

Aishwarya Lingam

lingam.aishwarya@gmail.com | (234)-282-9764 | www.linkedin.com/in/aishwaryal3/

Software Quality Engineer with 6+ years of experience building scalable automation frameworks for enterprise systems. Specialized in designing end-to-end test architectures, API validation pipelines, CI/CD automation, and performance optimization for high-volume production environments.

EDUCATION

Kent State University

Master of Science, Business Analytics | GPA: 4.0/4.0

Jawaharlal Nehru Technological University

Bachelor of Technology

KENT, OH, US

December 2025

Hyderabad, India

May 2017

SKILLS

Languages: Java, JavaScript, SQL, TypeScript, Python, VBScript

Automation & Frameworks: Selenium (Java, TestNG), Cucumber BDD, Playwright, Cypress, REST Assured, UFT, Appium, Page Object Model (POM), Keyword-Driven Frameworks

API & Backend Testing: REST, SOAP (SoapUI), JSON/XML Validation, SQL Server Management Studio (SSMS), ETL Validation

CI/CD & DevOps: Jenkins, Git, GitHub, AWS, Linux, PuTTY, CI/CD Pipelines

Performance & Security Testing: JMeter, SonarQube, Veracode, WCAG/Section 508 Accessibility Testing

Test Management & Agile Tools: Jira, Zephyr, HP ALM, TestRail, Confluence, Agile, Scrum

AI-Assisted Development Tools: GitHub Copilot, Claude (Jira–Azure Integration)

Tools & Productivity: Microsoft Excel, Word, PowerPoint, Outlook, Azure DevOps

WORK EXPERIENCE

Far Reach

Associate Quality Assurance Engineer

Ohio, USA

February 2026 – Present

- Developed 10+ automated test scenarios using Selenium with Java and Cucumber BDD, increasing regression coverage by 20%
- Performed exploratory testing for 2+ builds after enhancements and deployments, ensuring release stability and reducing critical production defects by 15%
- Validated 15+ new feature enhancements to ensure seamless integration and performance optimization, reducing post-release issues by 20%.
- Reproduced and analyzed production issues through workflow and log tracing, reducing resolution time by 32%.
- Performed static code quality analysis using SonarQube, reducing critical code issues by 30%.
- Supported application security testing workflows aligned with Veracode standards, improving vulnerability detection coverage by 25%.
- Collaborated with developers and product owners to define test strategy and acceptance criteria, accelerating release readiness by 15%.
- Used Claude integrated with Jira via Azure to generate structured bug reports and user stories, reducing documentation time by 40%.
- Accelerated defect triage cycles by 25% through AI-assisted ticket clarity and formatting.
- Leveraged GitHub Copilot to develop 10+ automation scripts using Selenium and REST Assured, reducing scripting time by 35%.
- Improved automation development efficiency by 15% through AI-assisted code suggestions and refactoring.

Oracle India Private Limited

Senior Quality Assurance Analyst (Automation)

Hyderabad, India

September 2021 – March 2024

- Managed 350+ functional and regression tests in Zephyr, for Oracle EPCM, increasing test coverage by 25%.
- Validated end-to-end data migration using SQL and ETL checks, reducing data variance errors by 30%.
- Worked with cross-functional teams in a hybrid Agile environment to validate 20+ UI enhancements, improving release quality by 20%.
- Built a Cypress E2E automation framework using JavaScript and POM, reducing manual testing effort by 35%.
- Integrated automation suites into Jenkins CI/CD pipelines on AWS, reducing deployment validation time by 30%.
- Managed GitHub-based automation collaboration, reducing merge conflicts by 35% and enabling CI-triggered runs.
- Conducted performance testing with JMeter (500+ users), improving system performance by 20%.
- Performed accessibility testing using JAWS against WCAG/Section 508, increasing compliance coverage by 45%.
- Built 5+ Power BI dashboards analyzing revenue and cost leakage trends across 10+ financial streams, improving reporting accuracy by 30%.
- Delivered EPCM workflow knowledge transfer and documentation, reducing onboarding time by 40%.
- Automated build deployments to QA and OCI environments, reducing deployment time by 30%.
- Applied 20+ latest test builds using Linux command-line operations, reducing build validation time by 25%.
- Updated environment configurations in input property files using PuTTY for 20+ release cycles, reducing environment-related defects by 28%

Infosys Limited

Software Test Analyst (client: UnitedHealth Group (UHG))

Hyderabad, India

December 2019 – September 2021

- Performed smoke testing for 15+ production and QA builds, identifying critical defects early and reducing release rollback incidents by 30%
- Designed 250+ requirement-based test cases from BRD/FRD, improving defect prevention by 28%.
- Contributed to Agile Scrum ceremonies, clarifying acceptance criteria and accelerating sprint delivery by 15%.
- Managed test planning and execution in TestRail, increasing test coverage and improving defect resolution by 25%.

