured monitoring the logs for GKE and GCP instances.
- Defined GCP Security Groups which acted as virtual firewalls that controlled the traffic allowed reaching GCP instances and services.
- Translate business requirements into detailed use case scenarios highlighting cross functional impacts.
- Designed UML Use case diagrams, Class diagrams and Sequence diagrams using Visual basic.
- Developed JAX-WS SOAP services with data representation in XML using the Apache CXF framework.
- JSP was developed using Struts tag libraries, and Web.xml, Struts-config.xml, and action classes as well as action type classes were generated.
- Conducted unit testing using the JUNIT framework, and tested Action Classes using Struts Test Cases.
- Created business objects using POJOs and Maven's automated build files.
- Developed Hibernate query & criteria, sessions, transactions, mapping files, and Hibernate files to get data from MYSQL database.

Environment: Java 8, Multi-threading, Collections, OOPS, Spring IOC, MVC, AngularJS, jQuery, Node.js, Hibernate/JPA, HQL, JSP, Servlets, EJB, JAXB, Unix Scripting, JDBC, Unix, JBoss Server, MYSQL DB, Stored procedures, Query tuning, Design Patterns Singleton, Parameterized Statements, WebSphere 7.0, Maven, Shell Scripting.

Client : IPRISM TECHNOLOGIES, Hyderabad, India

Jan 2016 to July 2017

Role : Software Developer

Responsibilities:

- Involved in the Requirement Analysis, Design, Implementation, Testing, and Maintenance phases of the application's Software Development Life Cycle.
- Fixed bugs in Java, HTML, and SQL code so that an application could be connected to and used.
- Extensively involved in the integration of the Front-End web interface with the controller using Spring MVC.
- Worked on OAuth 2.0 for accessing cloud Storages like Box, One Drive, Google Drive, Drop box.
- Used Bootstrap and Media Queries in creating a responsive website across different sizes of screen, from cellphone to laptop.
- Creating IAM roles for each developer and admins to enhance the security.
- Tested the RESTful API using the Postman client for HTTP requests including GET, POST, and PUT.
- Used Core Java to implement server-side components, multi-threading, and web services using the Spring Framework.
- Used a variety of Spring capabilities, including Dependency Injection, IOC, and Annotations.
- Developed programs utilizing Design Patterns and linked to MySQL and Oracle databases with the JDBC API.
- Deployed application using JBOSS and used Jenkins as Continuous Integration (CI/CD) tool.
- Used JIRA to keep track of issues and bugs.
- Involved in creating JUnit based unit test cases using Mockito as the mocking framework for the objects under test.
- Using the Agile Process, engaged in iterative development.
- Used Maven as the building tool and involved in designing database schema changes and J2EE software upgrades to support new features.
- Hands-on experience on UNIX commands to view the production server's log files.

Environment: Java, Java EE6, Spring MVC, REST, Jersey, JMS, Hibernate 3.0, Spring3.2, Eclipse3.8, UML, HTML5, CSS3, JavaScript, AJAX, jQuery, JSON, AngularJS, Node.js, Bootstrap, WebLogic 11g application server, Log4j, Oracle 10g, JNDI, JUnit, Maven, log4j, SVN, Dreamweaver, Illustrator, Mockito.