- Delivered 20+ weekly QA reports summarizing test results, defect trends, and business impact, improving stakeholder visibility by 35%.
- Developed and debugged Playwright automation scripts, improving execution efficiency by 18%.
- Built a scalable Playwright POM framework, improving cross-browser execution by 35% and reducing maintenance effort.
- Stabilized flaky automation tests using wait strategies and retries, reducing failures by 40%.
- Optimized Playwright execution by capturing screenshots only on failure, reducing storage usage by 60%.
- Generated HTML and Allure test reports, improving defect triage and traceability by 30%.
- Performed SOAP web service testing using SoapUI across 60+ service operations, validating XML payloads and WSDL schemas, improving API reliability by 25%

Infosys Limited

Software Test Engineer (client: Harley-Davidson ecommerce and financial services)

Hyderabad, India
April 2018 – November 2019

- Authored 200+ manual test cases across functional, integration, and E2E testing, increasing test coverage by 35%.
- Executed 300+ functional and regression test cycles, improving defect detection by 30% and accelerating QA sign-off.
- Logged 75+ defects in Jira with clear reproduction steps, improving resolution turnaround by 25%.
- Tracked sprint QA metrics in Jira and reduced defect leakage by 22% through early triage and Agile ceremonies.
- Reviewed 40+ requirements and design documents, ensuring 100% requirement-to-test traceability.
- Collaborated with development teams to design 15+ enhancement test scenarios, reducing rework by 30%.
- Designed and maintained Selenium (Java, TestNG) regression framework for 150+ scenarios, reducing test cycle time by 40%
- Automated 30+ REST API test cases using REST Assured with SQL backend validation, increasing API regression coverage by 45%
- Supported QA peers with framework setup and reviews, improving team productivity by 15% and strengthening security testing coverage.
- Implemented mobile automation using Appium for Android and iOS, increasing device coverage by 35%.
- Documented 50+ test plans, release notes, and QA processes in Confluence, improving knowledge visibility by 40% and reducing onboarding time for new team members by 25%

Idea Entity

Software Development Engineer in Test (Client: Bank of America (BOFA))

Hyderabad, India
July 2017 – April 2018

- Performed end-to-end testing of 5+ BOFA web application modules, improving overall release quality by 30%.
- Designed and executed 200+ detailed test scenarios aligned with BRD and FRD requirements, increasing functional coverage by 35%.
- Maintained requirement traceability matrices for 150+ requirements in HP ALM, reducing requirement gaps by 30%.
- Conducted cross-browser and cross-device testing across 10+ environments using Sauce Labs, reducing UI defects by 28%.
- Developed 100+ reusable keywords in a Keyword-Driven framework using UFT with VBScript, reducing regression effort by 65%.
- Executed Section 508 testing across 50+ UI screens using JAWS, achieving 95% compliance and reducing accessibility defects by 40%.
- Performed manual REST API testing for 75+ endpoints using Postman, improving early API defect detection by 30%.
- Performed JSON and XML validation for 35+ API responses, improving data accuracy by 30% and reducing integration defects by 30%.
- Validated 500+ transactional records using SQL queries in SQL Server Management Studio, reducing data-related defects by 32%.
- Participated in 20+ backlog and sprint meetings, reducing requirement gaps by 30% and improving sprint delivery by 25%.

PROJECTS

• Hired Hand – Hired Hand Live Platform

February 2026 – Present

Performed end-to-end quality validation of animal management workflows, including registration, breed tracking, and lifecycle records, ensuring data accuracy and business rule compliance. Improved regression coverage and reduced post-release defects through white-box API validation and cross-browser testing.

• Enterprise Profitability and Cost Management (EPCM)

Oracle, 2021

Configured and validated financial allocation models within Oracle EPCM, ensuring accurate profitability reporting and business rule execution. Automated data integrations and optimized financial processing performance, reducing reconciliation effort and improving reporting accuracy.

• Claims Auto-Adjudication & Member Portal Automation (UnitedHealth Group)

Infosys, 2019

Validated claims processing, eligibility checks, and member portal workflows to ensure accurate adjudication and regulatory compliance. Strengthened system reliability by improving test coverage and reducing error cycles through continuous validation and UAT collaboration.

• Harley-Davidson Financial Services & E-Commerce

Infosys, 2018

Tested and automated end-to-end e-commerce and financial workflows, including user registration, order processing, payment validation, loan approvals, EMI schedules, and POS integrations. Improved test coverage by 40%, reduced manual validation effort by 30%, and enhanced billing accuracy and financial data integrity across dealer-facing systems.

• Bank of America (BOFA)

Idea Entity, 2017

Tested core banking applications, including onboarding, funds transfer, ACH, and loan servicing, ensuring accurate UI flows and backend data updates. Designed 250+ BRD-driven test cases covering functional, regression, and integration scenarios. Automated key customer journeys using Playwright to validate login, payments, deposits, and transaction history across browsers. Performed REST/SOAP API checks for KYC, customer profile, and payment services to ensure reliable end-to-end processing.

AWARDS AND CERTIFICATIONS

- Oracle: Received the "Awesome Award" from the Director for identifying and raising 200+ bugs in the EPCM product.
- Infosys: Received Top Performer and Good Team Player awards for project delivery and automation contributions [\[Link\]](#).
- Oracle Cloud Infrastructure 2023 Certified Foundations Associate [\[Link\]](#)
- Tricentis Automation Specialist Level 1.
- Tricentis Automation Specialist Level 2.
